<p style="text-align: right;">16</p> <p>1 hearing called on a motion of the Commission to  2 consider the application of Summit Carbon Storage  3 #2, LLC, for an order of the Commission determining  4 the amount of financial responsibility for the  5 geologic storage of carbon dioxide from the Midwest  6 Carbon Express Pipeline.  7 Case Number 30876, in the matter of a  8 hearing called on a motion of the Commission to  9 consider establishing the field and pool limits for  10 lands located in Sections 27, 28, 29, 32, 33, 34  11 and 35, Township 143 North, Range 88 West, sections  12 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15,  13 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28,  14 29, 30, 32, 33, 34, 35 and 36, Township 142 North,  15 Range 38 West -- 88 West, Sections 5, 6, 7, 8, 17,  16 18, 19, 20, 29, 30 and 31, Township 142 North,  17 Range 87 West, Sections 1, 2, 3, Township 141  18 North, Range 88 West, Mercer and Oliver Counties,  19 North Dakota, subject to the application of Summit  20 Carbon Storage #2 for the geologic storage of  21 carbon dioxide in the Broom Creek Formation.  22 Case Number 30877, in the matter of a  23 hearing called on a motion of the Commission to  24 consider the application of Summit Carbon Storage  25 #3, LLC, requesting consideration for the geologic</p>	<p style="text-align: right;">18</p> <p>1 Township 142 North, Range 87 West, Sections 1, 2,  2 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16,  3 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29,  4 30, 32, 33 and 34 and 35, Township 142 North, Range  5 86 West, and Sections 6, 7, 17, 18, 19 and 20,  6 Township 142 North, Range 85 West, Oliver County,  7 North Dakota, subject to the application of Summit  8 Carbon Storage #3, LLC, for the geologic storage of  9 carbon dioxide in the Broom Creek Formation.  10 All interested parties please come  11 forward.  12 MR. BENDER: I made my appearance. Maybe  13 one more housekeeping matter, Mr. Examiner. As you  14 know, these applications are lengthy in terms of  15 how long it actually takes to get to the point  16 where they'd be put on the docket. Numerous  17 documents are filed with the Commission, both in  18 paper and electronically, and those all become part  19 of the record.  20 What we've done here today is we want to  21 focus on what we're going to refer to as the final  22 form of application, and that's -- what we have  23 done is we've provided a paper copy of that final  24 form to Sara as the official record. I know  25 everyone has it on their computers, so we didn't</p>

19

1 make a bunch of copies. I think the last time or  
 2 the time before I made a bunch of copies and I took  
 3 them back because no one wanted them. I did offer  
 4 a copy -- paper copy to Mr. Braaten. He indicated  
 5 that he was going to follow along on the computer.  
 6 The witness will have a paper copy to follow  
 7 through, and like I indicated, Sara will have the  
 8 official record.

9 What our plan is today, Mr. Examiner, in  
 10 addition to consolidating, what we're going to do  
 11 is spend some time going through in relatively  
 12 great detail the -- the application for the  
 13 Leingang storage unit. And after we go through  
 14 that in detail, there will be some testimony as to  
 15 the -- to the other storage units, the Fischer and  
 16 the Hintz, but for the most part we're going to go  
 17 through very carefully the Leingang application.

18 And after we finish that, we will then  
 19 call a witness who will summarize and compare the  
 20 differences between Leingang versus Fischer and  
 21 Hintz. We did that in the Minnkota application,  
 22 thought it worked pretty well, saved a lot of time  
 23 where hopefully we can do the same thing here.

24 HEARING EXAMINER GARNER: Okay.  
 25 MR. BENDER: And with that in mind, we

20

1 have two witnesses that we'd like to call: Wade  
 2 Boeshans and Jeff Skaare.

3 HEARING EXAMINER GARNER: Can you repeat  
 4 the first name?

5 MR. BENDER: Wade Boeshans,  
 6 B-o-e-s-h-a-n-s.

7 HEARING EXAMINER GARNER: And the next one  
 8 again.

9 MR. BENDER: And Jeff Skaare, S-k-a-a-r-e.  
 10 HEARING EXAMINER GARNER: Mr. Boeshans.

11 **WADE BOESHANS,**  
 12 being first duly sworn, was examined and testified  
 13 as follows:

14 **DIRECT EXAMINATION**  
 15 **BY MR. BENDER:**  
 16 Q. Wade, would you state your full name for  
 17 the record, please?  
 18 A. Wade Wayne Boeshans.  
 19 Q. And by whom are you employed?  
 20 A. Summit Carbon Solutions.  
 21 Q. In what capacity?  
 22 A. As executive vice president.  
 23 Q. Wade, what I'd like you to do to begin  
 24 with is briefly highlight for the examiner, the  
 25 Commission staff and opposing counsel your

21

1 educational background and work experience.  
 2 A. Sure. My education, I have a B.S. in  
 3 civil engineering from North Dakota State  
 4 University, as well as I've completed the executive  
 5 leadership program through the University of  
 6 Minnesota's Carlson School of Business.

7 My work background after graduating, I  
 8 started my career in consulting engineering and  
 9 residential development in Phoenix, Arizona. Came  
 10 back to North Dakota two years later and started my  
 11 career in the lignite coal industry near Beulah.

12 Worked around the country and Gulf Coast,  
 13 Powder River Basin. Came back to North Dakota  
 14 about 20 years ago and most recently was the  
 15 president and general manager of BNI Coal and BNI  
 16 Energy operating the mine up by Center and as a  
 17 subsidiary of ALLETE, a diversified energy company.

18 While I was there, it became very apparent  
 19 to me that for there to be a future in the lignite  
 20 energy, we were going to need a carbon solution,  
 21 and so I started investing a significant amount of  
 22 my time and energy working with other industry  
 23 leaders, research leaders to advance the science,  
 24 engineering and regulatory frameworks for  
 25 commercializing carbon capture and storage.

22

1 Q. Okay. Wade, let's talk a little bit about  
 2 some of your duties and responsibilities with  
 3 respect to your employment with Summit Carbon  
 4 Solutions.

5 A. Yeah. As executive vice president, I have  
 6 responsibility for the CO<sub>2</sub> sequestration, the scope  
 7 of Summit's project. I lead a team based here in  
 8 Bismarck that is responsible for, you know, the  
 9 engineering, design, permitting, ultimately  
 10 construction of the storage facilities.

11 Q. Okay. Now let's move into what you're  
 12 primarily here to talk about today and that's  
 13 the -- the project, and I'll refer to it as the  
 14 project summary. Can you provide us with some  
 15 background on Summit Carbon Solutions?

16 A. Yes. So Summit Carbon Solutions is a U.S.  
 17 company with U.S. roots that is committed to  
 18 driving economic growth and job growth in the  
 19 Midwest, reducing emissions and providing a  
 20 substantial boost to the agriculture and energy  
 21 industries that are critical to rural American  
 22 communities and the livelihoods of its citizens.  
 23 We believe we can fulfill those commitments through  
 24 carbon management solutions.

25 And so in 2021, the company announced its

23

1 partnership with ethanol plants to build out what  
 2 is now known as the Midwest Carbon Express system,  
 3 and in that partnership what we're proposing to do  
 4 is to capture CO<sub>2</sub> that's currently being emitted  
 5 into the atmosphere from those plants, transport it  
 6 to North Dakota via a pipeline system, and inject  
 7 it in the deep subsurface, approximately one mile  
 8 below the surface, for injection and -- and  
 9 permanent storage and sequestration.  
 10 Q. Okay. Wade, now I'd like you to turn your  
 11 attention to Exhibits 1A, 1B and 1C. Can you tell  
 12 me what those exhibits are?  
 13 A. Yes. So Exhibit 1A is the application in  
 14 final form for the Carbon Storage, LLC, #1 TB  
 15 Leingang permit application.  
 16 Q. And then what is Exhibit 1B?  
 17 A. It is the application in final form for  
 18 Summit Carbon Storage #2, geologic storage facility  
 19 permit for the BK Fischer.  
 20 Q. And what is Exhibit 1C?  
 21 A. It's the application in final form for the  
 22 KJ Hintz storage facility permit.  
 23 MR. BENDER: Move admission of these three  
 24 exhibits.  
 25 HEARING EXAMINER GARNER: Any objection?

24

1 MR. BRAATEN: Just a point of  
 2 clarification, if I may. I should have asked this  
 3 beforehand. But the exhibits that we're referring  
 4 to here that you're submitting are the same as the  
 5 applications on the case docket; right?  
 6 MR. BENDER: That's correct.  
 7 MR. BRAATEN: Okay. No -- I object to any  
 8 kind of hearsay, hearsay within hearsay,  
 9 unsupported statements that are contained within  
 10 the applications. To the extent we're marking and  
 11 admitting the applications just to have the  
 12 application in the record, I don't have an  
 13 objection to that.  
 14 HEARING EXAMINER GARNER: The objection is  
 15 noted. The exhibits are admitted.  
 16 MR. BENDER: Okay.  
 17 Q. (MR. BENDER CONTINUING) What I'd like you  
 18 to do, Wade, is let's turn to what's been  
 19 previously marked as Exhibit 2A, 2B and 2C, and  
 20 this is an exhibit we haven't handed out yet.  
 21 We'll do that right now.  
 22 Wade, can you briefly describe what these  
 23 exhibits are?  
 24 A. So these exhibits -- start with 2A -- is  
 25 an updated business structure that depicts, you

25

1 know, the SCS, LLC, #1 business structure as a  
 2 wholly owned subsidiary of Summit Carbon Storage.  
 3 Q. And was -- were these two exhibits  
 4 prepared either by you or under your control and  
 5 supervision?  
 6 A. Yes.  
 7 MR. BENDER: Offer the exhibits.  
 8 HEARING EXAMINER GARNER: Any objection?  
 9 MR. BRAATEN: No objection.  
 10 HEARING EXAMINER GARNER: Exhibits are  
 11 admitted.  
 12 Q. (MR. BENDER CONTINUING) Why don't you  
 13 spend a little time, Wade, just going through  
 14 Exhibits 2B and 2C and explain just what is being  
 15 requested?  
 16 A. Yes. So the exhibit reflects the business  
 17 structure, as I mentioned. At the bottom you see  
 18 the Summit Carbon Storage, LLC, #1, Summit Carbon  
 19 Storage, LLC, #2, and Summit Carbon Storage, LLC  
 20 [sic], which respectively are the owners and  
 21 operators of the TB Leingang storage facility, BK  
 22 Fischer storage facility and KJ Hintz storage  
 23 facilities. These are all wholly owned  
 24 subsidiaries of Summit Permanent Carbon Storage  
 25 LLC, which is a wholly owned subsidiary of Summit

26

1 Carbon Solutions.  
 2 Also you see on the diagram SCS Carbon  
 3 Transport which is the operator of the pipeline  
 4 system and will be the operator of the flowline  
 5 systems included in the three respective storage  
 6 facility permit applications. We will have  
 7 operating agreements between Summit Carbon Storage,  
 8 LLC, #1, #2 and #3 and Summit Carbon Transport --  
 9 or SCS Carbon Transport -- excuse me -- LLC.  
 10 Q. Okay. All right. Well, thank you for  
 11 describing Exhibits 2B and 2C. Let's now -- I'll  
 12 ask you the question again. What are each of these  
 13 applicants requesting?  
 14 A. They're each requesting commercial permits  
 15 for operations and injection of CO<sub>2</sub> and the  
 16 flexibility to receive CO<sub>2</sub> from a variety of  
 17 industrial sources.  
 18 Q. Okay. Now, you've touched on this, but  
 19 can you go into a little bit more detail in terms  
 20 of the purpose of the applications that are being  
 21 made by SCS1, SCS2 and SCS3?  
 22 A. Yeah. The purpose of the application is  
 23 to receive -- again, to receive commercial permits  
 24 to operate the TB Leingang storage facility, the BK  
 25 Fischer storage facility and the KJ Hintz storage

27

1 facility for the injection of CO<sub>2</sub>.

2 Q. And where is the CO<sub>2</sub> that these entities

3 are planning to store -- where is that coming from?

4 A. The CO<sub>2</sub> is coming from industrial sources

5 across five states in the upper Midwest: North

6 Dakota, South Dakota, Iowa, Nebraska and Minnesota.

7 Q. And I'd like you now to maybe explain just

8 in a little bit more detail the Midwest Carbon

9 Express project.

10 A. Yes. So the Midwest Carbon Express

11 project is an integrated carbon capture,

12 transportation and storage project that proposes to

13 capture CO<sub>2</sub> from industrial facilities across the

14 five-state footprint, transport that CO<sub>2</sub> to North

15 Dakota via a pipeline system where it will then be

16 injected and permanently stored.

17 Q. Okay. Why don't you go into a little bit

18 more detail in terms of after the CO<sub>2</sub> is captured

19 and it comes to North Dakota, what happens next?

20 A. So after the CO<sub>2</sub> is captured, it's

21 transported via a pipeline system. Essentially we

22 have smaller what I'll describe as lateral lines

23 connecting each one of the sources to a mainline

24 trunk line system, 24-inch line that will deliver

25 the CO<sub>2</sub> to North Dakota to the area of the storage

28

1 facilities in Oliver and Mercer Counties, where we

2 would then inject the CO<sub>2</sub> into the Broom Creek

3 Formation per these applications for permanent

4 storage.

5 Q. Now, Mr. Garner made it pretty clear that

6 today is not a PSC hearing. It's an Industrial

7 Commission hearing and we don't want to talk about

8 pipelines, but I think it might be appropriate just

9 for you to describe very, very briefly construction

10 of the pipeline.

11 A. Yes. As I mentioned, it's an integrated

12 pipeline system, about 2,500 miles. It will all be

13 designed, constructed and operated per PHMSA

14 standards. Have a minimum depth of pipe of 4 feet

15 to the top of pipe. All the pipe is high carbon --

16 or high-strength carbon steel. And the system will

17 be fitted with automatic valves and remote system

18 operations and operated through a control center

19 based in Ames, Iowa, and be monitored and operated

20 24/7.

21 Q. And what's the cost of the project?

22 A. It's about \$8 billion.

23 Q. And how does that -- how does this

24 project, what you're here today to discuss, compare

25 to other CO<sub>2</sub> sequestration projects?

29

1 A. So it's -- it's similar to the currently

2 operating Red Trail Energy ethanol carbon capture

3 project and the Blue Flint carbon capture ethanol

4 project up at Underwood. Similar to those in that

5 we're capturing -- planning to capture CO<sub>2</sub> primarily

6 from ethanol plants and -- and sequester it. The

7 difference being that this project has 57 plants so

8 it's much larger in scale and includes a longer

9 transportation system.

10 Q. And what does this project do in terms of

11 benefits to the U.S. economy?

12 A. So the ethanol industry in the U.S.

13 supports about 360,000 jobs and contributes about

14 45 billion annually to the U.S. GDP. Our project

15 which is proposing to connect with 57 ethanol

16 plants, those 57 plants produce about 5.7 billion

17 gallons of ethanol annually and consume about

18 1.7 billion bushels of corn that is produced on 30

19 million acres or about 30 million acres, so

20 significant to the regional economy and regional

21 corn market.

22 Additionally, we also have an agreement

23 with a sustainable aviation facility that's

24 proposed in South Dakota. And sustainable aviation

25 fuels are essentially making jet fuel out of corn.

30

1 Last year it was reported that 158 million gallons

2 of sustainable aviation fuels were delivered to the

3 airline industry globally. That same industry has

4 commitments for 3.3 billion gallons by 2030.

5 So that is a significant opportunity for

6 the corn producers and by extension the corn

7 markets which has a material impact on land prices

8 and commodity prices.

9 Q. Wade, I now want to direct your attention

10 to Exhibit 3A. I've had it circulated amongst the

11 Commission staff and opposing counsel. Can you

12 tell me what Exhibit 3A is?

13 A. It's the project overview map.

14 Q. Okay. And was this prepared by you or

15 under your control and supervision?

16 A. It was.

17 MR. BENDER: Offer the exhibit.

18 HEARING EXAMINER GARNER: Any objections?

19 MR. BRAATEN: No objection.

20 HEARING EXAMINER GARNER: Exhibit's

21 admitted.

22 Q. (MR. BENDER CONTINUING) Let's take a look

23 at Exhibit 3A, Wade. Can you briefly discuss

24 what's contained upon it and the importance of this

25 exhibit with respect to this hearing?

31

1     **A.** Sure. So the -- the exhibit is a project  
 2 overview map. All of the red squares on the map  
 3 are the approximate locations of the 57 ethanol  
 4 plants that are part of the project. And then in  
 5 the gray shaded area in North Dakota, you can see  
 6 the diamonds that reflect the approximate location  
 7 of the storage facilities that we're proposing to  
 8 permit. The significance of this exhibit is that  
 9 it revises the Figure PS-2 that's in the  
 10 application and revises the number of plants to 57  
 11 sources.

12     **Q.** So PS-2 would be in each one of the  
 13 exhibits, 1A, 1B and 1C; is that correct?

14     **A.** Yes. That's right.

15     **Q.** And this would, in essence, be updated  
 16 information to that particular page; is that  
 17 correct?

18     **A.** That's correct.

19     **Q.** Now, you spent some time discussing what  
 20 this project will do for the U.S. economy. Can you  
 21 tell us what it will do -- what the project will do  
 22 for the 57 ethanol plants that you just briefly  
 23 mentioned and that are depicted on your Exhibit 3A?

24     **A.** Yes. What the project does for the  
 25 ethanol plants is it allows them to lower their

32

1 carbon intensity score of the ethanol they produce  
 2 which then enables them to participate in emerging  
 3 low carbon fuels markets, both fuel transportation  
 4 and sustainable aviation fuels in the future.

5         And by doing so, in essence, the biggest  
 6 thing it does is it solves from a proximity  
 7 challenge, if you will, in that as you can see by  
 8 the diagram on Exhibit 3A, most of the ethanol  
 9 plants are situated on -- over the Corn Belt, which  
 10 the Corn Belt is not situated for most of the  
 11 plants over suitable geologic storage, and so  
 12 ultimately it connects -- provides an opportunity  
 13 for these plants to capture their CO<sub>2</sub>, lower their  
 14 CO -- their CI score -- excuse me -- and transport  
 15 their CO<sub>2</sub> to a suitable geologic storage basin here  
 16 in North Dakota.

17     **Q.** Now I'd like you to spend just a little  
 18 time explaining what benefits this project will  
 19 bring to the -- to North Dakota.

20     **A.** Sure. So --

21         MR. BRAATEN: I'm going to object, Your  
 22 Honor, to the extent this is being offered as any  
 23 kind of expert testimony without foundation about  
 24 any kind of economic or other benefits that would  
 25 require some sort of economist. If he's just

33

1 talking generally about what they believe the  
 2 benefits of the project are, I don't have that  
 3 objection.

4         HEARING EXAMINER GARNER: Overruled.

5     **Q.** (MR. BENDER CONTINUING) You can answer.

6     **A.** Yeah. So, you know, the North Dakota  
 7 economy or agriculture and energy represent about  
 8 70 percent of the North Dakota economy, and in  
 9 North Dakota, you know, we -- we produce a  
 10 significant volume of corn. The Red Trail --  
 11 excuse me, not the Red Trail -- the Tharaldson  
 12 Ethanol plant, which is part of our project,  
 13 consumes about 60 million bushels of corn a year.  
 14 We grow between 350 and 400 million corns -- or  
 15 bushels of corn per year. So the Tharaldson plant  
 16 alone consumes around 15 percent -- 15 to  
 17 20 percent of the corn that's produced in North  
 18 Dakota annually.

19         Additionally, the ethanol industry  
 20 consumes over half of North Dakota's corn. And so  
 21 these -- this project and its participants provide  
 22 material markets and market demand for corn that's  
 23 grown here in North Dakota.

24     **Q.** Okay. And these -- some of the CO<sub>2</sub> that's  
 25 going to go into your storage facilities that are

34

1 before the Commission today are going to be coming  
 2 from the Tharaldson Ethanol plant; is that correct?

3     **A.** Yes.

4     **Q.** And can you tell me where the Tharaldson  
 5 Ethanol plant gets its corn from?

6     **A.** According to my conversations with  
 7 Tharaldson, they have -- they purchase corn from  
 8 about a 150-mile radius around the Casselton plant  
 9 there.

10     **Q.** And how does the project, in your opinion,  
 11 benefit agricultural -- agriculture and energy in  
 12 the state of North Dakota?

13     **A.** It benefits agriculture and energy in  
 14 North Dakota in that it develops CCS  
 15 infrastructure, or specifically carbon pipeline  
 16 infrastructure, that is a common carrier system  
 17 that could be used for others. It commercially  
 18 deploys CCS in the state that again provides  
 19 support for others doing the same.

20     **Q.** And, in your opinion, is the project  
 21 good -- good for or will benefit regional corn  
 22 markets?

23     **A.** Yes. It provides significant demand for  
 24 regional corn.

25     **Q.** Let's talk a little bit about stream

35

1 composition. What I mean by that is what's the  
 2 composition of the CO<sub>2</sub> going to be? And perhaps we  
 3 could turn to Exhibit 1A and on page PS-3. Might  
 4 be easier for everyone to follow if we're looking  
 5 at that page.  
 6 Can you just briefly summarize what's  
 7 contained on that page?  
 8 **A.** Yes. So Table PS-1 on page PS-3 indicates  
 9 the CO<sub>2</sub> system specification. As you can see,  
 10 it's -- the system spec is greater than  
 11 98.25 percent CO<sub>2</sub> and then trace amounts of other  
 12 constituents listed on -- in the table, primarily  
 13 constituents of air, nitrogen, oxygen.  
 14 **Q.** Okay. And you talked briefly about  
 15 possibly down the road the project taking some CO<sub>2</sub>  
 16 from a sustained aviation fuel facility. What are  
 17 some of the considerations that Summit will have  
 18 with respect to the requirements for potentially  
 19 taking this additional CO<sub>2</sub> from nonethanol sources?  
 20 **A.** Yeah. So we are -- we have conservatively  
 21 designed the system and the -- again, within this  
 22 permit to greater than 95 percent CO<sub>2</sub>. And so as we  
 23 secure new sources, the requirements will be that  
 24 they are greater than 95 percent CO<sub>2</sub> at capture, and  
 25 when commingled and delivered to the sequestration

36

1 sites, greater than 98.25 percent CO<sub>2</sub>.  
 2 **Q.** And, Wade, is North Dakota a good place to  
 3 store or sequester CO<sub>2</sub>, and if so, why?  
 4 **A.** Yes, North Dakota has -- has ideal geology  
 5 for sequestration. We'll hear a lot from the rest  
 6 of the team here later about the geology. But  
 7 specifically North Dakota has, you know, extensive  
 8 sand layers that are surrounded by confining layers  
 9 that provide for -- that cover a large areal extent  
 10 and provide for suitable geologic reservoir for  
 11 storage.  
 12 **Q.** Wade, you sometimes hear concerns that  
 13 perhaps we shouldn't be storing CO<sub>2</sub> in the state of  
 14 North Dakota from other states because there is  
 15 this concern about whether there's an abundance of  
 16 storage space in North Dakota. Can you tell us a  
 17 little bit about what your understanding is of  
 18 that?  
 19 **MR. BRAATEN:** Object to foundation.  
 20 **HEARING EXAMINER GARNER:** Overruled.  
 21 **MR. BOESHANS:** Yes. The U.S. Geologic  
 22 Survey has recorded an estimated storage resource  
 23 in the Williston Basin of over 250 billion tons.  
 24 That would be the equivalent of storing all of the  
 25 CO<sub>2</sub> from all North Dakota industrial sources for

37

1 over 5,000 years. So it's a very prolific storage  
 2 resource.  
 3 **Q.** (MR. BENDER CONTINUING) Okay. Wade, I'm  
 4 going to direct your attention to Exhibit -- wait a  
 5 minute -- yeah. I'm going to direct your attention  
 6 back to Exhibit 1A and particularly page PS-5. Can  
 7 you provide us with an overview of the proposed  
 8 location?  
 9 **A.** Sure. As you see laid out in figure PS-3  
 10 on page PS-5 of Exhibit 1, you see the locations of  
 11 the storage facilities within Oliver and Mercer  
 12 Counties, and so you see that the BK Fischer site,  
 13 or SCS2 as the applicant, is located in Mercer  
 14 County; and then SCS1, the TB Leingang, is located  
 15 in Oliver County; and SCS3, the KJ Hintz storage  
 16 facility, is located in Oliver County as well.  
 17 **Q.** Do you believe this is a good area to  
 18 store CO<sub>2</sub>?  
 19 **A.** We do.  
 20 **MR. BRAATEN:** Object to foundation.  
 21 **HEARING EXAMINER GARNER:** Overruled.  
 22 **Q.** (MR. BENDER CONTINUING) How did Summit  
 23 select this project area and the injection sites?  
 24 **A.** So we looked at, you know, available  
 25 information, particularly mapping of sand

38

1 thicknesses, previous oil and gas and stratigraphic  
 2 well drilling information, ultimately identified an  
 3 area in -- that included, you know, Oliver, Mercer  
 4 and Morton Counties as a suitable target area for  
 5 CO<sub>2</sub> storage.  
 6 **Q.** Okay. And you talked about the storage  
 7 area, but what about -- how about the injection  
 8 sites? How did you select those?  
 9 **A.** So after we'd identified, you know, this  
 10 general area of the three counties, we then  
 11 identified a specific area within that. Based on  
 12 that information of about 170,000 acres, we  
 13 proceeded to secure permissions to do survey and  
 14 secure land rights and completed site-specific  
 15 characterization, including seismic survey on over  
 16 95 percent of roughly a 140,000-acre block within  
 17 that.  
 18 And then based on utilizing kind of that  
 19 information to build a -- engaged with the EERC to  
 20 build a geologic model, run simulations. And based  
 21 on the geology of the area as well as landowner  
 22 participation or cooperation for those who had  
 23 signed leases and then considering also surface  
 24 infrastructure, including roads, availability of  
 25 power, locations of dwellings, et cetera,

39

1 identified the specific injection sites and -- and

2 the storage boundaries came from that.

3 Q. Now, Wade, are there flowlines that are

4 associated with the injection wells? And if it's

5 easier to discuss that by looking at Exhibit 1A,

6 please do so.

7 A. Sure. Yes. I'm looking at Figure PS-3 on

8 page PS-5 in Exhibit 1A. You can see that there

9 are flowlines. You can see the mainline system

10 upon this diagram labeled NDM-106 comes into the --

11 to Oliver County. At that point there's a terminus

12 and then there's flowlines from that point out with

13 NDL-326 going to the KJ Hintz site, NDL-327

14 continuing to the west to the TB Leingang site, and

15 then NDL-325 going to the BK Fischer storage site.

16 Q. And in selecting this area, did Summit

17 give any consideration to other permitted projects

18 in the area?

19 A. We did.

20 Q. Okay. And perhaps I already handed it

21 out, but Exhibit 4A -- I show you what's been

22 marked Exhibit 4A. Can you tell me what that

23 exhibit is?

24 A. Yeah. So this is an exhibit that includes

25 the three Summit sites proposed in the application

40

1 here, three Summit storage facilities -- TB

2 Leingang, BK Fischer and KJ Hintz -- as well as the

3 already permitted Minnkota facilities, DCC West and

4 DCC East.

5 And what this -- what you see from that is

6 kind of the proximity between the storage

7 facilities with DCC facilities being closest to the

8 KJ Hintz site. It's approximately 11 miles from

9 the DCC West injection site to the KJ Hintz

10 injection site and about 19 miles from the DCC East

11 injection site to the KJ Hintz injection site.

12 Q. And it's -- I'm sorry. I interrupted you.

13 A. And the storage boundaries between DCC

14 West and KJ Hintz are approximately 3 miles apart.

15 Q. And is it a fair statement that you're

16 very familiar with both the permitted sites and the

17 proposed sites that you're here today to permit?

18 A. I am.

19 Q. And is it a fair statement that this

20 exhibit was prepared under your control and

21 supervision?

22 A. Yes.

23 Q. Okay.

24 MR. BENDER: Offer Exhibit 4A.

25 HEARING EXAMINER GARNER: Any objections?

41

1 MR. BRAATEN: Yeah. I object to

2 foundation.

3 HEARING EXAMINER GARNER: Overruled. The

4 exhibit is admitted.

5 Q. (MR. BENDER CONTINUING) Wade, you

6 indicated that Summit did consider impacts on other

7 permitted projects. Which permitted facilities did

8 Summit consider?

9 A. The DCC West and DCC East permits.

10 Q. Okay. And can you explain just a bit as

11 to what sort of considerations you gave to those

12 sites?

13 A. Yeah. So what you're seeing on the

14 exhibit indicates the extent of the CO<sub>2</sub> plumes of

15 each of the five sites operating at permitted

16 limits at the end of five years. And so as you can

17 see, the plumes do not go outside of the storage

18 areas at -- by the end of five years, which, of

19 course, is then our understanding that they're --

20 the Commission requires a reevaluation and

21 adjustments to the permit in a five-year

22 reevaluation period.

23 And so what this tells us is that there is

24 no risk. From this simulation it indicates the

25 plume boundaries are within the storage area at the

42

1 end of the -- end of five years and -- and the

2 renewal period, which then gives us the opportunity

3 to validate modeling assumptions and adjust

4 accordingly or present to the Commission proposed

5 amendments to the permits.

6 Q. And this shows what you believe will be

7 the plume extent after five years; is that correct?

8 A. That's correct.

9 Q. And you said the Commission will have an

10 opportunity to review these storage areas -- or the

11 storage units after five years; is that correct?

12 A. That's correct.

13 Q. Is it also your understanding that the

14 Commission has continuing jurisdiction, and if it

15 deems necessary, could review earlier than five

16 years?

17 A. Yes. That's correct.

18 Q. Okay. Now, Wade, in the past the

19 Commission has always requested information on an

20 NAICS industrial classification code.

21 A. Yes.

22 Q. Do you know what that is?

23 A. I do. It is NAICS code 486990, all other

24 pipeline transportation.

25 Q. Okay. And, in your opinion, is the

43

1 storage facility in the public interest?

2 **A.** Yes.

3 MR. BENDER: That's all the questions I

4 have for this witness, Mr. Examiner. We would like

5 to move to the next witness and then give the

6 Commission and opposing counsel an opportunity to

7 ask questions at that time so they can switch back

8 and forth without wasting time.

9 HEARING EXAMINER GARNER: I'm sorry, you'd

10 like to call your second witness before cross?

11 MR. BENDER: Yes. Yep.

12 HEARING EXAMINER GARNER: Any objections

13 to that?

14 MR. BRAATEN: No.

15 HEARING EXAMINER GARNER: Okay. You can

16 proceed. Mr. Skaare.

17 MR. BENDER: Skaare.

18 HEARING EXAMINER GARNER: Skaare. Sorry.

19 **JEFFREY SKAARE,**

20 being first duly sworn, was examined and testified

21 as follows:

22 **DIRECT EXAMINATION**

23 **BY MR. BENDER:**

24 Q. Jeff, state your full name for the record,

25 please.

44

1 **A.** Yeah. Jeffrey Skaare.

2 Q. And, Jeff, by whom are you employed?

3 **A.** Summit Carbon Solutions.

4 Q. In what capacity?

5 **A.** I am the director of land, legal and

6 regulatory affairs for sequestration.

7 Q. And I would like -- what I'd like you to

8 do next, Jeff, is I'd like you to briefly highlight

9 for the Commission staff and opposing counsel your

10 educational background and work experience.

11 **A.** Sure. I received a bachelor of science

12 degree in business administration from the

13 University of North Dakota in 1997. Went on to law

14 school at UND, received my juris doctorate degree

15 in 2000. I have spent the majority of my career

16 working in the oil and gas sector, primarily as a

17 landman throughout mostly the Williston Basin.

18 Q. Okay. And what are some of your duties

19 and responsibilities with respect to your

20 employment with Summit?

21 **A.** Yeah. My duties with respect to Summit

22 include essentially the pore space acquisition

23 efforts which included mineral and, you know,

24 surface title review; the document creation; the

25 negotiations; and, of course, some of the surface

45

1 facilities and flowline acquisitions throughout

2 that project.

3 Q. And you were also involved in the notice

4 requirement that is provided by statute prior to

5 holding this hearing; is that correct?

6 **A.** That is correct.

7 Q. And would you characterize those notice

8 requirements somewhat stringent?

9 **A.** They are.

10 Q. Okay. Can you describe what you did in

11 terms of identifying owners and then making sure

12 those owners were provided notice?

13 **A.** Certainly. So we started by doing a

14 complete surface and mineral title review of the

15 areas inside the storage facility permits and

16 within the one-half mile buffer outside of that

17 particular area to determine who the record owners

18 are.

19 Q. And were you specifically involved in

20 identifying those owners?

21 **A.** I was.

22 Q. Okay. But you had others who were working

23 under your control and supervision; is that

24 correct?

25 **A.** That is correct. I oversaw the team.

46

1 Q. Now, after you identified the individuals

2 that you were going to provide notice to, what did

3 you do next?

4 **A.** So consistent with North Dakota Century

5 Code, we provided notice to all within that inside

6 and one-half mile boundary, notice of the -- notice

7 to all the surface owners, to all the mineral

8 owners, to any mineral lessees within that same

9 boundary, and any owner or lessee of record as

10 well.

11 Q. And was that notice given by certified

12 mail return receipt requested?

13 **A.** It was.

14 Q. Okay. And what -- what information was

15 contained in that notice, Jeff?

16 **A.** So, again, also consistent, we included

17 the legal description of each of the storage

18 facilities; the date, time and location of the

19 hearing; notice that a copy of the permit

20 application was available through the NDIC. We

21 also included an explanation on how comments could

22 be submitted. And then, lastly, a notice that

23 amalgamation would be required.

24 Q. And you've indicated this was sent

25 certified mail return receipt; is that correct?

47

1     **A.** That is correct.

2     **Q.** And were all of the certified mailings

3 delivered? In other words, did you get a green

4 card back that was signed by the owner that you

5 sent the certified mailing to?

6     **A.** We did not.

7     **Q.** Okay. And what steps did you take with

8 respect to giving notice to those individuals who

9 did not receive notice and you knew they didn't

10 receive notice because the green card came back

11 unsigned?

12     **A.** Yeah. When we received something back, we

13 employed a third-party search to essentially

14 identify an updated address. And when an updated

15 address was obtained, we sent out a second notice.

16     **Q.** Okay. Were you also involved, Jeff, in

17 taking pore space leasing -- pore space leases --

18 excuse me -- for the storage permit facility area?

19     **A.** I was.

20     **Q.** And was all of that work done under your

21 control and supervision?

22     **A.** Yes, it was.

23     **Q.** Can you provide for us a brief summary of

24 that?

25     **A.** Gladly. So the process started by

48

1 identifying landowners through public court

2 records, essentially verifying title, creating the

3 documents necessary to engage with the landowners.

4 Next we -- we did engage with those landowners and

5 worked on any terms. And then we essentially moved

6 forward acquiring a lot of that pore space through

7 an option and a lease and as a result signed

8 approximately 90 percent of the landowners in the

9 SCS1/TB Leingang and approximately 92 percent of

10 the landowners in the SCS2, also known as the BK

11 Fischer. And then, lastly, in SCS -- and when I

12 say "SCS," I mean Summit Carbon Solutions #3 --

13 storage #3, LLC, and the KJ Hintz we acquired

14 approximately 97 percent.

15     **Q.** And having been involved in searching

16 title to provide notice and searching title to take

17 pore space leases, you would know if there was any

18 federal acreage in any of these proposed units; is

19 that a fair statement?

20     **A.** That is a fair statement.

21     **Q.** Is there any federal acreage in the

22 proposed units?

23     **A.** There is not.

24     **Q.** Is there any State acreage in the proposed

25 units?

49

1     **A.** Yes, there is.

2     **Q.** Okay. Can you tell us a little bit about

3 that? Where is it located and how much land are we

4 talking about?

5     **A.** Within each of the applications, there is

6 a single quarter of land that is under the control

7 and direction of the North Dakota Trust Lands. The

8 first one in the TB Leingang, also Summit Carbon

9 Storage #1, would be in Township 141, Range 88,

10 Section 36 in the southwest quarter.

11     In SCS2 in the BK Fischer, there's one

12 quarter in Township 143, Range 88, Section 32 in

13 the southwest. And then, lastly, in the KJ Hintz,

14 Township 143, Range 87, Section 36, the southwest

15 quarter.

16     **Q.** And has Summit secured an interest in the

17 pore space of the State lands?

18     **A.** We have not.

19     **Q.** Are you in the process of attempting to

20 acquire a pore space lease?

21     **A.** We are actively engaged in our discussions

22 with North Dakota Trust Lands.

23     **Q.** Okay. Let's talk a little bit more about

24 the fee owners. Can you very briefly discuss for

25 us the procedure or procedures that Summit utilized

50

1 under your control and supervision to secure pore

2 space leases from private owners?

3     **A.** Sure. So once we have -- as I testified

4 before determining title, we reached out both by

5 phone calls and having landmen setting up meetings

6 and meeting with specific landowners. Within the

7 unit, one of -- one more step that we took, I

8 guess, of multiple steps included after all of

9 those engagements when we had difficulty locating

10 somebody, we did send out a copy of the option and

11 pore space lease via certified mail. We did that

12 last fall in 2023. We did the same again via

13 certified mail to the unleased owners in just this

14 past spring of 2024.

15     In addition to that, we had sent out an

16 invitation to -- you know, prior to the hearing to

17 all of the landowners, surface owners within the

18 storage facility areas and within that half-mile

19 buffer to essentially two different informational

20 meetings. One was held in Beulah and the second

21 one was held in New Salem about a week apart to

22 accommodate for schedules. And while we were

23 there, we included a hard copy of the -- the pore

24 space -- the option and pore space lease to be

25 delivered directly.

51

1 And then, lastly, leading into these  
 2 hearings, this late spring, early summer I  
 3 personally took efforts wherein I was able to  
 4 locate a phone number to contact the landowners  
 5 that had not leased.  
 6 Q. Okay. And with respect to those owners  
 7 who have -- have not leased at this point in time,  
 8 are you requesting that the Commission amalgamate  
 9 those unleased interests; is that correct?  
 10 A. That is correct.  
 11 Q. And let's talk a little bit about -- I  
 12 think you testified that in TB Leingang you have  
 13 approximately 90 percent of the pore space leased;  
 14 is that correct?  
 15 A. Just a touch under 90. Yes. That is  
 16 correct.  
 17 Q. Okay. And what do you have with respect  
 18 to the BK Fischer?  
 19 A. The BK Fischer is approximately  
 20 92 percent.  
 21 Q. And the KJ Hintz?  
 22 A. The KJ Hintz is approximately 97 percent.  
 23 Q. And do you know what the requirement is in  
 24 terms of leased acreage within a storage area that  
 25 you need before the Commission can amalgamate the

52

1 remaining portion?  
 2 A. I do.  
 3 Q. What is that?  
 4 A. It is 60 percent.  
 5 Q. Okay. And you touched on this when you  
 6 discussed what you have been doing in terms of  
 7 securing leases from private pore space owners.  
 8 Now that you have those high percentages that you  
 9 testified to, have you just stopped leasing? Have  
 10 you taken the position, hey, this is -- we're well  
 11 over the 60 percent, we don't need to go out and  
 12 get any more leases?  
 13 A. No.  
 14 Q. Okay. What have you done?  
 15 A. We have continued to secure pore space  
 16 leases. The last one -- the most recent one signed  
 17 yesterday morning.  
 18 Q. All right. Let me switch gears now on  
 19 you, Jeff. Let's go to one of the exhibits.  
 20 Perhaps that's -- that's Exhibit 1A, I believe; is  
 21 that --  
 22 A. It is.  
 23 Q. Okay. And I'm going to have you turn in  
 24 to -- turn in that particular exhibit, 1A, to the  
 25 storage agreement.

53

1 A. I am there.  
 2 Q. Okay. And were you involved in drafting  
 3 that storage agreement?  
 4 A. I was.  
 5 Q. Okay. I'm going to have you go to  
 6 Exhibit A in that storage agreement. It's a little  
 7 confusing. We're in Exhibit 1A, but now we're  
 8 going to go to Exhibit A of the storage agreement  
 9 in 1A.  
 10 A. I am there.  
 11 Q. And can you tell me what Exhibit A is?  
 12 A. Yes. It is a tract map showing the  
 13 boundary of the storage facility area. In that map  
 14 you can see the townships, ranges and sections, and  
 15 in addition you will be able to see the tract  
 16 numbering system.  
 17 Q. Okay. And you would have a similar  
 18 storage agreement in a similar exhibit in each one  
 19 of the other storage units that's before the  
 20 Commission today, the Hintz and the -- I guess  
 21 that's the TB Leingang -- you'd also have one for  
 22 the Fischer and the Hintz; is that correct?  
 23 A. That is correct.  
 24 Q. Okay. Let's go to Exhibit B. Tell me  
 25 what Exhibit B is, of the storage agreement.

54

1 A. Sure. Tract B -- or excuse me --  
 2 Exhibit B, rather, is the -- the tract summary of  
 3 the -- the different owners within that previous  
 4 storage facility outline.  
 5 Q. And can you describe the tract  
 6 participation for each pore space owner?  
 7 A. Certainly. What you will see across this  
 8 document is, of course, the legal description, the  
 9 total acres, the owners, the acreage that they own,  
 10 which would then indicate their participation in  
 11 the tract itself, as well as that tract's  
 12 participation in the greater storage facility.  
 13 Q. And since -- since the application was  
 14 filed -- in fact, you mentioned a few moments ago  
 15 that you've secured additional leases as recently  
 16 as yesterday afternoon -- have you had an  
 17 opportunity to update the tract participation  
 18 summary which is Exhibit B in each one of the  
 19 storage units in the three applications?  
 20 A. Yes, we have.  
 21 Q. Okay. I'm going to show you what's been  
 22 previously marked as Exhibit 5A. I'll give you --  
 23 I'll just give it a minute till everybody has a  
 24 copy.  
 25 Okay. Jeff, let's turn to what's been

55

1 previously marked as Exhibit 5A, 5B and 5C. Can  
 2 you tell me what each one of those exhibits is?  
 3 **A.** It is a tract participation summary  
 4 similar to what we just discussed as the tract  
 5 summary, with the addition of the last column  
 6 furthest to the right showing the percentage of  
 7 acreage leased with a total leasehold on the final  
 8 page.  
 9 **Q.** Okay. And let's just go to 5A. I don't  
 10 think we need to go through each one of these, but  
 11 let's go to the last page of 5A. You talked about  
 12 it including an additional column. Does that  
 13 confirm what you previously testified to that  
 14 you -- that Summit has approximately 90 percent of  
 15 the area within that storage area leased?  
 16 **A.** That is correct.  
 17 **Q.** Okay. And then that's how the other two  
 18 exhibits would work as well, 5B and 5C, having that  
 19 additional column and indicating what the  
 20 percentage of leased acreage is?  
 21 **A.** That is correct.  
 22 **MR. BENDER:** Okay. We'd offer  
 23 Exhibits 5A, 5B and 5C.  
 24 **HEARING EXAMINER GARNER:** Any objection?  
 25 **MR. BRAATEN:** No objection.

56

1 **HEARING EXAMINER GARNER:** Exhibits are  
 2 admitted.  
 3 **Q.** (MR. BENDER CONTINUING) Let's go to  
 4 Exhibit D in Exhibit 1A. We've been discussing  
 5 Exhibit C, so that would be the next exhibit;  
 6 correct?  
 7 **A.** I believe we have not touched on  
 8 Exhibit C.  
 9 **Q.** We have not touched on what?  
 10 **A.** Exhibit C.  
 11 **Q.** All right. Well, we can -- I think we did  
 12 actually, but --  
 13 **A.** Okay.  
 14 **Q.** So I think you testified that it was the  
 15 tract participation schedule. But to make sure,  
 16 let's just go back very quickly to Exhibit C and  
 17 tell me what that is.  
 18 **A.** Sure. Much like Exhibit B, it is a bit  
 19 more of a summary showing the section of land that  
 20 is, you know, listed by tract with the acres of  
 21 that particular section and the total tract  
 22 participation. A bit more of a summary. Not to  
 23 confuse everybody. I just wanted to --  
 24 **Q.** No. No. That's fine.  
 25 **A.** -- make sure we're talking about the same

57

1 thing.  
 2 **Q.** I thought we touched on it, but perhaps we  
 3 did not.  
 4 **Let's go to D.**  
 5 **A.** I am there.  
 6 **Q.** Okay. And tell us what Exhibit D is.  
 7 **A.** Yes. Exhibit D is the Form of Pore Space  
 8 Lease that we used largely to acquire the  
 9 percentages we previously discussed.  
 10 **Q.** Okay. And will nonconsent -- well, let me  
 11 rephrase that. Will unleased owners be subject to  
 12 the provisions of Exhibit D?  
 13 **A.** Yes.  
 14 **Q.** Okay. And how does Summit propose to  
 15 compensate the unleased pore space owners that  
 16 appear in Exhibit D or ultimately do not lease?  
 17 **A.** Equally to the leased owners.  
 18 **Q.** Okay. And can you be a little bit more  
 19 specific in terms of what -- what that means? Is  
 20 there a bonus, is there a royalty? Can you -- and  
 21 without giving percentages or numbers because I  
 22 think we've made some promises to landowners that  
 23 we're not going to discuss that, so can you just  
 24 generally talk about what's going to be the same?  
 25 **A.** Yes. So under the terms of the pore space

58

1 lease, there is a bonus. That is the same bonus  
 2 that we pay to the existing leased owners, so  
 3 consistent with what you'll see in term -- or  
 4 Section 2(a). In addition we have a royalty that  
 5 is called out and that royalty is the same as well.  
 6 That royalty can be found in paragraph 3 of the  
 7 Form of Pore Space Lease.  
 8 **Q.** And it's based on the tonnage of  
 9 injection; is that correct?  
 10 **A.** That is correct.  
 11 **Q.** Okay. Let's go to Article 8 of the  
 12 storage agreement.  
 13 **A.** I am there.  
 14 **Q.** Okay. And I believe it was your testimony  
 15 that if the Commission grants the request for  
 16 amalgamation, this -- this storage -- well, yeah,  
 17 this storage agreement will be effective for those  
 18 owners; is that correct?  
 19 **A.** That is correct.  
 20 **Q.** Tell me how unleased owners will be  
 21 treated with respect to Article 8.  
 22 **A.** So consistent with our practices thus far,  
 23 we intend to specifically engage with willing  
 24 landowners and -- for any surface impact that may  
 25 exist and try our -- to minimize any impact that

59

1 may exist on any surface owner. As it stands  
 2 today, I do not believe we have any significant  
 3 surface use needs outside of what we have leased.  
 4 Q. Let me try to summarize that and you tell  
 5 me if this is correct. If you have unleased owners  
 6 in a storage unit now and the Commission  
 7 amalgamates those owners, you will do your level  
 8 best -- Summit will do its level best not to have  
 9 surface activities on those lands; is that a fair  
 10 statement?  
 11 A. That is a very fair statement.  
 12 Q. Okay. What types of activities is Summit  
 13 anticipating in terms of surface use within the  
 14 storage areas?  
 15 A. As of today, we have identified our  
 16 locations for injection and then --  
 17 Q. Let me stop you. I want you to talk about  
 18 just generally first and then you can talk about  
 19 where you are in terms of the process. I apologize  
 20 for interrupting you, Jeff --  
 21 A. No. That's okay.  
 22 Q. -- but why don't you talk about just  
 23 generally what type of surface use and then talk  
 24 about where you are in the process, the status.  
 25 A. Sure. Generally for surface use, we would

60

1 need, of course, our well site locations and the  
 2 flowlines.  
 3 Q. Perhaps some roads?  
 4 A. And perhaps some roads, yes.  
 5 Q. Okay. Now let's move to where Summit is  
 6 in that process.  
 7 A. Yes. Thank you. So we have identified  
 8 the location of our three injection wells, and we  
 9 have worked with those landowners regarding those  
 10 locations. We have secured 100 percent voluntary  
 11 easements for the location of the flowlines, and we  
 12 will continue to engage with the county as needed  
 13 regarding any particular road use.  
 14 Q. Okay. And with respect to well pads where  
 15 you have secured surface rights, were those -- were  
 16 those owners -- did they also lease pore space?  
 17 A. They did.  
 18 Q. Okay. And was that also the case where  
 19 you have secured easements for flowlines?  
 20 A. That is true.  
 21 Q. Okay. What was the approach that you took  
 22 in securing surface for easements for well pads,  
 23 flowlines, roads, that sort of thing?  
 24 A. Sure. We invited all the impacted  
 25 landowners into our office in Bismarck, sat down

61

1 with them and explained what we were doing and how  
 2 it worked. We gave them all an opportunity to ask  
 3 questions together. We met with some of them as a  
 4 group and some of them individually and came to  
 5 terms and signed all of those easements.  
 6 MR. BENDER: Thank you, Jeff. I don't  
 7 have any other questions at this time,  
 8 Mr. Examiner.  
 9 HEARING EXAMINER GARNER: Why don't we --  
 10 rather than move to cross, why don't we take a  
 11 ten-minute break at this point in time.  
 12 (Recessed at 10:08 a.m. and reconvened at  
 13 10:20 a.m.)  
 14 HEARING EXAMINER GARNER: Okay. We are  
 15 back on the record, and we will resume with  
 16 cross-examination of the witnesses by Attorney  
 17 Braaten.  
 18 MR. BRAATEN: Thank you. Your Honor.  
 19 **CROSS-EXAMINATION**  
 20 **BY MR. BRAATEN:**  
 21 Q. Why were the applications submitted by  
 22 Summit Carbon Solutions, LLC?  
 23 A. (BY MR. BOESHANS) Excuse me?  
 24 Q. Why were the applications submitted to the  
 25 North Dakota Industrial Commission by Summit Carbon

62

1 Solutions, LLC?  
 2 A. So Summit Carbon Solutions, LLC, is the  
 3 parent to Summit Permanent Carbon Storage and the  
 4 parent -- who is then the parent to or owner of  
 5 Summit Carbon LLC #1, 2 and 3.  
 6 Q. And so Summit Carbon Solutions submitted  
 7 the three applications on behalf of the Summit  
 8 Carbon Storage #1, LLC, Summit Carbon Storage #2,  
 9 LLC, and Summit Carbon Storage #3, LLC?  
 10 A. No. I believe the applicant is -- or the  
 11 applicant is Summit Carbon Storage #1, LLC, #2,  
 12 LLC, and #3, LLC; correct.  
 13 Q. So why did the applications get submitted  
 14 by Summit Carbon Solutions, LLC?  
 15 MR. BENDER: What do you mean by  
 16 "submitted"? I'm not trying to argue with you,  
 17 but --  
 18 Q. (MR. BRAATEN CONTINUING) Filed with the  
 19 NDIC.  
 20 A. Just that they were -- Summit Carbon  
 21 Solutions is the parent to Summit Carbon Storage --  
 22 excuse me -- yeah, Summit Carbon Storage, LLC, #1,  
 23 #2 and #3.  
 24 Q. Okay. You talked a little bit about  
 25 industrial sources for the CO<sub>2</sub> coming in the state

63

1 and there was a discussion of ethanol plants and an  
 2 aviation facility. Is there anything else that is  
 3 connecting or are there any other sources  
 4 connecting to the system that you didn't discuss?  
 5 **A.** Not at this time.  
 6 **Q.** Okay. Do you have any plans to connect  
 7 other sources to the system at this time?  
 8 **A.** We've had commercial discussions with  
 9 others, but no -- no affirmative plans, if you  
 10 will, or agreements.  
 11 **Q.** Are those discussions all with facilities  
 12 that would have a CO<sub>2</sub> stream within the parameters  
 13 you said in your application?  
 14 **A.** So I'm not the chief commercial officer so  
 15 I can't speak to the specifics of -- on the CO<sub>2</sub>  
 16 stream characteristics of all potential sources  
 17 that we've had commercial discussions with, but --  
 18 but per the application, they would be required to  
 19 be within that specification.  
 20 **Q.** Okay. Would you agree with the statement  
 21 that North Dakota has a huge economic advantage  
 22 because our geology is such that we can do storage  
 23 in pore space in North Dakota where other states  
 24 can't?  
 25 **A.** I can't testify to the, quote, magnitude

64

1 of the advantage, but I would agree that being  
 2 located on top of suitable storage is an advantage.  
 3 **Q.** And so would you agree that Red Trail  
 4 Energy as an ethanol plant has an economic  
 5 advantage by being able to sequester its own CO<sub>2</sub>  
 6 emissions directly beneath the earth under its  
 7 facility?  
 8 **A.** Yeah. Again, I can't testify to the  
 9 specific economics of Red Trail Energy and what  
 10 their operating and production costs are, et  
 11 cetera, et cetera, but certainly being located on  
 12 top of geologic storage is advantageous to them, I  
 13 would believe.  
 14 **Q.** Does your project sell that advantage to  
 15 ethanol plants in other states?  
 16 **A.** Can you restate that?  
 17 **Q.** Does your project sell that advantage to  
 18 ethanol plants in other states?  
 19 **A.** I don't believe so.  
 20 **Q.** Do they obtain an advantage by being able  
 21 to inject their CO<sub>2</sub>?  
 22 **A.** Being able to connect to our system and by  
 23 extension store their CO<sub>2</sub>, they're able to lower  
 24 their CI score, yes, and then that creates an  
 25 advantage for them or benefit to them.

65

1 **Q.** And that takes away the advantage North  
 2 Dakota ethanol plants would have if they were the  
 3 only ones doing sequestration of their CO<sub>2</sub>?  
 4 **A.** I don't believe so.  
 5 **Q.** How -- how is that?  
 6 **A.** Well, I don't believe that the North  
 7 Dakota plants can support -- given their size can  
 8 support a greater than 1-billion-gallon market.  
 9 **Q.** So they would find themselves in a system,  
 10 in a market with a massive demand and a low supply?  
 11 **A.** I -- I would say that it's -- there likely  
 12 wouldn't be enough supply to support the market.  
 13 **Q.** Do you think that that supply could then  
 14 be filled by development of other projects?  
 15 **A.** Potentially.  
 16 **Q.** Do you think that other projects would  
 17 have an advantage if they were able to sequester CO<sub>2</sub>  
 18 directly underneath their facility?  
 19 **A.** They may have.  
 20 **Q.** All of the ethanol plants connected to  
 21 your system but one are from outside of North  
 22 Dakota?  
 23 **A.** Currently, yes.  
 24 **Q.** You testified regarding what has been  
 25 marked as Exhibit 4A. Do you have a copy of that

66

1 in front of you still?  
 2 **A.** I do.  
 3 **Q.** You indicated that this was prepared under  
 4 your direction and control?  
 5 **A.** Correct.  
 6 **Q.** Who prepared it?  
 7 **A.** The Energy & Environmental Research  
 8 Center.  
 9 **Q.** And who at the Energy & Environmental  
 10 Research Center prepared it?  
 11 **A.** I don't know specifically who.  
 12 **Q.** How did you direct them if you don't know  
 13 who they are?  
 14 **A.** I directed the project lead at the EERC to  
 15 prepare this exhibit, but I don't know exactly  
 16 which one of the EERC experts did the work.  
 17 **Q.** Who is the project lead at EERC?  
 18 **A.** That would be Amanda.  
 19 **Q.** Amanda who?  
 20 **A.** Amanda -- excuse me -- Amanda Douglas.  
 21 **Q.** How long has Amanda Douglas been working  
 22 on the project?  
 23 **A.** She's been involved in the project since  
 24 we started developing the project in late 2021.  
 25 **Q.** How did Amanda's team determine where to

67

1 put the lines on this particular map for this

2 exhibit?

3 **A.** Amanda will have to testify to that.

4 **Q.** Well, but you directed her to create this

5 exhibit for you; right?

6 **A.** I did. Correct.

7 **Q.** What did you ask her to put on the

8 exhibit?

9 **A.** I asked her to put on the exhibit the

10 plume extent after five years of injection and the

11 other -- the storage boundaries, et cetera.

12 **Q.** Okay. Do you have an understanding of how

13 the plume extent at five years was calculated and

14 then put onto this map as a line?

15 **A.** Say that one more time.

16 **Q.** I think I can. Do you have an

17 understanding of how the plume extent at five years

18 was calculated and then put on this map as a line?

19 **A.** Yes. It's my understanding that the plume

20 extent was calculated using dynamic model

21 simulation to determine the extent.

22 **Q.** Would it be fair to say that you wouldn't

23 have any independent information of your own as to

24 where the line should be drawn to indicate the CO<sub>2</sub>

25 extent at five years of injection?

68

1 **A.** That I wouldn't have any independent --

2 **Q.** I'm not trying to be tricky. Let me be

3 basic here. You asked Amanda to put the lines on

4 here, but you don't know how she created these

5 lines or where the data comes from to determine

6 that that's where the line should go?

7 **Q.** So let me ask a better question. That

8 wasn't fair. That's just what I'm trying to get

9 at, though.

10 **A.** Okay.

11 **Q.** So as far as where the plume extent is on

12 this exhibit, you would have to rely on Amanda in

13 order to determine whether that's accurate; is that

14 fair?

15 **A.** That's correct. I would have to -- I

16 would have to rely on, you know, the geoscience

17 team and reservoir engineers at EERC that ran the

18 model to produce the plume extent.

19 **Q.** Okay. And so other than what you

20 testified to that this Exhibit 4A represents, in

21 order to understand where all of the information

22 came from and how the decisions were made as to

23 where to put the lines, we would have to talk to

24 EERC about the models they ran?

25 **A.** Yes. To understand the process, if you

69

1 will, and the modeling that produces the lines, the

2 EERC geoscience team would be the experts.

3 **Q.** Does Summit Carbon Solutions, LLC, have a

4 contract with the EERC for that work?

5 **A.** It does.

6 **Q.** And does the EERC have a contract with any

7 of the Summit or SCS entities listed on

8 Exhibits 2A, 2B or 2C other than Summit Carbon

9 Solutions, LLC?

10 **A.** I don't believe so.

11 **Q.** To your knowledge, does EERC have a

12 contract -- well, let me back up.

13 **Q.** Are you aware of any contracts EERC has

14 with private parties that relate specifically to

15 the project that we are here today for?

16 **A.** Specific parties related -- can you

17 specify which parties or --

18 **Q.** With anyone. But do you know if EERC has

19 contracts with any private parties, other than the

20 one you just mentioned with Summit Carbon

21 Solutions, that relate to this subject matter and

22 this Summit project that brings us here today?

23 **A.** I'm aware that they also have contracts

24 with Minnkota, but it's not related to this

25 project.

70

1 **Q.** Okay. Yeah. So, no, just related to this

2 project, are you aware of EERC having contracts

3 with other parties other than Summit for the

4 purposes of working on or related to this Summit

5 project?

6 **A.** I'm not.

7 **Q.** Okay. Is the EERC a State-funded

8 institution?

9 **A.** I'm not sure how the EERC is funded. I

10 know they're part of the University of North

11 Dakota, but in terms of how they're funded, I'm not

12 aware.

13 **Q.** Do they regularly take on work producing

14 applications for industry clients to get permits

15 for new projects?

16 **A.** Yes. That's my understanding.

17 **Q.** What other projects are you aware of them

18 doing that for?

19 **A.** I'm aware of them doing that for the

20 Minnkota projects, the DCC projects. I'm also

21 aware that they did work on the Red Trail project.

22 **Q.** Okay. So outside of the few carbon

23 sequestration projects that have occurred in North

24 Dakota in the last five or so years, are you aware

25 of EERC ever helping industry participants with

71

1 applications to get permits for new projects?

2 **A.** I'm not aware of their role in projects,

3 you know, outside of North Dakota for sure.

4 **Q.** But are you aware of them contracting with

5 and helping industry participants with applications

6 for permits for new projects outside of carbon

7 sequestration?

8 **A.** I am not.

9 **Q.** Okay. Does the contract signed between

10 Summit Carbon Solutions, LLC, and EERC in 2021

11 cover the scope of all work that EERC has done for

12 Summit on this project?

13 **A.** No. We have multiple contracts with the

14 EERC.

15 **Q.** Okay. How many contracts does Summit or

16 its affiliates and subsidiaries have with the EERC

17 related to the project we're here for today?

18 **A.** Today we have, I believe, one active --

19 active contract.

20 **Q.** Okay. How many contracts have you had

21 since you signed -- and when I say "you," I'm

22 referring to Summit Carbon Solutions, LLC, its

23 affiliates and subsidiaries. How many contracts

24 have you had since you signed the first contract

25 with EERC for this project?

72

1 **A.** I believe we had four --

2 **Q.** Okay.

3 **A.** -- separate.

4 **Q.** And did the four contracts cover different

5 subject matter or scope of work or were they

6 renewals of the same contract?

7 **A.** It was all similar subject matter,

8 slightly different scopes.

9 **Q.** Did Summit Carbon Solutions, LLC, or its

10 affiliates or subsidiaries get bids or proposals

11 from any institutions or consulting firms other

12 than EERC for the work it eventually contracted to

13 EERC?

14 **A.** Not that I'm aware of.

15 **Q.** How do you know whether the expense or

16 charges from EERC are competitive with other

17 providers?

18 **MR. BENDER:** Objection. Relevance.

19 **HEARING EXAMINER GARNER:** Overruled.

20 **MR. BOESHANS:** I would just say from the

21 Summit perspective, we've engaged lots of different

22 advisors across a broad scale of our scope, and so

23 what we do is we look at rates comparable to what

24 others would do for similar types of work on other

25 scopes of the overall project, and that's how we

73

1 judge competitive or not.

2 **Q.** (MR. BRAATEN CONTINUING) Okay. Right.

3 But you just said that with respect to the work

4 EERC did for you. You didn't actually get any bids

5 or scope out any other competitors to do that work;

6 right?

7 **A.** We did.

8 **Q.** You did?

9 **A.** No. Excuse me. We did not. That's what

10 I said.

11 **Q.** So how do you know if EERC's rates were

12 competitive?

13 **A.** Again, as -- as I stated, we look at

14 similar proposals for similar types of work,

15 permitting, engineering, modeling, those kinds of

16 things on the project overall and that's our best

17 comparison.

18 **Q.** So did you compare the work you were

19 asking EERC to do with estimates or proposals from

20 other institutions or consulting firms who could

21 have done the work?

22 **A.** So if your question is did we

23 competitively bid this specific work, the answer

24 would be no, we did not get proposals from -- for

25 the exact scope of work or request for proposal.

74

1 **Q.** Okay. Are you testifying that you did

2 nonetheless generally look at rates for similar

3 types of work as part of that process or did you

4 just choose to go with the EERC regardless of

5 whether their rates were competitive?

6 **A.** We, again, looked at comparables to others

7 to do, you know, professional work and the same --

8 not the exact same type of work but what I would

9 describe as similar work, and we accepted their

10 proposal.

11 **Q.** Okay. Is the amount charged by EERC more

12 or less than what you saw in the similar types of

13 rates that would be charged for work by other

14 firms?

15 **A.** I don't recall specifically. I would say

16 it was similar in nature from looking at hourly

17 rates perspective.

18 **Q.** And does Summit actually compensate EERC

19 under the contract for the work that they're doing?

20 **A.** If your question is do we pay them for

21 their services, yes.

22 **Q.** Are you familiar with the contract Summit

23 has with private engineering and consulting firms?

24 **A.** Generally.

25 **Q.** Are there any provisions in the EERC

75

1 contracts that allow them to do things like use  
 2 your data for research and education purposes?  
 3 **A.** I don't recall specifically. I don't  
 4 recall those provisions.  
 5 **Q.** Do you have copies of those contracts?  
 6 **A.** We do.  
 7 **Q.** Is there anyone testifying today that  
 8 knows the provisions of those agreements?  
 9 **A.** Not that I'm aware of. It's possible, but  
 10 I don't -- I don't -- I can't say for sure.  
 11 **Q.** Does your contract with EERC require them  
 12 to maintain your data in a confidential manner?  
 13 **A.** It does.  
 14 **Q.** How does that work with a public  
 15 institution subject to open records requests?  
 16 **A.** That would --  
 17 **MR. BENDER:** If you know, Wade.  
 18 **MR. BOESHANS:** Yeah, I don't know for  
 19 sure, but, again, that's a better question for the  
 20 EERC.  
 21 **Q.** (MR. BRAATEN CONTINUING) Are you having  
 22 the EERC testify in support of your application?  
 23 **A.** We are.  
 24 **Q.** You made some comments about the NAICS  
 25 industrial classification code. Can you tell me

76

1 again what you were saying about that?  
 2 **A.** I was saying that this was the  
 3 classification code.  
 4 **Q.** According to whom?  
 5 **A.** What's that?  
 6 **Q.** According to whom?  
 7 **A.** According to how it's been, I guess,  
 8 classified based on the type of the system it is.  
 9 **Q.** By whom?  
 10 **MR. BOESHANS:** Jeff.  
 11 **A.** (BY MR. SKAARE) Yeah, I don't recall --  
 12 what was the acronym again? Can you -- what was  
 13 the acronym for the code? I think we have it  
 14 somewhere.  
 15 **Q.** NAICS industrial classification code.  
 16 **A.** I don't have the answer for you. I'm  
 17 sorry.  
 18 **Q.** 486990 was the number you guys gave. You  
 19 knew that much; right?  
 20 **A.** We did.  
 21 **Q.** What's that number for?  
 22 **A.** I'm not sure I'm the appropriate person to  
 23 answer that question, but we can --  
 24 **Q.** Well, who -- who knew -- well, let me ask  
 25 the question again. What is the NAICS industrial

77

1 classification code you claim applies to the  
 2 storage facilities?  
 3 **A.** (BY MR. BOESHANS) I can't answer that  
 4 question.  
 5 **Q.** But you did.  
 6 **A.** No. I stated this is what the  
 7 classification code is. We'll have --  
 8 **Q.** But you don't know if it is?  
 9 **A.** I can confirm that Jay Volk, who will be  
 10 testifying here later today who works under my  
 11 direction, made that determination along with our  
 12 counsel, and he can testify specifically to that  
 13 question.  
 14 **Q.** What's his name?  
 15 **A.** Jay.  
 16 **Q.** Jay.  
 17 Did he make the determination that 486990  
 18 is the NAICS industrial classification code?  
 19 **A.** Yes. That's my understanding.  
 20 **Q.** Do you have any understanding of why?  
 21 **A.** I do not.  
 22 **Q.** Is it because that refers -- well, how  
 23 would you describe the facility that you're saying  
 24 has classification code 486990? What is it?  
 25 **A.** How would I describe the facility?

78

1 **Q.** Yeah.  
 2 **A.** It's a storage facility.  
 3 **Q.** Is it a coal pipeline transportation  
 4 facility?  
 5 **A.** No, it's not a coal pipeline. I believe  
 6 it falls in the "other" category.  
 7 **Q.** Is it a slurry pipeline transportation?  
 8 **A.** It is not.  
 9 **Q.** Is it pipeline transportation except crude  
 10 oil, natural gas, refined petroleum products?  
 11 **A.** Say that again.  
 12 **Q.** Pipeline transportation except crude oil,  
 13 natural gas -- natural gas, refined petroleum  
 14 products?  
 15 **A.** That sounds correct.  
 16 **Q.** Your storage facility is for pipeline  
 17 transportation?  
 18 **MR. BENDER:** Mr. Examiner, you know, we  
 19 can continue to waste time asking these questions.  
 20 We've identified another person who may be able to  
 21 help us with this, so --  
 22 **MR. BRAATEN:** He testified to this already  
 23 and only upon cross-exam is it being discovered  
 24 that he doesn't know that much about it, but I  
 25 think I'm entitled to exhaust my questions given

79

1 that this was a very specific code that they  
 2 brought up on direct and said is the code, and I'm  
 3 just asking why it is.  
 4 HEARING EXAMINER GARNER: Overruled.  
 5 Q. (MR. BRAATEN CONTINUING) So you think  
 6 pipeline transportation except crude oil, natural  
 7 gas and refined petroleum products is an accurate  
 8 description of your carbon sequestration facility?  
 9 A. Yes. That's my understanding based on  
 10 the -- the advice of our team.  
 11 Q. Are you going to store the CO<sub>2</sub> in a  
 12 pipeline underground?  
 13 A. We are not. We are going to transport it  
 14 to the site.  
 15 Q. And then you're going to transport it out  
 16 of a pipeline and into a wellbore; right?  
 17 A. Yes. It will -- from the pipeline it goes  
 18 to the wellhead and then into a wellbore.  
 19 Q. And then into the reservoir?  
 20 A. Correct.  
 21 Q. Where is the pipeline in the reservoir?  
 22 A. There is no pipeline in the reservoir.  
 23 Q. Then why would you call a storage facility  
 24 in the reservoir a pipeline?  
 25 A. Based on the, again, advice of our team,

80

1 we believe that's the appropriate -- the  
 2 appropriate classification.  
 3 Q. Well, but not because it's an accurate  
 4 description of the facility; right?  
 5 A. It describes it as "all other."  
 6 Q. What describes what as "all other"?  
 7 A. The classification, as I understand it.  
 8 Q. 486990 is for "all other"?  
 9 A. Yes. That's my understanding.  
 10 Q. There was some discussion earlier about  
 11 how there are PSC hearings going on regarding the  
 12 Midwest Carbon Express; do you recall that?  
 13 A. I do.  
 14 Q. Is the Midwest Carbon Express the same as  
 15 the storage facility that we're here talking about  
 16 today?  
 17 A. It's not the same.  
 18 Q. It's a different project; right?  
 19 A. Well, no, the Midwest Carbon Express --  
 20 excuse me. Let me restate that.  
 21 The Midwest Carbon Express is the -- is  
 22 the pipeline. This is the storage facility that's  
 23 part of -- the storage component of the Midwest  
 24 Carbon Express project, if you will.  
 25 Q. What is the Midwest Carbon Express

81

1 project?  
 2 A. So the Midwest Carbon Express project, as  
 3 I understand it, is the combination of capturing of  
 4 CO<sub>2</sub> at the plants, transporting the CO<sub>2</sub> via the  
 5 pipeline and storing the CO<sub>2</sub> at the injection  
 6 facilities that we're permitting here today or the  
 7 storage facilities -- excuse me -- that we're  
 8 permitting here today.  
 9 Q. Where does the Midwest Carbon Express  
 10 pipeline end?  
 11 A. The -- you said where does the Midwest  
 12 Carbon Express Pipeline end?  
 13 Q. Yes.  
 14 A. It's -- you know, back to the exhibit that  
 15 shows the terminus of the pipeline.  
 16 Q. Can you direct me to the -- or you're on  
 17 one of the marked exhibits?  
 18 A. Yes. Oh, excuse me. It's in Exhibit 1.  
 19 MR. BENDER: 1A.  
 20 MR. BOESHANS: Exhibit 1A. Yes. If you  
 21 refer to page PS-5, Figure PS-3, the red box  
 22 indicates the terminus of the Midwest Carbon  
 23 Express Pipeline. That's the end of the line.  
 24 Q. (MR. BRAATEN CONTINUING) With respect to  
 25 the applications under consideration today, does

82

1 the subject matter for those applications all begin  
 2 where that pipeline ends?  
 3 A. It does.  
 4 Q. And so when we're talking about an  
 5 industrial classification that's applicable to  
 6 these three sequestration facilities that we see on  
 7 PS-5, it would not be accurate to classify those as  
 8 a pipeline, would it?  
 9 A. I don't agree with that. There's --  
 10 there's a flowline and the injection facilities  
 11 that are all part of this application.  
 12 Q. So the flowlines. Anything else that you  
 13 would consider a pipeline that begins after the  
 14 terminus of the Midwest Carbon Express Pipeline?  
 15 A. Okay. Anything else that I would consider  
 16 a pipeline?  
 17 Q. Right.  
 18 A. No.  
 19 Q. Going back to Exhibit 1, PS-5, the diagram  
 20 you noted, there's a terminus point for the Midwest  
 21 Carbon Express Pipeline?  
 22 A. Yes.  
 23 Q. Are there any booster pumping stations  
 24 after that terminus point?  
 25 A. There are.

83

1 Q. Where are those?

2 A. At the well pads.

3 Q. Okay. Is there a valve station at the

4 terminus point?

5 A. Yes, there is.

6 Q. Where is that valve station operated from?

7 A. The -- all the valves will have the

8 ability to be operated from the main control center

9 and/or backup control center. Current plans for

10 the main control center are in Ames, Iowa. They're

11 also capable of being operated manually in the

12 field.

13 Q. You had indicated there was no federal

14 acreage within the sequestration areas. Was that a

15 criteria used in the search in order to avoid

16 federal acreage?

17 A. (BY MR. SKAARE) It was not.

18 Q. Okay. You had indicated you signed pore

19 space leases yesterday. Was that with individual

20 landowners?

21 A. It was.

22 Q. You're asking the Commission after this

23 hearing to amalgamate all unleased property owners;

24 is that right?

25 A. That is right.

84

1 Q. If you've not reached a deal with the

2 North Dakota Department of Trust Lands for the

3 State-owned lands, are you asking the Commission to

4 also amalgamate the State-owned lands administered

5 by the Department of Trust Lands?

6 A. So we've -- well, I can answer that

7 question this way: Zack Pelham, who has been busy

8 with a number of different hearings, has been

9 appointed to assist the North Dakota Department of

10 Trust Lands. We have agreed on the substantive

11 lease -- or easement agreement, and we're

12 anticipating the ability to complete that shortly.

13 It just wasn't capable of being done prior to this

14 hearing.

15 Q. Have you come to an agreement on

16 compensation?

17 A. I would say we've covered all substantive

18 issues including compensation.

19 Q. What do you mean by you've covered the

20 issue of compensation?

21 A. Sure. So the State of North Dakota Trust

22 Lands, of course, is an easement agreement rather

23 than a -- for pore space rather than a pore space

24 lease. We have presented and worked through a

25 number of terms, including our compensation offers

85

1 that are consistent with the existing leased

2 landowners and have received no pushback regarding

3 those terms. We're working through the remaining

4 terms on that agreement. Quite honestly, we've

5 been very busy. We submitted this to the State I

6 would say probably about a year ago and have been

7 working on it off and on through that time frame.

8 Q. Are the provisions of the easement that

9 you're negotiating with the Department of Trust

10 Lands different than the pore space leases you

11 signed with landowners?

12 A. To the extent that they call it an

13 easement versus a lease, yes. Beyond that, not any

14 significant changes.

15 Q. But there are some changes?

16 A. Sure. Because they consider the pore

17 space a -- you know, instead of a lease, they

18 consider it an easement. But beyond those

19 primary -- that is your primary difference, that

20 they consider it an easement rather than a lease.

21 So that would be a difference.

22 Q. Are there any additional protections for

23 reclamation or soils or anything like that in the

24 Department of Trust Land lease or easement?

25 A. Yeah, there are. However, as part of our

86

1 discussions with the State, we have no plans for

2 any surface on there. So, again, those are -- I

3 mean, that's a good point, and I do believe that

4 they have some specific requirements when there are

5 pipelines or there are facilities. We, however, do

6 not have any surface plants on any of those lands.

7 Q. So why wouldn't you offer those same

8 reclamation provisions to all of the landowners for

9 whom you don't have plans for their surface?

10 A. Sure. In fact, we went further and

11 offered every unleased landowner a no surface

12 facilities clause, thus, signaling that prior to

13 essentially any surface encounter, that we would

14 enter into a separate written agreement. So as we

15 go forward with amalgamation, that was -- if you

16 recall in my testimony, that every unleased owner

17 received a copy of the lease -- the option and

18 lease agreement via certified mail in the fall of

19 '23 and again in the spring of '24 that included a

20 no surface facilities clause.

21 Q. Did you also include language related to

22 soil reclamation and soil separation in the

23 Department of Trust Lands easement?

24 A. So they have a -- what I would consider a

25 standardized form regarding pipelines. In my

87

1 experience of acquiring right-of-way in North  
 2 Dakota, I've encountered that same form. That  
 3 includes, of course, things such as -- and I'm --  
 4 forgive me, I'm going from memory -- soil  
 5 segregations and other certain conditions, seed  
 6 mixtures and the likes, and I believe that they  
 7 included that on this particular agreement. I know  
 8 that Attorney Pelham and I talked about the  
 9 necessity as we considered perhaps a no surface  
 10 occupancy that would sort of negate the need for  
 11 that, but it is on that agreement.

12 Q. So you said you're familiar with some of  
 13 the Department of Trust Lands standardized forms;  
 14 would that be accurate?

15 A. I would say I'm generally familiar. I've  
 16 been involved in other right-of-way.

17 Q. So you're aware, for example, that the  
 18 State Department of Trust Lands has standardized  
 19 forms for things like a pipeline easement or a well  
 20 pad agreement out in the oil patch?

21 A. I am.

22 Q. And you may also know that with some of  
 23 those forms, they have some specific exhibits or  
 24 attachments that cover things like their preferred  
 25 seed mixture or soil stripping requirements. Have

88

1 you seen those before?

2 A. I certainly have, yes.

3 Q. And have you noticed that a lot of the  
 4 language throughout some of those different  
 5 agreements tends to be the same?

6 A. I would say that's a fair statement.

7 Q. That was a bad question, but thank you.

8 Are you aware of who at the Department of  
 9 Trust Lands actually drafts those agreements and  
 10 forms?

11 A. I am not.

12 Q. But we can assume it's the staff; right?

13 A. Yes.

14 Q. Do you know who did a lot, if not all, of  
 15 the negotiating for the surface division in the  
 16 development of a lot of the surface divisions forms  
 17 for the Department of Trust Lands throughout the  
 18 oil boom?

19 A. I would be speculating if I answered. I  
 20 do not.

21 Q. Do you know who Mike Haupt is?

22 A. I do.

23 Q. Are you aware that he developed the forms  
 24 and the leases that were submitted to Summit on  
 25 behalf of landowners working off of the exact same

89

1 forms that he developed for the State Department of  
 2 Trust Lands while he was at the State for his whole  
 3 career?

4 A. Will you please repeat that?

5 MR. BRAATEN: Would you mind reading it  
 6 back, Steph?

7 (Record read as requested.)

8 MR. SKAARE: Okay. So what I'm -- I want  
 9 to answer your question, but are you specifically  
 10 referencing a lease that we received?

11 Q. (MR. BRAATEN CONTINUING) Correct.

12 A. And what lease are we talking about  
 13 specifically?

14 Q. The one from Mike Haupt.

15 A. We received one from the Swenson group  
 16 that had some of the same forms that I would say  
 17 looked familiar or similar to the State. I'm not  
 18 sure that answers your question, but I understand  
 19 that there were some similarities.

20 Q. So does the State get that language in  
 21 their contract and the landowners don't simply  
 22 because they're the State?

23 A. I would disagree. We offered all unleased  
 24 landowners a no surface occupancy.

25 Q. But not protections for the surface;

90

1 right?

2 A. Well, by suggest -- or by entering into a  
 3 separate written agreement in the event that we  
 4 needed something, that would give them the  
 5 opportunity. So we did not gain access to the  
 6 surface for any facilities, pipeline, roads or  
 7 otherwise.

8 Q. Until the end of this hearing when you ask  
 9 the Commission to give that to you; right?

10 A. Under amalgamation you are correct, yes,  
 11 there are certain rights that would come in that  
 12 particular direction.

13 Q. So it doesn't really matter what the  
 14 landowner signed, does it?

15 A. What landowner? I -- I'm sorry. I'm not  
 16 trying to be tricky here. Can you ask that  
 17 question --

18 Q. Regardless of what any landowner signs  
 19 with you for your project, they are going to be  
 20 subject to Exhibit D to your storage agreement;  
 21 right?

22 A. I would disagree.

23 Q. Why?

24 A. Because we have a separate written  
 25 contract.

91

1 Q. That is superseded by that storage  
2 agreement the second this Commission issues its  
3 order; right?  
4 A. No.  
5 Q. Okay. Why not?  
6 A. Well, let me correct that. Your question  
7 was whether the storage agreement overrides the  
8 existing contracts with individual landowners for  
9 pore space leases. Did I understand your question  
10 correctly?  
11 Q. I don't know, but I'd like the answer to  
12 that question.  
13 A. Sure. I believe that a written contract  
14 with our landowners is a contract that we will  
15 adhere to.  
16 Q. Unless it is in conflict with the storage  
17 agreement; right?  
18 A. No.  
19 Q. So you're going to ask the Industrial  
20 Commission to impose the storage agreement and  
21 impose Exhibit D as a pore space lease on every  
22 unleased landowner; right?  
23 A. Yes.  
24 Q. And are you saying that you're not going  
25 to impose that on the landowners that signed a

92

1 lease?  
2 A. It will exist, but I think there are  
3 additional protections in those leases. Yes.  
4 Q. Additional protections that will not be  
5 superseded or obviated by the storage agreement?  
6 A. Well, for example, where we have a no  
7 surface occupancy, we will honor that contract.  
8 Q. Okay. Any others?  
9 A. Nothing at -- that comes to mind  
10 specifically.  
11 Q. So other than a no surface occupancy  
12 agreement, any agreement any landowner signed is  
13 not going to be honored if it violates the storage  
14 agreement?  
15 A. I disagree with that. I think that is a  
16 mischaracterization of what I was trying to say.  
17 Q. Well, I'm not trying to characterize what  
18 you're trying to say. I'm asking you a question.  
19 If a landowner signed a lease with  
20 Summit --  
21 A. Mm-hmm.  
22 Q. -- for the use of their pore space --  
23 A. Mm-hmm.  
24 Q. -- and that lease now has terms that  
25 conflict with the terms of the storage agreement,

93

1 what controls?  
2 A. We would honor the lease.  
3 Q. And so you're not asking the Industrial  
4 Commission to impose any kind of contractual terms  
5 on any single landowner if they signed a lease with  
6 you?  
7 A. Okay. Having an opportunity to re-review  
8 this, would you mind if I had the question read  
9 back to me so I can be accurate in my answer?  
10 MR. BRAATEN: Sure. Would you mind  
11 reading it?  
12 (Record read as requested.)  
13 MR. SKAARE: I think we're asking them to  
14 execute the storage facility agreement as -- as  
15 here as part of the application. I'm not sure that  
16 it creates any additional burdens on landowners  
17 that we don't address in our lease.  
18 Q. (MR. BRAATEN CONTINUING) Does the storage  
19 agreement or Exhibit D to the storage agreement  
20 have any applicability to a landowner who signed a  
21 lease with you?  
22 A. It does.  
23 Q. How so?  
24 A. I'm not sure I understand your question.  
25 Can you repeat it?

94

1 Q. How does the storage agreement apply to a  
2 landowner who signed a lease -- pore space lease  
3 with Summit?  
4 A. Well, I believe the storage agreement  
5 applies to all landowners. However, I believe  
6 we've also entered into a separate legal contract  
7 or agreement with certain landowners that has  
8 additional details and considerations.  
9 Q. Does the storage agreement impose the  
10 lease at Exhibit D on landowners?  
11 A. I would say it imposes those on the  
12 unleased landowners, yes.  
13 Q. Okay. And are you saying it does not  
14 impose Exhibit D and the terms of Exhibit D on the  
15 leased landowners?  
16 A. I would say that's a fair  
17 characterization. I believe that we've entered  
18 into a lease agreement with individual landowners.  
19 Q. Do the individual lease agreements that  
20 you've entered into with landowners have any  
21 material differences to the Exhibit D in the  
22 storage agreement?  
23 A. I would say not material.  
24 Q. And that's because you absolutely refuse  
25 to negotiate any kind of material change to the

95

1 lease for exactly that reason; right?

2 **A.** That is not true.

3 **Q.** Why was it that you did not negotiate

4 material changes to your lease?

5 **A.** Well, Mr. Braaten, through good-faith

6 negotiations with over 450 landowners, we acquired

7 in excess of 146,500 acres covering 16 townships

8 and 3 counties, and from the start we had some

9 changes to that agreement.

10 **Q.** How many?

11 **A.** I don't recall specifically, but we've

12 made some changes to the agreement. Some --

13 **Q.** More than five?

14 **A.** I don't recall the exact number.

15 **Q.** Less than ten?

16 **A.** I don't recall the exact number.

17 **Q.** Less than 20?

18 **A.** I don't recall the exact number of

19 changes.

20 **Q.** Less than a hundred?

21 **A.** I don't recall the exact number of

22 changes.

23 **Q.** But none of them were material?

24 **A.** No, I believe some were, including an

25 increase in the royalty rate.

96

1 **Q.** How much?

2 **A.** A 50 percent increase in royalty rate.

3 **Q.** To whom?

4 **A.** All landowners that signed equally.

5 **Q.** Okay. Okay. So you've made a few changes

6 to the global lease you circulated. Other than

7 changes that you made to the lease for anyone who

8 signed the lease, did you make any changes to the

9 lease in response to concerns expressed from any

10 individual that were material?

11 **A.** Yes. As I testified before, as we

12 developed the project, we offered a no

13 surface-facilities clause to a number of

14 individuals.

15 **Q.** Okay. Anything other than that?

16 **A.** Not that I recall.

17 **Q.** How many leases did you say you signed?

18 **A.** So we've executed -- the exact number I

19 don't know. What I could tell you is I know that

20 it's over 450 different individual signatures

21 across multiple different agreements. That covers

22 the -- the large scope of the project, including

23 the 146,000 acres that we've acquired.

24 **Q.** And you didn't allow a single landowner a

25 single material change based on their concerns in

97

1 all of those negotiations?

2 **A.** I think that's a mischaracterization.

3 **Q.** Can you name one?

4 **A.** Sure. Favored nations at the request of

5 your client.

6 **Q.** And that went to everyone; right?

7 **A.** It did, yes.

8 **Q.** So I'm talking about changes that weren't

9 global to the lease for everybody who signed.

10 **A.** No, we treated everybody equally.

11 **Q.** So no material changes to the lease form

12 based on negotiations with landowners about their

13 concerns?

14 **A.** No, but we took into consideration all of

15 our discussions across that entire footprint with

16 all these different landowners.

17 **Q.** If your answer to the landowners' concerns

18 and questions before they even expressed them is

19 no, how is that good faith?

20 **A.** Well, our answer wasn't no. We sat down

21 and had multiple meetings with many landowners from

22 the start of the project.

23 **Q.** How many material changes to the lease did

24 those meetings result in?

25 **A.** Again, I don't know the exact number, but

98

1 I can say that we've made some adjustments to that

2 lease. I think that lease is reflected in the

3 exhibits.

4 **Q.** And so the landowners who signed a lease

5 with you would get the same lease imposed on them

6 if they had not signed that lease?

7 **A.** Yes, with a few minor exceptions. For

8 example, a no surface occupancy clause that we've

9 granted to some.

10 **Q.** Okay. Any other exceptions?

11 **A.** No.

12 **Q.** Did you grant the no surface occupancy

13 clause only to those landowners who you were not

14 intending to put anything on anyway?

15 **A.** Well, I think the best way to understand

16 this is that when we started our project and our

17 leasing, it required some site characterization,

18 and so we didn't have a -- a complete understanding

19 of where everything would go. Through that site

20 characterization process, we were able to determine

21 where those things are located. And so it is

22 something that we were willing to grant to those

23 once we understood where we -- where we were

24 putting our facilities.

25 **Q.** If you do not reach an agreement with the

99

1 North Dakota Department of Trust Lands at the time  
 2 that this Commission issues its order, are you  
 3 asking this Commission to issue an order also  
 4 amalgamating the State lands that are administered  
 5 by detail?  
 6 **A.** If we were unable to enter into an  
 7 agreement and the Commission entered an order, it  
 8 would amalgamate those lands. It is not our  
 9 intention to do that. As I stated previously,  
 10 we've been actively working through the terms of  
 11 that agreement with the attorney appointed to  
 12 assist who's been in some of the many hearings I  
 13 think that you've been in, too, so --  
 14 **Q.** Has he shared any price points with you  
 15 from other transactions?  
 16 **A.** Can you elaborate on that question?  
 17 **Q.** Has the attorney with whom you're  
 18 negotiating for the Department of Trust Lands  
 19 shared with you any price points or comparable  
 20 transactions he thought you might want to review in  
 21 talking about compensation?  
 22 **A.** They have not.  
 23 **MR. BRAATEN:** Lawrence, were you using --  
 24 which number are you using for the application?  
 25 **MR. BENDER:** 1A.

100

1 **MR. BRAATEN:** Okay. I'm going to have you  
 2 take a look at Exhibit 1A, which I understand to be  
 3 the application for the Leingang facility?  
 4 **MR. BENDER:** Yes.  
 5 **Q.** (MR. BRAATEN CONTINUING) And I'd like to  
 6 direct your attention to the storage agreement  
 7 within the application. Do you have the page up in  
 8 front of you -- I show it as page 2 that has the  
 9 recitals listed at the top?  
 10 **A.** I do.  
 11 **Q.** Okay. So the recital states, "It is in  
 12 the public interest to promote the geologic storage  
 13 of carbon dioxide in a manner which will benefit  
 14 the state and the global environment by reducing  
 15 greenhouse gas emissions and in a manner which will  
 16 help ensure the viability of the state's coal and  
 17 power industries, to the economic benefit of North  
 18 Dakota and its citizens."  
 19 How does the Summit project benefit the  
 20 State and the global environment by reducing  
 21 greenhouse gas emissions?  
 22 **A.** (BY MR. BOESHANS) So clearly our project  
 23 reduces greenhouse gas emissions. We're storing  
 24 significant amounts of CO<sub>2</sub>.  
 25 **Q.** How is that a benefit to the global

101

1 environment?  
 2 **A.** So it's reducing emissions, number one.  
 3 Number two is we are providing -- we're -- we are  
 4 commercializing CCS and demonstrating commercial  
 5 CCS that can be implemented for others or by  
 6 others. We're also supporting North Dakota's  
 7 largest industries. Obviously the -- the CO<sub>2</sub> that's  
 8 coming from our project is being -- originated from  
 9 corn and corn markets are important to the citizens  
 10 of North Dakota. Supporting commodity prices and  
 11 land prices for agricultural sector. We're also  
 12 creating the opportunity for owners of pore space  
 13 to monetize that value of that resource.  
 14 **Q.** At whatever price you choose?  
 15 **A.** At the -- at the royalty rate in which  
 16 we've agreed to with in this case 93 percent of the  
 17 landowners.  
 18 **Q.** You didn't change it for a single one of  
 19 them, though; right?  
 20 **A.** No. As Jeff testified to, we changed --  
 21 we adjusted the royalty rate during our  
 22 negotiations.  
 23 **Q.** Globally.  
 24 **A.** Correct. We -- we entered into a --  
 25 included a favored nations clause, so it applies to

102

1 all.  
 2 **Q.** How does reducing greenhouse gas emissions  
 3 benefit the state of North Dakota?  
 4 **A.** Well, in this case it allows the  
 5 continued -- allows the plants in this case, the  
 6 ethanol plants, to continue producing ethanol and  
 7 selling that -- having access to new markets,  
 8 continuing the viability of those plants and that  
 9 industry --  
 10 **Q.** Which ethanol plants?  
 11 **A.** -- therefore supporting the -- therefore  
 12 supporting the corn markets.  
 13 **Q.** Oh, okay. I'm sorry. I should have let  
 14 you finish. Sorry.  
 15 But that's a benefit from a speculative  
 16 uplift in the price of corn from the financial  
 17 success of the ethanol plants flowing from their  
 18 response to a regulatory issue; right?  
 19 **A.** I wouldn't characterize it that way.  
 20 **Q.** How would you characterize it?  
 21 **A.** I'd say corn is a globally traded  
 22 commodity, and our project and our project partners  
 23 create a significant demand. And so there's a  
 24 supply/demand relationship. And to the extent that  
 25 they continue to operate and purchase that volume

103

1 and likely more, that that has a positive impact on  
 2 the overall agricultural commodity markets and  
 3 specifically corn.  
 4 Q. Okay. So let's put that aside and I want  
 5 to ask my specific question again, which is how  
 6 does reducing greenhouse gas emissions benefit the  
 7 state of North Dakota?  
 8 A. Again, as I said, this project reduces  
 9 greenhouse gas emissions.  
 10 Q. But I'm not asking about projects that  
 11 are -- or benefits that flow from this project.  
 12 I'm simply asking how does reducing greenhouse gas  
 13 emissions benefit the state of North Dakota? Or  
 14 maybe I should start does it benefit the state of  
 15 North Dakota to reduce greenhouse gas emissions in  
 16 Iowa?  
 17 A. So I think as you think about greenhouse  
 18 gas, you can't think about it as one state at a  
 19 time. Obviously, air goes everywhere. CO<sub>2</sub> is in  
 20 the air so reducing it at one point impacts the  
 21 overall concentration of CO<sub>2</sub>, you know, globally, so  
 22 to speak.  
 23 Q. But that's not a substantial and direct  
 24 impact for the citizens of North Dakota with  
 25 respect to the air they're breathing because we

104

1 took emissions out of the air in Iowa?  
 2 A. I would say that reducing -- excuse me --  
 3 reducing CO<sub>2</sub> emissions -- reducing CO<sub>2</sub> emissions is  
 4 not about making the air healthier. I don't really  
 5 understand the question or the -- the point of the  
 6 question.  
 7 Q. What benefits flow to anyone from reducing  
 8 greenhouse gas emissions?  
 9 A. (BY MR. SKAARE) Perhaps this will provide  
 10 a little more understanding to the recitals. North  
 11 Dakota Century Code Chapter 38-22-01 is policy. It  
 12 reads, "It is in the public interest to promote" --  
 13 excuse me -- "to promote geologic storage of carbon  
 14 dioxide." Doing so will benefit the State and the  
 15 global environment by reducing greenhouse gas  
 16 emissions. Consistent with the statute, we  
 17 included this in our recitals, and we believe that  
 18 there is benefits. I don't know that we can get  
 19 into the very specifics here. I think you're  
 20 asking a broad question.  
 21 Q. What benefits do you think there are to  
 22 the State of North Dakota from reducing greenhouse  
 23 gas emissions? Can you name one?  
 24 A. Yes.  
 25 Q. What?

105

1 A. I believe it -- it allows one of our major  
 2 ethanol plants the opportunity to engage in  
 3 low-carbon fuel markets.  
 4 Q. How does the Summit project help ensure  
 5 the viability of the state's coal industry?  
 6 A. (BY MR. BOESHANS) So I would say based on  
 7 my experience pursuing commercial CCS for the coal  
 8 industry, the biggest challenge is others having  
 9 done it before, having been done at large  
 10 commercial scale. And so by deploying CCS at  
 11 commercial scale, as we will here, we, in essence,  
 12 build out the pathway, if you will, for others to  
 13 follow and do the same.  
 14 Additionally, we're building a CO<sub>2</sub>  
 15 transportation network that can provide benefits to  
 16 others or opportunities for others to -- to use as  
 17 well.  
 18 Q. So how is the coal industry going to  
 19 benefit from what you're doing?  
 20 A. They're going to benefit from ultimately  
 21 the -- the demonstration at commercial scale and  
 22 that it's -- that it's been done and that by  
 23 extension makes the second of a kind -- kind of  
 24 provides a road map, so to speak.  
 25 Q. Didn't Minnkota already demonstrate it's

106

1 fully capable of doing that and then come in here  
 2 and express concerns about your application?  
 3 A. So Minnkota has a proposed project that  
 4 has yet to be constructed.  
 5 Q. Have you constructed your project?  
 6 A. Not yet.  
 7 Q. What projects are constructed?  
 8 A. Could you be more specific?  
 9 Q. Well, Red Trail is demonstrating success  
 10 with ethanol doing direct injection of carbon in  
 11 North Dakota; right?  
 12 A. They are.  
 13 Q. What are you doing that they don't already  
 14 know how to do?  
 15 A. We are replicating the same or similar at  
 16 scale.  
 17 Q. You're just bigger?  
 18 A. Yes, it's bigger.  
 19 Q. How does the Summit project help ensure  
 20 the viability of the state's power industries?  
 21 A. In the same way.  
 22 Q. If Summit constructs its project and  
 23 injects CO<sub>2</sub> as planned for the next 20 years, will  
 24 that reduce the global temperature?  
 25 A. So you're asking me to speculate?

107

1 Q. I don't know if I am.

2 A. You are asking me to speculate.

3 Q. Okay.

4 A. Because I don't know what others are going

5 to do as well.

6 Q. Hold all other things constant.

7 A. Again, I'm not a climate scientist, but I

8 don't believe so.

9 Q. The recitals also state that to further

10 geologic storage of carbon dioxide, a potentially

11 valuable commodity, may allow for its ready

12 availability if needed for commercial, industrial

13 or other uses, including enhanced recovery of oil,

14 gas and other minerals. Does any of that apply to

15 the Summit project?

16 A. Read that one more time.

17 Q. "To further geologic storage of carbon

18 dioxide, a potentially valuable commodity, may

19 allow for its ready availability if needed for

20 commercial, industrial, or other uses, including

21 enhanced recovery of oil, gas and other minerals."

22 A. (BY MR. SKAARE) So as I mentioned before,

23 right, these recitals are codified to a large

24 extent under 38-22-01 which also reads, "Further

25 geologic storage of carbon dioxide, a potentially

108

1 valuable commodity, may allow for its ready

2 availability if needed for commercial, industrial

3 or other uses, including enhanced oil recovery" --

4 excuse me -- "including enhanced recovery of oil,

5 gas and other minerals." And as I testified

6 earlier, the recitals are talking about the policy

7 as issued by the North Dakota State Legislature in

8 38-22-01.

9 Q. With the implication being that they apply

10 to your project, though; right?

11 A. Sure.

12 Q. And that one doesn't? That's a question.

13 Sorry. It's a bad question. Does anything in the

14 recitals, Section B, apply to your Summit project?

15 A. (BY MR. BOESHANS) Well, in reading it, it

16 says, "To further geologic storage of carbon

17 dioxide," which we are doing.

18 Q. And is the carbon dioxide that is going to

19 be stored by the Summit project going to be readily

20 available for commercial, industrial or other uses,

21 including enhanced oil -- recovery of oil, gas and

22 other minerals?

23 A. Not under the current sets of agreements,

24 but potentially it could be.

25 Q. If you change the law?

109

1 A. If I change the law? Excuse me. I don't

2 understand the question.

3 Q. Meaning that -- well, let me back up. In

4 order to get your tax credits for your project, you

5 have to permanently sequester the CO<sub>2</sub> underground;

6 right?

7 A. Yes, for the -- for the current customers,

8 yes, or partners, if you will.

9 Q. At what point are you going to switch your

10 45Q credits over the EOR credits?

11 A. We don't have any plans to do that.

12 Q. When do you think you will?

13 A. Again, I said we don't have any plans to

14 do that.

15 Q. So you're going to do the first 20 years

16 and then do that?

17 A. I would just say we don't have any plans

18 to do that.

19 Q. Have you talked about it?

20 A. Have we talked about?

21 Q. Switching to the EOR credit?

22 A. We have not.

23 Q. Are you going to pull the CO<sub>2</sub> being

24 sequestered in your project back out of the ground

25 at some point?

110

1 A. That's not the plan.

2 Q. Could be the plan, though, if it changes?

3 A. I would say it's -- it's -- the current

4 contracts require us to permanently store it.

5 Q. Which contracts?

6 A. What's that? Our agreements.

7 Q. Agreements with who, though?

8 A. With our -- our -- with our plant

9 partners.

10 Q. Is that because they need it to be

11 permanently sequestered in order to get their

12 low-carbon fuel standard credits?

13 A. That's my understanding.

14 Q. How long are those agreements locked in

15 for?

16 MR. BENDER: Can you speak up just a

17 little bit?

18 Q. (MR. BRAATEN CONTINUING) Sorry. How long

19 are those agreement terms?

20 A. I have not seen all the agreements so I

21 don't know the terms.

22 Q. Would it be fair to say that the CO<sub>2</sub> is

23 going to get stored there until 2040?

24 A. I don't -- I don't know that that's fair.

25 Q. Okay. Is it possible that you will

111

1 withdraw CO<sub>2</sub> from the reservoir before the year  
2 2040?

3 **A.** Again, it's not part of our plan. It  
4 might be technically possible. I believe it would  
5 be economically prohibitive and it's not part of  
6 our plan.

7 **Q.** Are there any legal barriers that you have  
8 identified that would prevent you from doing that  
9 other than your contracts with the partners?

10 **A.** I haven't analyzed that to determine.  
11 Again, not part of our plan.

12 **Q.** If you made a plan to withdraw CO<sub>2</sub> from the  
13 reservoir, would the landowners receive any  
14 additional compensation?

15 **MR. BOESHANS:** I'm going to defer to you,  
16 Jeff.

17 **A.** (BY MR. SKAARE) Sure. Again, not our  
18 plan, as Wade testified. Under the existing  
19 contract, there is no additional compensation for  
20 the removal of CO<sub>2</sub>.

21 **Q.** Have you ever reviewed any gas storage  
22 agreements?

23 **A.** Nothing specific or lately.

24 **Q.** Have you seen gas storage agreements with  
25 pricing structures that require payments both for

112

1 things being injected into and taken out of the  
2 storage facility?

3 **A.** I have not.

4 **Q.** Are you aware that that's the most common  
5 price structure for a gas storage agreement in the  
6 United States?

7 **A.** Sure.

8 **Q.** Does Summit intend to compensate the  
9 landowners for the withdrawals of gases at any  
10 point if it starts withdrawing CO<sub>2</sub>?

11 **MR. BENDER:** Asked and answered.

12 **HEARING EXAMINER GARNER:** Sustained.

13 **Q.** (MR. BRAATEN CONTINUING) Have you done  
14 technical feasibility studies on your ability to  
15 withdraw CO<sub>2</sub> from the reservoir after injection?

16 **A.** (BY MR. BOESHANS) We have not.

17 **Q.** Have you done any kind of research or  
18 study on that?

19 **A.** We have not.

20 **Q.** Why do you say that you think it would not  
21 be feasible to withdraw the CO<sub>2</sub> then?

22 **A.** I say that I believe it would not be  
23 feasible because when you withdrew the CO<sub>2</sub>, you'd  
24 have to separate it from the rest of the -- you  
25 know, from the fluids and -- and separate out the

113

1 CO<sub>2</sub>, compress it, transport it, and then reinject  
2 the other fluids. And so from that perspective,  
3 you'd take the CO<sub>2</sub> from the line first. But, again,  
4 we haven't -- I haven't done any studies on it to  
5 validate costs or -- it's just my -- from my  
6 general knowledge or understanding of how this, you  
7 know, would work under the question you were  
8 asking.

9 **Q.** Is it your understanding that after  
10 20 years these facilities will stop taking further  
11 injections?

12 **A.** It's my understanding that we are  
13 permitting these facilities for -- for 20 years.  
14 That those permits will be reviewed and updated  
15 every 5 years, and the time frame, you know, could  
16 change if CCS continues to be a commercial --  
17 commercially viable solution.

18 **Q.** But the facilities are still going to fill  
19 up at some point; right?

20 **A.** Yes. At some point the facilities would  
21 be full.

22 **Q.** What do you do with all the CO<sub>2</sub> coming  
23 through that pipeline when they're full?

24 **A.** Well, then we would permit additional  
25 facilities or -- assuming we needed additional

114

1 storage, at that point we would proceed to permit  
2 additional facilities.

3 **Q.** Might those facilities include things  
4 other than storage?

5 **A.** Your question is "might they"?

6 **Q.** Correct.

7 **A.** I guess that's possible.

8 **Q.** Would it be accurate to say there are no  
9 plans to shut down the flow into that pipeline when  
10 these storage facilities are full?

11 **A.** I would say that we have designed the  
12 project around 20 years. We haven't contemplated  
13 plans to shut it down afterwards. It's just that  
14 is the estimated project life at this point, but  
15 there are no plans to shut it down when the  
16 facilities are full. Again, I think it would come  
17 back to a -- you know, commercial considerations  
18 that are viable options at that point in time.

19 **Q.** Do you have a permanent required offtake  
20 agreement as a term of the agreements you have with  
21 your partners?

22 **A.** Say that one more time.

23 **Q.** Yeah. That was bad. Let me start over.

24 Do you have any contracts with your  
25 partners that require you to permanently take all

115

1 of the CO<sub>2</sub> coming out of their ethanol plants for  
 2 the life of their facility?  
 3 **A.** Again, I'm not aware of all the details of  
 4 those contracts. I haven't reviewed them, so I  
 5 can't answer that question.  
 6 **Q.** Well, this is just a general question,  
 7 too, though. Is the idea or the commitment being  
 8 made by Summit that they're committing to take all  
 9 the CO<sub>2</sub> from these plants for the life of those  
 10 plants or is it just for a 20-year project period?  
 11 **A.** I don't know the term of how long.  
 12 **Q.** That's pretty fundamental to the entire  
 13 project, though; right?  
 14 **A.** Certainly the offtake agreements I would  
 15 say, yes, I would agree are fundamental to the  
 16 project. What I'm telling you is I don't know the  
 17 specific duration of 57 different contracts because  
 18 I haven't reviewed them.  
 19 **Q.** Okay. I'll have you go to the definitions  
 20 in the storage agreement.  
 21 Real quick on the last question, have you  
 22 had any of your partners renew any contracts at  
 23 this point for offtake?  
 24 **A.** Yes, I'm aware of renewals.  
 25 **Q.** How many?

116

1 **A.** I don't know. I'm just generally aware  
 2 that we've renewed. I don't know how many.  
 3 **Q.** Have you discussed plans to expand the  
 4 geographic area of your storage facilities where  
 5 they exist right now in the future as a way to  
 6 increase your storage capacity?  
 7 **A.** So we have secured agreements with  
 8 landowners that own about 145,000 or over  
 9 145,000 acres. Our project is much like a  
 10 mine-mouth coal plant operation in that we have a  
 11 very large capital investment, \$8 billion, that's  
 12 depending on utilizing every resource at the end of  
 13 the line, much like a coal plant has -- mine-mouth  
 14 coal plant is dependent on the lignite coal  
 15 resource. And so they in those operations, you  
 16 know, have secured, generally leased hundreds of  
 17 millions of tons adjacent to the plant.  
 18 Initially, they'll permit a portion of  
 19 that, develop it. As they continue through  
 20 operations, they'll permit incremental reserves  
 21 over time. I would anticipate -- you know, that's  
 22 why we lease such a large area, and we don't have  
 23 current plans in terms of an application or a  
 24 specific design, but we secured pore space leases  
 25 over a larger area with the -- with the intent at

117

1 some point in time having the optionality to permit  
 2 additional areas and develop additional resources.  
 3 But we don't have specific plans, which I believe  
 4 is what your question was.  
 5 **Q.** But if you wanted to, for example, simply  
 6 expand the boundary of one of these storage units,  
 7 what is the limiting factor on how much more CO<sub>2</sub> you  
 8 can put in? Is it simply the geographic size of  
 9 what is permitted or is it related to the pressures  
 10 at which you're injecting?  
 11 **A.** Yeah, that's going to -- I would say  
 12 that's perhaps a better question for the reservoir  
 13 engineers, but certainly there's a variety of  
 14 factors that would come to play there. It would be  
 15 the design of the facility, the geologic  
 16 characteristics, the reservoir performance and all  
 17 of these different factors.  
 18 **Q.** Have you done modeling to determine how  
 19 much further out from the injectors past the  
 20 boundaries of the current storage facility you  
 21 could extend the plume in those storage facilities?  
 22 **A.** We have not. We ran our simulations for  
 23 20 years.  
 24 **Q.** On page 3 of the storage agreement in the  
 25 definitions -- this is back to Exhibit 1A --

118

1 there's a definition at 1.10 for storage expense.  
 2 It states it's all costs, expenses or indebtedness  
 3 incurred by the storage operator pursuant to this  
 4 agreement for or on account of storage operations.  
 5 Can you tell me generally what costs, expenses and  
 6 indebtedness would be covered by this definition  
 7 with respect to Summit's actual costs, expenses and  
 8 indebtedness for this project?  
 9 **A.** (BY MR. SKAARE) Is it -- is it referenced  
 10 elsewhere in the agreement besides the definition?  
 11 **Q.** I don't know.  
 12 **MR. BENDER:** Do you mind if I help?  
 13 **MR. BRAATEN:** Oh, no. Go ahead.  
 14 **MR. BENDER:** Take a look at 11.3.  
 15 **MR. SKAARE:** Yeah, almost there. Yeah,  
 16 11.3 references under Article 11, Relationship of  
 17 Parties, 11.3, Pore Space Owners Free of Cost.  
 18 "This Agreement is not intended to impose and shall  
 19 not be construed to impose upon any Pore Space  
 20 Owner any obligation to pay any Storage Expense  
 21 unless such Pore Space Owner is otherwise  
 22 obligated." So I would suggest or -- that it was a  
 23 definition intended to come back to reference that  
 24 section, which is, "All costs, expenses or  
 25 indebtedness incurred by the Storage Operator," as

119

1 sort of a comprehensive definition of any expenses  
 2 that are not allocated to the pore space owner.  
 3 Q. (MR. BRAATEN CONTINUING) Can you give me  
 4 a few examples of costs and expenses or  
 5 indebtedness incurred by the storage operator  
 6 pursuant to this agreement for or on account of  
 7 storage operations?  
 8 A. Sure. Lease operating costs or other  
 9 things are not intended to be imposed upon the pore  
 10 space owners.  
 11 Q. What are the lease operating costs for the  
 12 leases here?  
 13 A. So a lease operator would be someone who's  
 14 working on the project or other sort of expenses in  
 15 relation to the operation of the facilities are  
 16 what I consider storage expenses.  
 17 Q. Okay. So the lease operator, you're  
 18 referring to the pore space leases with the  
 19 landowner and Summit as the operator?  
 20 A. Yes.  
 21 Q. Okay. And those are the expenses for the  
 22 operations related to those pore space leases;  
 23 right?  
 24 A. That is correct.  
 25 Q. And so storage expense as used here

120

1 doesn't cover the amounts paid for the pipeline  
 2 easements for the Midwest Carbon Express; correct?  
 3 A. I don't know that that's correct. Can you  
 4 repeat that question?  
 5 Q. Well, let me ask it -- I thought I knew  
 6 the answer so let me ask it. Do storage expenses  
 7 as defined in the storage agreement as all costs,  
 8 expense or indebtedness incurred by the storage  
 9 operator pursuant to this agreement for or on  
 10 account of storage operations refer to the payments  
 11 made for easements for the Midwest Carbon Express  
 12 Pipeline?  
 13 A. I'm sorry. I need it again. I want to be  
 14 clear on this one.  
 15 MR. BRAATEN: Steph, would you mind  
 16 reading it?  
 17 (Record read as requested.)  
 18 MR. SKAARE: Your question is confusing.  
 19 I can answer it this way: I believe that the  
 20 definition is comprehensive, and that pursuant to  
 21 Article 11.3 that it is not intended to impose any  
 22 of those costs upon the pore space owners.  
 23 Q. (MR. BRAATEN CONTINUING) What confuses  
 24 you about the question?  
 25 A. The length, for starters.

121

1 Q. Okay. I can shorten it up for you.  
 2 A. Sure.  
 3 Q. Lease operating expenses, you're referring  
 4 to that as the expenses of the operator; right?  
 5 A. Well, I -- you asked for an example.  
 6 Q. Okay. And you're saying lease operating  
 7 expenses.  
 8 A. So I was not comprehensive at all.  
 9 Q. Right. But that's one?  
 10 A. Sure.  
 11 Q. Okay. Has Summit paid money for easements  
 12 for the Midwest Carbon Express Pipeline?  
 13 A. Yes.  
 14 Q. Is that money that you paid for those  
 15 easements something you would consider a storage  
 16 expense as defined under Section 1.10 of the  
 17 storage agreement?  
 18 A. I believe it falls under the overall costs  
 19 and expenses of a storage operator.  
 20 Q. How about the cost of the pipe?  
 21 MR. BENDER: Are you talking about the  
 22 costs of the pipe for the pipeline or are you  
 23 talking about costs of the pipe for the flowlines?  
 24 Q. (MR. BRAATEN CONTINUING) That's a fair  
 25 question. I mean for the main pipeline, the

122

1 Midwest Carbon Express Pipeline.  
 2 MR. BENDER: If you know.  
 3 MR. SKAARE: I don't know.  
 4 Q. (MR. BRAATEN CONTINUING) You don't know  
 5 if the cost for the pipe for the Midwest Carbon  
 6 Express Pipeline would be considered part of the  
 7 storage expenses as they are defined in the storage  
 8 agreement, Section 1.10?  
 9 A. I don't know that I'm the best person to  
 10 answer the question with respect to all things that  
 11 would be considered a storage expense.  
 12 Q. Did you draft that definition?  
 13 A. I worked and oversaw the development of  
 14 this, yes.  
 15 Q. Well, what did you mean when you wrote it?  
 16 A. I think as I was testifying earlier, it  
 17 was intended to create, as listed in 11.3, cost  
 18 free to the pore space owners, much like an oil and  
 19 gas lease, that they're not intended to pay for the  
 20 expenses of the injection operations.  
 21 Q. But there's never a question that any of  
 22 those oil and gas lessors need to pay for the  
 23 Dakota Access Pipeline, is there?  
 24 A. No.  
 25 Q. So why would the people in the storage

123

1 facility have any concern with the pipeline from  
 2 Iowa?  
 3 Let me ask you a different question. Are  
 4 you telling me that all the expenses for your  
 5 pipeline are included in the storage expenses for  
 6 the storage facility?  
 7 **A.** I guess I'm not sure I'm understanding the  
 8 line of questioning.  
 9 **Q.** Do you understand that question?  
 10 **A.** Can you rephrase it?  
 11 **Q.** Are all of your expenses for the Midwest  
 12 Carbon Express Pipeline considered expenses  
 13 incurred by the storage operator on account of the  
 14 storage operations?  
 15 **A.** I would say yes.  
 16 **Q.** So is that pipeline part of what you're  
 17 asking the Commission to give you a permit for  
 18 today?  
 19 **A.** No. If you're referring to the pipeline  
 20 in front of the PSC, the answer is no.  
 21 **Q.** Well, I don't mean the siting permit. I'm  
 22 asking you when you refer to the storage facilities  
 23 you're asking the Commission to permit, are you  
 24 including your pipeline to Iowa in that?  
 25 **A.** No.

124

1 HEARING EXAMINER GARNER: Okay. Why don't  
 2 we stop here and take an hour for lunch.  
 3 MR. BRAATEN: Okay.  
 4 (Recessed at 12:08 p.m. and reconvened at  
 5 1:10 p.m.)  
 6 HEARING EXAMINER GARNER: We are back on  
 7 the record. Mr. Braaten, I believe you were  
 8 questioning Summit's witnesses.  
 9 MR. BRAATEN: Thank you, Your Honor.  
 10 **Q.** (MR. BRAATEN CONTINUING) There was a  
 11 short discussion, Mr. Boeshans, about mine-mouth  
 12 plants, and I think you were explaining how North  
 13 Dakota's mine-mouth plants work as an analogy for  
 14 the Summit project; is that a fair statement?  
 15 **A.** (BY MR. BOESHANS) That's correct.  
 16 **Q.** Okay. Is it your testimony that the  
 17 lignite mines and the mine-mouth plants in North  
 18 Dakota are a single source?  
 19 **A.** I can't testify to the agreements that  
 20 exist between all of the mines and all of the  
 21 plants because they all have contracts -- different  
 22 contracts and contract terms. My point is those  
 23 utilities and/or co-ops made significant  
 24 investments and entered into relationships with --  
 25 or contracts with their coal providers that

125

1 required the coal provider to provide them the fuel  
 2 they needed to run the plant or the resource, said  
 3 differently, for decades. And many of those have  
 4 survived for now greater than 50 years.  
 5 The similarity to the Summit situation is  
 6 that we were investing \$8 billion to move CO<sub>2</sub> to  
 7 Oliver and Mercer County and so, consequently, you  
 8 know, we've secured to date over 145,000 acres of  
 9 pore space and today we're considering permits to  
 10 develop 90,000 acres.  
 11 **Q.** You were an executive at a coal mine;  
 12 right?  
 13 **A.** I was.  
 14 **Q.** Do the coal power plants and the coal  
 15 mines have different industrial classification  
 16 codes?  
 17 **A.** I don't recall what their industrial  
 18 classification codes are.  
 19 **Q.** If they used different industrial  
 20 classification codes, would that indicate to you  
 21 that perhaps Summit should consider something  
 22 similar by way of analogy?  
 23 **A.** I -- again, I'm not an expert in those  
 24 codes and classification codes in terms of how  
 25 they're used for tracking. I really can't answer

126

1 your question.  
 2 **Q.** Do the words "other nonhazardous waste  
 3 treatment and disposal" describe the storage  
 4 facilities?  
 5 **A.** Say that again. Repeat that again.  
 6 **Q.** "Other nonhazardous treatment and  
 7 disposal."  
 8 **A.** Again, I'd have to look at all of the  
 9 codes to say which one fits the best.  
 10 **Q.** Well, and I'm not asking what fits the  
 11 best, but do those words describe the Summit  
 12 storage facility?  
 13 Let's break it down. The emissions -- the  
 14 CO<sub>2</sub> is coming from emissions from ethanol plants;  
 15 right?  
 16 **A.** Correct.  
 17 **Q.** Would they consider that a waste stream  
 18 coming out of their emissions stack?  
 19 **A.** Coming out of their stack they would, yes,  
 20 I presume.  
 21 **Q.** Are you -- and we've talked about how you  
 22 don't have any plans to pull the CO<sub>2</sub> back out;  
 23 right?  
 24 **A.** Correct. Back out of the reservoir,  
 25 you're saying?

127

1 Q. Correct.

2 Could we agree that CO<sub>2</sub> is nonhazardous?

3 A. In -- yes, in the atmosphere, for sure.

4 Q. So other nonhazardous treatment and

5 disposal, do those words just generally describe

6 what Summit's doing with its storage facilities?

7 A. I would say the way you've described it,

8 yes.

9 Q. Okay. Are you aware that 221112 is the

10 industrial classification code for fossil fuel

11 generation?

12 A. I'm not.

13 Q. Are you aware that 212114 is the

14 industrial classification code for surface coal

15 mining?

16 A. I am not.

17 Q. Does fossil fuel generation describe the

18 lignite power plants in North Dakota, generally

19 speaking?

20 A. Yes, generally speaking.

21 Q. And does surface coal mining describe the

22 lignite mines at the mine-mouth plants in North

23 Dakota, generally speaking?

24 A. Yes. Generally speaking, yes.

25 Q. And you'd agree that a fossil fuel

128

1 generation plant is a different facility than a

2 surface coal mine?

3 A. Yes.

4 Q. There was testimony earlier that you would

5 do your level best to not put surface facilities on

6 an unleased landowner. Why can't you just put into

7 the Exhibit D lease no surface access for the

8 unleased landowners?

9 A. The Exhibit D in the storage agreement?

10 Q. Sorry. Yes.

11 MR. BOESHANS: Go ahead, Jeff.

12 A. (BY MR. SKAARE) Sure. To the extent that

13 we had a clause for no surface facilities, I don't

14 know that it would be that difficult to add that to

15 the -- to the lease.

16 Q. Can --

17 A. We know that some access may be necessary

18 for things such as seismic or other things.

19 Q. Is that something that you would know well

20 in advance?

21 A. I think that's safe to say.

22 Q. So is it also safe to say that the

23 Industrial Commission could include a provision

24 allowing no surface access for unleased mineral --

25 or unleased surface owners, and if you needed any

129

1 relief from that, say, to conduct seismic, you

2 could always come back and ask for that; right?

3 A. To be clear, you used the term no surface

4 access, and I probably should be clear about it's a

5 no surface-facilities clause.

6 Q. What can you do other than put facilities

7 on the surface with a no surface-access clause that

8 you have in your leases?

9 A. To the extent we'd be required, we would

10 continue to negotiate and work with landowners for

11 purposes of seismic or other times we would need to

12 enter into the land, thus access.

13 Q. So if you had agreed to a no

14 surface-access provision with a landowner -- sorry.

15 Let me start over.

16 With respect to the provision you've

17 referenced that is a no surface-access provision

18 that was included in some of Summit's pore space

19 leases, is it your testimony that Summit would

20 still be allowed to conduct seismic operations on

21 those properties even with the applicability of

22 that no surface-access clause?

23 A. This may be a good time to make sure that

24 my testimony is straight. I may have used the term

25 no surface access in general terms. What it is is

130

1 a no surface facilities that we've offered to the

2 landowners across the -- across the board. So to

3 the extent that I said that differently, that was

4 not intentional.

5 Q. Specifically, does the provision state,

6 "Unless otherwise agreed in writing, lessee agrees

7 that there will be no facilities, including well

8 sites, pipelines, power lines, or other surface

9 facilities on the following described real

10 property," and then it would go on to describe

11 whatever lease --

12 A. Yes. That's correct. Thank you for

13 bringing that up. That's the clause.

14 Q. And so what -- the version I have at least

15 states as the title before what I just read No

16 Surface Occupancy. And so is it a fair statement

17 that the no surface-access or no surface-facilities

18 clause that we've discussed, let's call it a no

19 surface occupancy clause for the moment, regardless

20 of what we call it, we're still always talking

21 about the same clause; right?

22 A. Yes.

23 Q. And with respect to that clause and the

24 leases in which it appears with Summit and then the

25 pore space owners, is it your position that Summit

131

1 still has the right to go on and conduct seismic  
 2 operations even on property with a lease that has  
 3 that no surface occupancy clause?  
 4 **A.** Yes.  
 5 **Q.** Did you hear concerns from landowners  
 6 about seismic operations?  
 7 **A.** Yes.  
 8 **Q.** And what were those concerns?  
 9 **A.** Concerns about distances from existing  
 10 water wells.  
 11 **Q.** With respect to the storage facilities, is  
 12 Summit asking to amalgamate the interests of just  
 13 the unleased owners?  
 14 **A.** That is correct.  
 15 **Q.** But is it intending to impose the  
 16 provisions of the storage agreement with the  
 17 attached pore space lease on all owners, leased or  
 18 unleased?  
 19 **A.** So, Mr. Braaten, as I testified before, I  
 20 do believe that, yes, it does, but it also -- you  
 21 know, we have written agreements with the existing  
 22 lease owners that we feel would govern with respect  
 23 to the -- the terms of the lease.  
 24 **Q.** Can I have you look at Section 3.3 of the  
 25 storage agreement?

132

1 **A.** Sure.  
 2 **Q.** And so you're able to testify that you're  
 3 going to honor those other leases because in  
 4 Section 3.3 of the storage agreement you're going  
 5 to impose on everyone, leased or unleased, it  
 6 states that the provisions of the various leases,  
 7 agreements, or other instruments pertaining to  
 8 respective tracts or the storage and storage  
 9 substances therein, including the pore space leases  
 10 attached hereto as Exhibit D, are amended to the  
 11 extent necessary to make them conform to the  
 12 provisions of this agreement.  
 13 Did I read that right?  
 14 **A.** You did read that correctly.  
 15 **Q.** So anyone who signed a lease is having  
 16 their lease conformed to this storage agreement no  
 17 matter what they negotiated with you and that's  
 18 what you're asking the Industrial Commission to do  
 19 right here, right now. Did I get any of that  
 20 wrong?  
 21 **A.** I don't necessarily agree with that.  
 22 **Q.** What do you disagree with?  
 23 **A.** I think the two work hand in hand still.  
 24 **Q.** What two?  
 25 **A.** The storage agreement and the pore space

133

1 leases that we've entered into.  
 2 **Q.** How so?  
 3 **A.** Because it says that they shall otherwise  
 4 remain in effect.  
 5 **Q.** But only to the extent they are now in  
 6 perfect conformance with the lease that you have  
 7 submitted to the Industrial Commission to impose;  
 8 right?  
 9 **A.** Perhaps, but I don't -- I know that  
 10 Summit's intention is to honor the lease agreements  
 11 that we've entered into.  
 12 **Q.** Then why doesn't it put that intent in  
 13 writing that it's asking the Commission to do  
 14 today?  
 15 **A.** I'm not sure.  
 16 **Q.** Would you like to ask the Commission to do  
 17 that, then?  
 18 **A.** I would think so.  
 19 **Q.** Yeah?  
 20 **A.** I think it would be fair.  
 21 **Q.** So we're going to amend this provision to  
 22 allow all of the pore space leases signed to remain  
 23 in full force and effect and not be abridged in any  
 24 way by the storage agreement submitted here?  
 25 **A.** I think I'll defer to counsel on the best

134

1 way to amend it rather than testify to it.  
 2 **Q.** Okay. Up above in the definitions there's  
 3 a storage facility participation, the term, and  
 4 then that refers to -- well, I'll just read it to  
 5 start. It says "Storage Facility Participation" --  
 6 sorry, I'm on page 4.  
 7 **A.** Mm-hmm.  
 8 **Q.** -- "is the percentage shown on Exhibit 'C'  
 9 for allocating payments for use of the Pore Space  
 10 under each Tract identified in Exhibit 'B'."  
 11 So I think I will start with Exhibit C, if  
 12 we can.  
 13 Would it be accurate to say that when you  
 14 listed the tracts -- let me start that over.  
 15 Would it be accurate to say that the  
 16 tracts listed were identified as all of the acreage  
 17 that is both in the storage facility and in any  
 18 given section and that would be one tract?  
 19 **A.** I think so.  
 20 **Q.** That was a bad question. Sorry. So let  
 21 me just -- tract number 1 includes all lands in  
 22 Section 27 that are also in the storage facility;  
 23 is that right?  
 24 **A.** I'm -- the one I'm looking at is maybe  
 25 different. I'm looking at --

135

1 Q. Oh, sorry.

2 A. -- storage 1, but I anticipate that your

3 question is -- the answer is yes.

4 Q. Yeah. Let me grab the one you're on real

5 quick. Okay. So tract 1 refers to Section 34 on

6 the application you're looking at in Exhibit C to

7 the storage agreement; is that right?

8 A. It does.

9 Q. Okay. And so it's only 120 acres, and I'm

10 presuming that that is because tract 1 includes all

11 acreage from Section 34 that is also in the storage

12 facility; is that accurate?

13 A. That is accurate.

14 Q. And is that how you determined each

15 separate tract would essentially be a separate

16 section and all of the land from that separate

17 section then is also within the storage facility?

18 A. That is correct.

19 Q. Okay. And so just as one example, tract

20 number 1 refers to Section 34, Township 142 North,

21 Range 87 West, and that has 120 acres and a tract

22 participation factor of 0.40754336 percent. Would

23 it be fair to say that that is the percentage of

24 the total acreage that tract 1 makes up of the

25 storage facility?

136

1 A. Yes.

2 Q. Okay. And so if we go up to Exhibit B.

3 MR. BENDER: Did you say B or D?

4 MR. BRAATEN: Exhibit B, as in boy.

5 MR. BENDER: Okay. Thank you.

6 MR. BRAATEN: And it is the tract summary.

7 Q. (MR. BRAATEN CONTINUING) And there,

8 again, we have tract number 1, Section 34, Township

9 142 North, Range 87 West, 120 acres, but we have

10 three different owners of interest each with, we'll

11 just say, 40 acres each.

12 A. Mm-hmm.

13 Q. And so they each have 33.3 percent tract

14 participation and that is the tract participation

15 factor for that tract number 1 and their interest

16 in it; is that accurate?

17 A. Yes.

18 Q. Okay. And then the storage facility

19 participation would essentially -- well, let's just

20 go straight across the top line for Gerald. So

21 essentially what this means, then, is for tract

22 1 -- and I don't know, Gerald may have other

23 tracts, but let's say that Gerald just owns tract

24 1 -- what this says is that Gerald's interest in

25 that tract is 33 percent and therefore you would

137

1 multiply that -- well, actually, how do you get

2 from the tract participation to the storage

3 facility participation?

4 A. Sure. Let me grab one number and I can

5 explain it. May I see Exhibit 5A? I think we had

6 it below us here. I have it. Exhibit 5A shows

7 that the total acreage for the Summit Carbon -- or

8 for the SCS1, TB Leingang, as 29,444.72 acres. If

9 you were to divide 40 by that number, you would see

10 that Gerald -- he pronounces his name Gerald --

11 Q. Thank you.

12 A. -- at .00135848 or .13584799 -- or 779 --

13 Q. Okay.

14 A. Sorry.

15 -- percent.

16 Q. So the storage facility participation

17 number would be the proportionate share of the

18 acreage for that individual landowner based on

19 their interest in that tract if we are following

20 their name across the row in your Exhibit B? That

21 was bad. Let me start over.

22 So let's start with Gerald. If we go

23 across, that storage facility participation number

24 is .13584779?

25 A. Correct.

138

1 Q. That would be his -- and putting aside

2 potential other interests, but if we assume this is

3 his only interest, what that is indicating is

4 that's his proportionate interest in the storage

5 facility based on his percentage interest in

6 tract 1?

7 A. That is right.

8 Q. Okay. How did Summit determine which

9 landowners it would ask the Commission to

10 amalgamate for its projects? And just so I'm not

11 confusing you, I'm not trying to ask for names

12 here. What I mean is not -- not the people, but

13 how did you decide which tracts of property or what

14 land you needed to amalgamate for purposes of the

15 project and the applications?

16 A. Sure. The unleased landowners inside the

17 storage facility boundary.

18 Q. Okay. Why the ones that are inside the

19 storage facility boundary?

20 A. So development of CO<sub>2</sub> or CO<sub>2</sub> storage

21 projects requires the cooperation of multiple

22 parties, and because their land is internal or

23 inside of that boundary, we know that it will be

24 impacted, or said differently, have CO<sub>2</sub> stored in it

25 and that's why we're seeking to amalgamate that

139

1 interest to develop the rights of the other  
 2 93 percent on average.  
 3 Q. How was the storage facility boundary  
 4 determined?  
 5 A. By the geologic model.  
 6 Q. Based on landowners that need to be  
 7 amalgamated or what was the basis for the  
 8 boundaries as set?  
 9 A. (BY MR. BOESHANS) Yeah. So maybe I can  
 10 help with that one. So the storage facility  
 11 design, or said different, simulation determines  
 12 the boundary or the plume extents at the end of  
 13 20 years of injection. Then we also modeled the  
 14 stabilized plume and then established the boundary  
 15 outside of that generally following describable  
 16 lines. It would have curved lines. We followed a  
 17 describable boundary that included buffer around  
 18 that.  
 19 Q. How far did you place the storage facility  
 20 boundary from the extent of the modeled plume?  
 21 A. The boundary was not always consistent.  
 22 In other words, we didn't just use the same buffer  
 23 everywhere.  
 24 Q. What's the range?  
 25 A. Don't recall specifically. I would say it

140

1 ranges between 500 feet, thousand feet, somewhere  
 2 in that neighborhood per my recollection, and maybe  
 3 as much as half a mile or so.  
 4 Q. With respect to the modeled CO<sub>2</sub> plume --  
 5 A. Mm-hmm.  
 6 Q. -- that line was drawn based on literally  
 7 what the model generated for the external  
 8 boundaries of that plume; right?  
 9 A. Yeah. I'll let Amanda testify more  
 10 specifically to that, but that was my understanding  
 11 is we were looking at the -- the model output for  
 12 the plume boundary at the end of 20 years of  
 13 injection. And then, additionally, the plume  
 14 boundary -- or the stabilized plume boundary  
 15 approximately 16 years later or I forget exactly  
 16 the name, but the stabilized plume boundary, and  
 17 that's what -- then we developed a storage boundary  
 18 outside of that.  
 19 Q. Did someone at EERC make the decisions on  
 20 the extent of the buffer area between the  
 21 stabilized plume boundary and the buffer zone -- or  
 22 the storage facility boundary?  
 23 A. No. They had -- they had input on it, but  
 24 we made the decisions -- Summit made the decisions.  
 25 Q. Based on what considerations?

141

1 A. Based on all the things I mentioned, along  
 2 with kind of the -- the -- which included, you  
 3 know, describable boundaries, reasonable buffer and  
 4 participating landowners.  
 5 Q. So you didn't draw the boundaries to  
 6 exclude unleased owners that you weren't able to  
 7 get leases from?  
 8 A. So if we had adequate buffer, we would --  
 9 we would not -- try to -- try to minimize the  
 10 amalgamation or the force --  
 11 Q. How do you determine whether the buffer is  
 12 adequate?  
 13 A. Basically, we know that the boundaries, if  
 14 you will, that are identified, you know, by the  
 15 modeling are at -- on thousand-foot blocks,  
 16 thousand-foot grid cells, and 5 percent saturation,  
 17 so we know what we start out with. It's fairly  
 18 thick to begin with. And then ultimately from that  
 19 we look at what is a reasonable boundary or buffer  
 20 that we have -- I would describe it as confidence  
 21 the plume will stay -- plume will stay inside of  
 22 and have included margin for error.  
 23 Q. What was the range of the buffer area from  
 24 the plume limit?  
 25 A. As I recall, it was around 500 feet to a

142

1 half mile, maybe more. Again, I'd have to go back  
 2 and look specifically or we'd have to look  
 3 specifically at those. I don't recall them off the  
 4 top of my head.  
 5 Q. But you're saying the model was using  
 6 thousand-foot blocks?  
 7 A. Yes. The grid cell size was a thousand  
 8 feet, as I recall it.  
 9 Q. Why 5 percent saturation and not something  
 10 lower?  
 11 A. I'm going to defer that one to the -- to  
 12 the EERC team.  
 13 Q. Why did you use 5 percent?  
 14 A. I used 5 percent because that's what the  
 15 standard that EERC had indicated had been used in  
 16 other permits, to my knowledge.  
 17 Q. Do you have any actual testing?  
 18 A. What kind of testing?  
 19 Q. Any.  
 20 A. Again, I -- what kind of testing?  
 21 Q. Testing to determine the saturation.  
 22 A. No. Testing to determine the saturation,  
 23 it's predicted by the model from my understanding.  
 24 Q. If you're using thousand-foot blocks, how  
 25 can that model tell you anything about where to put

143

1 a buffer in a 500--to-2,000-foot range?

2 **A.** Again, I'm going to defer that to the

3 reservoir engineering and geoscience team that is

4 more knowledgeable on the model and the software

5 and its reliability and predictability and how it's

6 been used.

7 **Q.** Is it your understanding that a change in

8 the 5 percent saturation could change the extent of

9 the plume model?

10 **A.** Again, that's outside of my specific area

11 of expertise and knowledge on how the model works,

12 but I would anticipate change of saturation

13 would -- potentially could change the boundary,

14 push it into a different cell.

15 **Q.** And it's your testimony that EERC is the

16 one who made the decision on -- well, let me start

17 that over.

18 With respect to the saturation percentage,

19 generally speaking, is it your testimony that the

20 folks at EERC made the decisions related to that

21 percentage and the modeling?

22 **A.** The EERC team of experts made a

23 recommendation to us on percentage saturation that

24 as I understand was consistent with what other

25 projects had done, and that's what we used in

144

1 developing the -- the permit application. But,

2 again, they'll be testifying later. They can speak

3 more specifically to the exact methodologies and

4 workings of the software.

5 **Q.** Is there any reason you would want to hide

6 that data from further review?

7 **A.** Hide what data?

8 **Q.** The data used by EERC to create the model.

9 **A.** Not to my knowledge. I believe it's

10 submitted to the -- to the DMR.

11 **Q.** The raw data for the model is submitted to

12 the DMR?

13 **A.** I'm going to let them testify

14 specifically, but that's my understanding is that

15 the model itself has been submitted to the DMR.

16 **Q.** Do you know when?

17 **A.** I don't know exactly the date.

18 **Q.** Was it within the last four weeks?

19 **A.** No. It would have been prior to that.

20 **Q.** And you're testifying that the data -- the

21 data decks and the model itself were all submitted

22 to the DMR?

23 **A.** Again, I'll have to, you know, defer to

24 the team that put all of the submittals into the

25 DMR. It is my understanding that the geologic

145

1 model was submitted to the DMR.

2 **Q.** Is there a reason that you would not want

3 people to have the data to assess that model?

4 **A.** No, I don't -- I don't think so. I --

5 it's my understanding that that, once submitted to

6 the DMR, is publicly available. But, again, my

7 understanding.

8 **Q.** Can I have you turn to Section 1.15 and

9 the definition of Storage Reservoir.

10 I'll ask a quick question first. I was

11 going to ask some questions about, for example, the

12 variation or range of vertical depth of pore space

13 throughout the reservoir. Would those be better

14 for the EERC folks?

15 **A.** Yes.

16 **Q.** Okay. Let's go down to 1.16 for Storage

17 Rights, then. From where does Summit obtain

18 storage rights to explore, develop and operate

19 lands within the facility area?

20 MR. BOESHANS: Jeff, I'll defer to you.

21 **A.** (BY MR. SKAARE) So I'm a little confused

22 by the question. Are you wondering -- well, maybe

23 you can ask it in a different way so I can

24 understand the question.

25 **Q.** Does Summit have any rights to explore,

146

1 develop and operate lands within the facility area

2 for the storage of storage substances as those

3 words are used in Section 1.16 of the storage

4 agreement?

5 **A.** Yes. Under the terms of the lease.

6 **Q.** Which lease?

7 **A.** To the extent that we have leased owners,

8 and then this would tie back, of course, to the

9 lease that we're -- we've attached as Exhibit D.

10 **Q.** Okay. So as defined, storage rights are

11 the rights to explore, develop and operate lands

12 within the facility area for the storage of storage

13 substances, and your testimony is that the source

14 of those rights is the -- or are the leases signed

15 with the individual pore space owners as well as

16 the lease attached as Exhibit D to the storage

17 agreement; is that accurate?

18 **A.** I think that's fair.

19 **Q.** When you sign a lease -- one of the pore

20 space leases with one of the landowners who signed,

21 how is it that you get rights from signing a

22 contract with them?

23 **A.** Well, I think the question's basic, and I

24 don't mean this to sound -- we've entered into a

25 property right agreement --

147

1 Q. Yeah.

2 A. -- through the terms of a lease.

3 Q. Yep.

4 A. Is that the question you're asking me?

5 Q. And are they conveying property rights to

6 you in exchange for money?

7 A. Yes.

8 Q. And so in that situation, there's a

9 consensual transaction by which that landowner

10 transfers specific property rights to Summit?

11 A. That is correct.

12 Q. In the case of Exhibit D attached to the

13 storage agreement, there's no consent from any

14 landowners, so by what power is that imposed on a

15 landowner if not by his consent?

16 A. If the Commission were to enforce

17 Exhibit D, the rights to inject and store carbon

18 dioxide under the terms of that lease would exist

19 in paragraph 4, but I understand that that's an

20 imposed lease.

21 Q. And what power does the Commission have to

22 impose a contractual document on a North Dakota

23 citizen?

24 A. I think that's more of a legal question.

25 Q. Are you a lawyer?

148

1 A. I am. So that's -- the powers granted by

2 the legislature in 38-22 to allow for the

3 amalgamation is the power that is granted to the

4 Commission through the legislature.

5 Q. And what is the Commission doing when it

6 amalgamates property rights?

7 A. Again, not trying to be flippant, I mean,

8 they're amalgamating the rights -- i mean,

9 they're -- can you expand on the question? I'm not

10 sure I understand the next --

11 Q. After the Commission amalgamates property

12 rights, does Summit end up with some property

13 rights that previously belonged to a landowner?

14 A. I would say yes, that's fair.

15 Q. Because the Commission took it from them

16 and gave it to you?

17 A. I wouldn't characterize it like that. I

18 think the Commission's working under the authority

19 granted to it by the State legislature.

20 Q. Authority to take private property; right?

21 A. To amalgamate interests across multiple

22 owners for the development of CO<sub>2</sub>. I understand the

23 question, yes, it is the property --

24 Q. In order to amalgamate the owners, what

25 you're doing is taking their property rights and

149

1 telling them you no longer have the right to

2 exclude me from your property. I'm coming on

3 whether you like it or not, and that means that you

4 now have a property right, the right to exclude,

5 that they used to have, but now they don't have and

6 you do have, all by virtue of the Commission order;

7 is that accurate?

8 MR. BENDER: Objection. Argumentative.

9 Compound.

10 HEARING EXAMINER GARNER: Sustained.

11 Q. (MR. BRAATEN CONTINUING) Can Summit

12 operate the storage facility without amalgamating

13 it?

14 A. No.

15 Q. Why not?

16 A. Much like oil and gas, in order to develop

17 a resource, in this case pore space, would require

18 the cooperation of multiple landowners for

19 development into that formation.

20 Q. And what happens if they don't cooperate?

21 A. The same thing we've just discussed which

22 is an order for amalgamation.

23 Q. What happens in oil and gas when they

24 don't cooperate?

25 A. An unleased landowner has certain

150

1 statutory rights regarding the development of oil

2 and gas.

3 Q. And you do oil and gas law; right?

4 A. I do.

5 Q. They get their just and equitable and

6 their proportionate share in the reservoir; right?

7 A. So a nonleased landowner in North Dakota

8 who decides to go nonconsent to a well is subject

9 to a risk penalty, and upon completion of that risk

10 penalty, they are entitled to their proportionate

11 share of the minerals that they reserved or own in

12 that particular unit, and I believe there's a

13 statutory provision for a royalty along the way.

14 Q. So essentially what they get is a

15 16 percent interest cost free, meaning on gross,

16 and the remainder 84 percent on net revenue?

17 A. After the imposed risk penalty.

18 Q. Which is statutorily prescribed to be just

19 for oil and gas?

20 A. Yes. That's true.

21 Q. So if we want to apply oil and gas law to

22 the Summit project, let's go up to Exhibit B,

23 specifically Exhibit B, the Tract Summary attached

24 to the storage agreement. Gerald's just and

25 proportionate equitable share if we were talking

151

1 about an oil and gas reservoir would  
 2 be .13584779 percent; right?  
 3 **A.** Yes.  
 4 **Q.** And under the oil and gas laws you were  
 5 just talking about, it would be that percentage  
 6 split out into a 16 percent on gross and an  
 7 84 percent on net revenue?  
 8 **A.** In oil and gas when it is the extraction  
 9 of an existing mineral, yes.  
 10 **Q.** Right. Because that mineral isn't owned  
 11 by the operator necessarily; it's owned by the  
 12 mineral owners?  
 13 **A.** That's right.  
 14 **Q.** Just like the pore space is owned by the  
 15 surface owners?  
 16 **A.** I understand. Yes.  
 17 **Q.** Can I have you turn to Section 2.4 of the  
 18 storage agreement in the application, Exhibit 1A.  
 19 There's a Section 2.4 on correcting errors, and the  
 20 second sentence says, "If it subsequently appears  
 21 that any Tract, mechanical miscalculation or  
 22 clerical error has been made, Storage Operator,  
 23 with the approval of Pore Space Owners ... shall  
 24 correct the mistake."  
 25 Can you just tell me what is meant by a

152

1 "mechanical miscalculation"?  
 2 **MR. BENDER:** Can I help?  
 3 **MR. BRAATEN:** Yeah, please.  
 4 **MR. BENDER:** I think that's a typo. I  
 5 think that should say mathematical.  
 6 **MR. BRAATEN:** Okay. That makes more  
 7 sense.  
 8 **Q.** (MR. BRAATEN CONTINUING) Okay. So in the  
 9 same exhibit, at Section 3.1 we had some discussion  
 10 of this, but it states that any pore space owner in  
 11 the storage facility who owns a pore space interest  
 12 in the storage reservoir that is not leased for the  
 13 purposes of this agreement and during the term  
 14 hereof, shall be treated as if it were subject to  
 15 the pore space lease attached hereto as Exhibit D.  
 16 Is Summit willing to adjust that Exhibit D  
 17 to ensure there is no surface occupancy as it has  
 18 done for some of the signed lease owners?  
 19 **A.** Yes, we would do that.  
 20 **Q.** Okay. Can I have you go down to Section  
 21 8.1 of the storage agreement. 8.1 states, "Grant  
 22 of Easement. Storage Operator shall have the right  
 23 to use as much of the surface of the land within  
 24 the Facility Area as may be reasonably necessary  
 25 for Storage Operations in the injection of Storage

153

1 Substances."  
 2 Does that apply to unleased lands, surface  
 3 lands?  
 4 **A.** As written today, it does.  
 5 **Q.** And would Summit also change that  
 6 provision so that it does not apply to unleased  
 7 surface lands?  
 8 **A.** Yes. I -- I think it was implied in my  
 9 answer that consistent with the leases that we sent  
 10 to everybody in the spring of -- excuse me -- the  
 11 fall of '23 and again in the spring of '24, we've  
 12 included that no surface-facilities clause and so  
 13 it's an easy thing to provide. And so we can add  
 14 that to the Exhibit D pore space lease.  
 15 **Q.** Okay.  
 16 **A.** And -- and then it would have its impact  
 17 in here as well, if that's the question, subject to  
 18 Exhibit D.  
 19 **Q.** Okay. As it's written right now, with the  
 20 landowners who have signed leases with Summit --  
 21 **A.** Mm-hmm.  
 22 **Q.** -- do their leases give Summit explicitly  
 23 the right to use as much of the surface of the land  
 24 within the facilities area as may be reasonably  
 25 necessary for operations?

154

1 **A.** No, it does not.  
 2 **Q.** Okay. So this is granting additional  
 3 rights to Summit to use the surface of property  
 4 that is leased as well as unleased?  
 5 **A.** So as I testified earlier in direct, we do  
 6 not anticipate additional surface usage  
 7 specifically towards facilities, roads, pipelines,  
 8 et cetera. There may be needs for ingress and  
 9 egress for purposes of various studies or  
 10 otherwise.  
 11 **Q.** And are you saying that if your existing  
 12 leases and agreements with the landowners don't  
 13 give you those rights of ingress and egress, you're  
 14 asking the Commission here to grant those rights to  
 15 you regardless of whether you have them in the  
 16 private contracts; is that accurate?  
 17 **A.** No. Our existing leases do have rights of  
 18 ingress and egress.  
 19 **Q.** Okay. So I want to back up, though. Do  
 20 you think that this provision 8.1 gives Summit any  
 21 rights on the surface of landowners who have signed  
 22 leases that aren't already explicitly in the lease?  
 23 **A.** So it -- in its language it states "as may  
 24 be reasonably necessary."  
 25 **Q.** In the lease or in this?

155

1     **A.** In this clause.

2     **Q.** Okay. And that --

3     **A.** So --

4     **Q.** Sorry. Go ahead.

5     **A.** I'm sorry too. The storage operator shall

6 have the right to use as much of the surface of the

7 land within the facility area as may be reasonably

8 necessary for storage operations and the injection

9 of stored substances. I read that sentence in its

10 entirety, and there is an imposed reasonableness

11 standard on what's there. So unless it's

12 reasonably necessary, I -- I think it's limited by

13 "reasonably necessary."

14     **Q.** Does the grant of an easement to do what

15 is reasonably necessary for your operations expand

16 your rights to use the surface of any of the lands

17 that are leased?

18     **A.** I don't believe it expands the rights when

19 we have an existing lease. We have an existing

20 written contract when there is a lease.

21     **Q.** So it's not your intent to obtain any

22 rights to use the surface beyond the rights

23 explicitly granted in your leases with respect to

24 the properties that are under lease?

25     **A.** With respect to the properties that are

156

1 under lease, that is correct.

2     **Q.** Okay. And with respect to the unleased

3 properties, would it be accurate to say that you're

4 asking the Commission to give you the property

5 rights necessary to do what is reasonably necessary

6 for your storage operations on the surface of those

7 unleased lands?

8     **A.** Yes. That's correct.

9     **Q.** By what authority do you think the North

10 Dakota Industrial Commission can grant anyone the

11 right to use the surface?

12     **MR. BENDER:** I'm going to object with

13 respect to his characterization of "anybody."

14 We're not talking about anybody. We're talking

15 about the operator of the pore -- of the storage

16 unit.

17     **MR. BRAATEN:** That's fair. I'll withdraw

18 the question and reask.

19     **Q.** (MR. BRAATEN CONTINUING) By what

20 authority do you think the North Dakota Industrial

21 Commission can grant Summit property rights

22 sufficient to allow it to do what is reasonably

23 necessary for storage operations on the property of

24 the intervenor landowners I represent?

25     **A.** So the North Dakota Industrial Commission

157

1 is operating under North Dakota Century Code

2 Chapter 38-22 and its administrative rules which I

3 believe are 43-01-05. I might have that backwards.

4     **Q.** Two -- 2-05.

5     **A.** Oh, 2-05? Allow me to look. 43-05-01.

6     **Q.** Oh, we're both wrong.

7     **A.** And so I think that the authority, to

8 answer your question, comes both from the

9 legislature and the Century Code and then based on

10 the rules that they've developed.

11     **Q.** What provision of Chapter 38-22 provides

12 any authority to do anything, amalgamation or

13 otherwise, to the surface lands as opposed to the

14 pore space?

15     **A.** I would say under 38-22-03 entitled

16 Commission Authority, which reads, "The Commission

17 has authority over all persons and property

18 necessary to administer and enforce this chapter

19 and its objectives."

20     **Q.** And so are there no limits on the

21 Commission's authority as long as that's what

22 they're doing?

23     **A.** I think that's a mischaracterization.

24     **Q.** Well, I'm asking. I'm not saying that's

25 what you said.

158

1     **A.** Certainly there are limitations, much like

2 the reasonableness standard that's in the draft

3 storage agreement.

4     **Q.** And what are those limitations?

5     **A.** I would say limited to the extent

6 necessary to develop and store CO<sub>2</sub> under Century

7 Code.

8     **Q.** Would you agree it's also limited by the

9 mandates and prohibitions of the constitution of

10 North Dakota?

11     **A.** So I'm not a constitutional lawyer. I

12 don't know that I have an opinion on that.

13     **Q.** Well, as a lawyer, do you support and

14 uphold the constitution --

15     **A.** I do.

16     **Q.** -- as a practicing lawyer?

17     **A.** Yes, I do.

18     **Q.** Does that trump the other law?

19     **A.** Does -- when you say "that" --

20     **Q.** The constitution?

21     **MR. BENDER:** Mr. Examiner, I think we're

22 getting into areas now where we're arguing legal

23 issues, and I don't think this is the appropriate

24 way to make those legal arguments.

25     **HEARING EXAMINER GARNER:** Sustained.

159

1 Q. (MR. BRAATEN CONTINUING) Can I have you  
2 turn to Section 8.4 of the agreement that we're  
3 looking at. There's a reference to the surface and  
4 subsurface operating rights, and it references use  
5 of water. Can you explain the ways that you  
6 understand Summit intends to use water from the  
7 reservoir in the formation?  
8 A. (BY MR. BOESHANS) Yes. I would say this  
9 is more of a question for the drilling operations  
10 and that team. My understanding is that as we  
11 drill the well and maintain the well, we have needs  
12 to pull samples or move fluids in or out of the  
13 reservoir during the drilling and completion  
14 process, but they can speak more specifically to  
15 that.  
16 Q. Are the drilling folks the folks from  
17 EERC?  
18 A. No. They're members of our team.  
19 Q. Okay. And is it like a separate drilling,  
20 like, consultant or they're actual employees of  
21 Summit?  
22 A. We have employees of Summit that will --  
23 Q. Okay.  
24 A. -- be testifying here.  
25 Q. Okay. Are you asking in this provision

160

1 for the Commission to grant property rights or  
2 ownership rights to the water or just the ability  
3 to use the water in the drilling operation?  
4 A. I would defer to Jeff here as well. My  
5 understanding is that we're requesting the  
6 permission to use the water as needed to facilitate  
7 operation and injection of CO<sub>2</sub>.  
8 Q. So I'll ask a couple questions just to  
9 kind of explain what I'm getting at here.  
10 A. Sure.  
11 Q. The -- are you aware that, generally  
12 speaking, until put to beneficial use, water in  
13 North Dakota is generally all considered waters of  
14 the state?  
15 A. Mm-hmm.  
16 Q. And to the extent any waters in the  
17 reservoir have not been put to any kind of  
18 beneficial use, they may be deemed to be waters of  
19 the state. And so my question is simply in here  
20 are you asking to be able to use the waters in the  
21 reservoir as necessary for your operation, or are  
22 you asking for the State to actually grant you the  
23 right to that water in that reservoir to use  
24 however you please?  
25 MR. BOESHANS: Sure. Jeff, I'll let you

161

1 take that. That's more of a definition.  
2 A. (BY MR. SKAARE) Sure. "Except to the  
3 extent modified in this Agreement, Storage  
4 Operator" -- "Operator shall have the same rights  
5 to use the surface and sub-surface and use of water  
6 and any other rights granted to Storage Operator in  
7 any lease covering the Pore Space Interests." I  
8 understand that to mean the rights to use water  
9 where necessary. Our needs for water will be  
10 privately contracted for drilling.  
11 Q. So just to use perhaps a slightly  
12 ridiculous example, you don't have plans and it's  
13 not your intent that you would be able to, then,  
14 open up a water depot and start pumping water out  
15 and selling it?  
16 A. That would not be commercially reasonable.  
17 It would not -- no. Absolutely.  
18 Q. Okay. And so if we were in the oil and  
19 gas context -- and you can object -- but generally  
20 what you're saying is what you're asking for is the  
21 ability to use the water in the reservoir as  
22 reasonably necessary for your operations; is that a  
23 fair statement?  
24 A. That is correct.  
25 Q. Okay. Turn down now to Exhibit D, the

162

1 Form of Pore Space Lease, that we've referred to a  
2 few times. It's in the application.  
3 A. I am there.  
4 Q. In Section No. 2 under the Term, there's a  
5 reference to bonus payment of \$20 per acre and an  
6 annual rental of \$4 per acre for the initial term.  
7 MR. BENDER: I think you may have misread  
8 that, Mr. Braaten. Mine says \$25.  
9 MR. SKAARE: So does mine.  
10 MR. BRAATEN: What did I say?  
11 MR. SKAARE: 20.  
12 MR. BENDER: You said 20.  
13 Q. (MR. BRAATEN CONTINUING) Sorry. Let me  
14 start that over. So I read this to say they're  
15 paying a bonus payment of \$25 per acre and it  
16 states that's a single one-time bonus payment. And  
17 an annual rental of \$4 per acre for the initial  
18 term. How did Summit decide upon those numbers for  
19 the bonus and rental?  
20 A. (BY MR. BOESHANS) Yeah, I would say kind  
21 of two ways. We initially started with numbers  
22 that were consistent with coal leases and coal  
23 leasing that I had familiarity with in obviously my  
24 previous experience. They were then adjusted from  
25 there based on negotiations with the landowners.

163

1 Those are some of the terms that changed during  
 2 the -- the negotiations.  
 3 Q. And then just to follow up on that,  
 4 there's a Section 3, Royalty, that has a 50 cent  
 5 per metric ton and then later percentage increases.  
 6 Did you decide on those numbers the same way as the  
 7 bonus and the rental?  
 8 A. That's what we ultimately started with.  
 9 Q. Okay.  
 10 A. And then, again, same deal as -- through  
 11 negotiations, they were adjusted.  
 12 Q. And the coal leases, are those with just  
 13 one operator or numerous operators?  
 14 A. You're -- you're asking me for my points  
 15 of -- point of reference?  
 16 Q. Yeah.  
 17 A. Yeah. With numerous.  
 18 Q. Okay. And those were North Dakota coal  
 19 leases?  
 20 A. Correct.  
 21 Q. Were any of them new leases signed within  
 22 the last 50 years?  
 23 A. Yes. Haven't been in the business  
 24 50 years.  
 25 Q. What companies are still leasing coal in

164

1 North Dakota?  
 2 A. I don't know specifically who's actively  
 3 leasing or not leasing. We were leasing when I was  
 4 at BNI.  
 5 Q. When you were leasing at BNI, had you  
 6 adjusted the rates you were paying since the 1930s?  
 7 A. We had.  
 8 Q. How much, just percentagewise?  
 9 A. Well, I wasn't there in the 1930s.  
 10 Q. No. That's fair. Sorry. I didn't mean  
 11 to imply you were.  
 12 A. I know I'm getting gray, but -- I am gray.  
 13 Q. Okay. So how many times did you adjust or  
 14 change the bonus or rental or royalty amount that  
 15 you were offering landowners for a pore space  
 16 lease? And I'm speaking now -- sorry. We were  
 17 talking about BNI. So I'm talking Summit now. In  
 18 the time with Summit, how often did Summit adjust  
 19 the bonus, rental or royalty in response to their  
 20 negotiations with the landowners?  
 21 MR. BOESHANS: Maybe I could defer to Jeff  
 22 here as well. We -- I don't recall specifically  
 23 the order in which the changes were made, but we  
 24 were moving those around or adjusting them through  
 25 the negotiations, but I don't recall was it all at

165

1 once or multiple steps. My recollection is it was  
 2 multiple steps, but I'm going to defer to Jeff and  
 3 his -- his --  
 4 A. (BY MR. SKAARE) Sure. So we began  
 5 negotiations in September of '21, made significant  
 6 offers -- and when I say "significant," we reached  
 7 out to a large number of landowners. We started to  
 8 see some of these leases come in. We received  
 9 feedback from a number of people, including some of  
 10 your clients, regarding multiple terms. Those  
 11 terms included annual rental, and I'm going off of  
 12 memory. They included increase in royalty, an  
 13 increase in the extension term bonus. They  
 14 included percentage increase year over year. They  
 15 included favored nations. And perhaps others that  
 16 I'm not recalling at the moment.  
 17 Q. And, I'm sorry, I should have asked that  
 18 question more specifically, but what I -- what I'd  
 19 intended was just -- and let me actually start --  
 20 break it down and ask some different questions.  
 21 Is the \$25-an-acre bonus, \$4-an-acre  
 22 rental and 50 cent per metric ton the monetary  
 23 offer made by Summit in the first pore space leases  
 24 you mentioned that were set out -- sent out?  
 25 A. No.

166

1 Q. And what was the opening offer that Summit  
 2 made to landowners?  
 3 A. If my memory serves me correct, the bonus  
 4 payment of \$25 an acre is consistent. The royalty  
 5 was 25 cents. The annual rental was \$2 per acre.  
 6 And the reason the majority of the changes came  
 7 together, though discussed with multiple  
 8 landowners, is primarily due to the favored nations  
 9 clause, at which point we sent out a first  
 10 amendment to our pore space agreements to anyone  
 11 who had signed prior to provide them with the same  
 12 terms as what we eventually came to from the  
 13 negotiations on -- as I testified was 450-plus  
 14 different landowners.  
 15 Q. And so once you had given all of the  
 16 landowners that most favored nations clause, you  
 17 were unable to modify things for any additional  
 18 landowners negotiating with you without changing  
 19 all the other agreements. Is that your testimony?  
 20 A. With respect to compensation, yes. Well,  
 21 may I qualify that? Any change applied to  
 22 everyone.  
 23 Q. And so other than the change such as the  
 24 no surface-facilities clause we discussed, what  
 25 were the changes to the compensation level you just

167

1 mentioned, you simply didn't make changes for other  
 2 landowners in individual negotiations; is that  
 3 right?  
 4 **A.** I think that's correct, yes.  
 5 MR. BOESHANS: Change to compensation.  
 6 MR. BRAATEN: I included that, yeah.  
 7 **Q.** (MR. BRAATEN CONTINUING) So other than  
 8 the coal leases you say you looked at when you  
 9 started developing this, did you gather any  
 10 information or do any research or investigation  
 11 other than that to arrive on monetary amounts to  
 12 put into the leases?  
 13 **A.** (BY MR. BOESHANS) With my -- you know, in  
 14 my former role I was aware of compensation related  
 15 to Minnkota's project, but other than that, at the  
 16 time there weren't any other public available  
 17 references, if you will, lease terms around CO<sub>2</sub>  
 18 projects that I was -- had access to. And so the  
 19 only thing from a CO<sub>2</sub> perspective, market  
 20 perspective that I had was the one project that I  
 21 was familiar with. And --  
 22 **Q.** But -- I'm sorry. Go ahead.  
 23 **A.** So, yeah, that was kind of the -- that was  
 24 what I would describe as the extent of it.  
 25 **Q.** Okay. Can I have you turn to Section 17

168

1 of Exhibit D to the storage agreement in the  
 2 application, Exhibit 1A. Sorry, we've got exhibits  
 3 within exhibits. That got a little long. But we  
 4 are looking at Exhibit 1A, the application. Within  
 5 that exhibit there is a storage agreement, and  
 6 attached to that storage agreement is Exhibit D  
 7 which is the Form of Pore Space lease.  
 8 **A.** (BY MR. SKAARE) Yep.  
 9 **Q.** Within that Exhibit D, Section 17 I'd like  
 10 to direct your attention to.  
 11 **A.** I am there.  
 12 **Q.** Thank you. So this section states that  
 13 the bonus and royalty amounts contemplated and paid  
 14 to lessor hereunder is compensation for, among  
 15 other things, damages sustained by lessor for lost  
 16 land value, lost use of and access to lessor's land  
 17 and lost value of improvements, if any, and to the  
 18 extent applicable.  
 19 So if Summit needs to access some of its  
 20 facilities and it drives across the farm field  
 21 planted with wheat and takes out part of a farmer's  
 22 crop and that farmer is unleased, this provision  
 23 says they don't get damages for the part of their  
 24 crop that was destroyed and they've already been  
 25 compensated with the royalty?

169

1 **A.** That is incorrect.  
 2 **Q.** Okay. Explain how that's wrong.  
 3 **A.** So under paragraph 11 on page D-4, we have  
 4 our Hold Harmless and Indemnification. The intent  
 5 of paragraph 17 is essentially acknowledgment that  
 6 the bonus and royalties are compensation for the  
 7 use of, in this case, the real property or the pore  
 8 space. So acknowledging that if we did permanent  
 9 storage, that that particular reservoir may be  
 10 unusable in the future, so the clause was intended  
 11 to be acknowledgment that the compensation would  
 12 utilize and use that pore space.  
 13 **Q.** So then in 17 would it be accurate to say  
 14 that the intent is to limit that language as if we  
 15 added to the end "rising out of the ordinary and  
 16 reasonable operations of Summit"? And I'm not  
 17 asking to amend it. I'm just trying to make myself  
 18 understood here that when you say that the bonus  
 19 and the royalty amounts are compensation for lost  
 20 land value, lost use of access, you're saying it's  
 21 compensation for lost land value, lost use and  
 22 access arising from exercising the rights to inject  
 23 into the pore space but not I accidentally started  
 24 a fire in your field?  
 25 **A.** You are correct. We are not seeking --

170

1 your characterization is correct.  
 2 **Q.** Okay. So in Section 16 there's a force  
 3 majeure clause. When a force majeure clause is  
 4 signed between two parties to a contract, generally  
 5 speaking we understand how that's going to work if  
 6 there's a dispute, but in the event of force  
 7 majeure here if -- well, let me start over.  
 8 In the event of a force majeure event to  
 9 which Section 16 would apply, who would make the  
 10 determination as to whether it was a legitimate  
 11 force majeure event for an unleased mineral  
 12 owner -- or an unleased surface owner on whom this  
 13 contract is being imposed by the Commission?  
 14 **A.** I'm sorry to ask the qualifying question.  
 15 Who would make the decision that the force majeure  
 16 event happened in an unleased landowner scenario?  
 17 **Q.** Yeah. Maybe a better way to ask it is to  
 18 whom should the landowner go to for relief in that  
 19 scenario, the Commission or a court?  
 20 **A.** I don't know.  
 21 **Q.** Okay. Let's look at Section 18. If a  
 22 landowner gives Summit a warranty of title and  
 23 someone else sues Summit saying I own that  
 24 property, not Joe over there, does a warranty of  
 25 title require that landowner to step in and defend

171

1 Summit and hire lawyers to defend them?

2 **A.** Technically, perhaps, but I'm not sure

3 that's how it works in general practice.

4 **Q.** But as a matter of law, that landowner who

5 gave the warranty of title is legally obligated to

6 provide a defense to Summit because that's

7 literally what the warranty is; right?

8 **A.** Sure. Yes.

9 **Q.** And Summit is asking the North Dakota

10 Industrial Commission to impose an obligation to

11 warrant title on a landowner; is that right?

12 **A.** I understand the question. Yes.

13 **Q.** That is right?

14 **A.** It is right.

15 **Q.** Do you understand how that would even be

16 possible as a lawyer? Because it starts to sound

17 like indentured servitude, doesn't it?

18 **A.** Wouldn't characterize it that far.

19 **Q.** On that spectrum?

20 **A.** My answer to warranty of title is

21 generally that, to be clear, common property law in

22 my experience in property law is that while, yes,

23 it does suggest that there be a duty to defend, it

24 means that your ownership, that you would stand by

25 that and support in the form of documentation or

172

1 otherwise that would show your ownership. So if

2 there was recorded deeds and everything was in

3 place, that would stand to -- you know, that would

4 stand as record title. If there were things such

5 as dresser-drawer deeds or deeds to others, late

6 filed or after death filed -- excuse me --

7 recorded, I think we're looking at those types of

8 warranties that they don't exist or that to the

9 extent that they're aware.

10 **Q.** But if you simply said the lessor hereby

11 represents that to the best of his knowledge he has

12 no dresser deeds or stray deeds and is not aware of

13 any unrecorded documents, that would all mean

14 exactly what you just said.

15 **A.** Mm-hmm.

16 **Q.** But then when you used the word "lessor

17 represents and warrants," that triggers all the

18 warranties of title and covenants of title that

19 includes a title warranty, that includes the

20 obligation to defend, that includes the obligation

21 to hire lawyers to defend Summit; right?

22 **A.** Fair.

23 **Q.** Does Summit believe that the Commission

24 can impose a warranty of title on an unwilling

25 landowner to warrant title to another person or

173

1 company or anyone? Is that what you're asking for?

2 **A.** I think it would make sense that to the

3 extent the lease indicates what you're suggesting,

4 a modification would make sense. That is not our

5 intention.

6 **Q.** But you agree that is what it says?

7 **A.** I don't necessarily agree. I would need

8 to look at it closely. I don't believe that was

9 the intention, but I understand the argument.

10 **Q.** I mean, it says, "Lessor hereby warrants

11 and agrees to defend title."

12 **A.** Yes, it does.

13 **Q.** Real quick, I just want to note that we

14 had a discussion just now about the warranty of

15 title and I didn't address that, but there is a

16 warranty as well in the storage agreement at 7.1.

17 Would you agree that similarly there it was not the

18 intent to impose a title warranty on individual

19 landowners to defend title for Summit?

20 **A.** Yeah. I think that's fair. And -- and

21 for the sake of the Commission to know and

22 understand that, typically the warranty and -- and,

23 again, this is in practice. If somebody else

24 claims that they own your land, we are asking that

25 you would stand up alongside us and say, no, I own

174

1 my land. And so that was the intention. I

2 understand the adjustments that may need to be made

3 for that purpose.

4 **Q.** Before I leave it again, in the storage

5 agreement at 10.1, there's a provision on Transfer

6 of Title. I'll let you get there.

7 **A.** Thank you. I'm sorry, I was taking notes.

8 Can you tell me where we're going?

9 **Q.** I think I sent us to the wrong place

10 anyway so that worked out. I'll come back to it,

11 but I do want to check on also to 10.2. It's on

12 page 13. Oh, sorry, I'm on a different one. I

13 don't know if my page numbers are the same, but

14 Section 10.2, Waiver of Rights to Partition.

15 Sort of a similar question, but with

16 respect to Section 10.2, are you asking the

17 Commission to issue an order that landowners have

18 no further rights in perpetuity to bring a

19 partition action of property?

20 **A.** No. So a modification may be required

21 there.

22 **Q.** And you'd agree that even if the

23 Commission had jurisdiction over an individual, it

24 doesn't have jurisdiction to bar partition actions

25 in perpetuity for a piece of property?

175

1     **A.** That's correct.

2     **Q.** Are you familiar with the process, just

3 generally, that occurs at the end of project and

4 upon certification to the State of North Dakota?

5     **A.** Yes.

6             MR. BOESHANS: Generally, yes.

7     **Q.** So in the Century Code 38-22-17, it says

8 that once a certificate is issued, title to the

9 storage facility and to the stored carbon dioxide

10 transfers without payment of any compensation to

11 the State. Are you just generally familiar with

12 that provision and what it means?

13     **A.** I am.

14     **Q.** And when that provision states title to

15 the storage facility and to the stored carbon

16 dioxide transfers, can you tell me how you

17 understand, and you not as a lawyer but you as

18 Summit, how -- or let me ask it better. How does

19 Summit understand the phrase "title to the storage

20 facility" and what that means?

21     **A.** I would say it is a transfer of the

22 leasehold rights as well as the stored CO<sub>2</sub>.

23     **Q.** And so would another way to say that be to

24 say that it transfers all property rights Summit

25 has in the storage facility to the State as well as

176

1 the stored CO<sub>2</sub>?

2     **A.** That is fair.

3     **Q.** Okay. Could one of the unleased

4 landowners market the CO<sub>2</sub> being stored?

5     **A.** No.

6     **Q.** Why not?

7     **A.** Under the terms of the lease and also

8 under the terms of the lease that we intend to ask

9 for in Exhibit D, ownership to the CO<sub>2</sub> in exchange

10 for the compensation belongs to Summit or in that

11 case the State.

12     **Q.** And if there were no lease, would the CO<sub>2</sub>

13 being put under land of an objecting landowner

14 eventually be abandoned there as a matter of law?

15 Well, let me ask a different question.

16             You indicated that a landowner couldn't

17 commercialize or market the CO<sub>2</sub> being stored there

18 and it's because of the provisions of the pore

19 space leases signed by individuals or by the

20 provisions of the Form of Pore Space Lease. If the

21 Commission didn't impose that Form of Pore Space

22 Lease on a landowner, would there be any barrier to

23 them pulling the CO<sub>2</sub> out and marketing it?

24     **A.** Legally or technically?

25     **Q.** Both. And I understand you can't

177

1 necessarily speak to all of them, but just whatever

2 you know.

3     **A.** To the extent -- so the storage and in

4 this case the removal would require the cooperation

5 of multiple landowners, and so I don't believe

6 technically they could without other agreements.

7     **Q.** Why couldn't a landowner put a well

8 directly under their own property into their own

9 pore space and just pull up whatever's there?

10     **A.** Because it would likely impact the

11 surrounding landowners depending upon -- I

12 understand the question. Yes, assuming it didn't

13 impact other landowners.

14     **Q.** Can I have you turn to Exhibit 1A to the

15 storage agreement and specifically to Exhibit D,

16 the Form of Pore Space Lease to the storage

17 agreement, and then specifically Section 25.

18     **A.** I am there.

19     **Q.** And 25 states Confidentiality and says,

20 "Lessor shall maintain in the strictest confidence,

21 for the benefit of Lessee, all information

22 pertaining to the compensation paid under this

23 Lease, any information regarding Lessee and its

24 business or operations on the Leased Premises or on

25 any other lands, the capacity and suitability of

178

1 any Reservoir or reservoirs and subsurface pore

2 spaces, stratum or strata unitized or amalgamated

3 therewith, and any other information that is deemed

4 proprietary or that Lessee requests or identifies

5 to be held confidential, in each such case whether

6 disclosed by Lessee or discovered by Lessor."

7             Is Summit asking the North Dakota

8 Industrial Commission to impose that prohibition on

9 free speech on unleased mineral owners and surface

10 owners?

11     **A.** We would strike that clause.

12     **Q.** Section 34 of that same document has an

13 insurance clause.

14             MR. BENDER: We'd be willing to strike

15 that.

16             MR. BRAATEN: Okay. I guess that gets rid

17 of all my questions.

18     **Q.** (MR. BRAATEN CONTINUING) No. So I have a

19 specific one. Is the intent here that the million

20 dollar limit is a limit in place with respect to

21 that tract in that lease or a million dollar limit

22 for the entire project?

23     **A.** I'm not sure.

24     **Q.** Okay. Is Summit only maintaining an

25 insurance policy with a million dollar limit for

179

1 this project?

2 **A.** (BY MR. BOESHANS) No.

3 **Q.** Okay. And so just to follow up, this

4 provision is not indicative of what Summit's actual

5 insurance levels are but rather what they're

6 providing within a contract as a contractual

7 obligation that they will take on for a landowner;

8 is that fair?

9 **A.** I think that's fair, yes.

10 **Q.** Okay.

11 HEARING EXAMINER GARNER: I think now's

12 probably a good time to take another ten-minute

13 break.

14 MR. BRAATEN: Sure. Thank you.

15 HEARING EXAMINER GARNER: We're off the

16 record.

17 (Recessed at 3:03 p.m. and reconvened at

18 3:18 p.m.)

19 HEARING EXAMINER GARNER: We are back on

20 the record. Mr. Braaten, you were questioning

21 Summit's witnesses.

22 MR. BRAATEN: Thank you, Your Honor.

23 **Q.** (MR. BRAATEN CONTINUING) So back to the

24 insurance provision. Would Summit do a waiver of

25 subrogation with respect to the insurance it's

180

1 carrying for the landowners?

2 **A.** (BY MR. SKAARE) Yeah, I believe we could.

3 **Q.** And would that apply to both the

4 landowners and their renters?

5 **A.** Well, so waiving rights of subrogation

6 would prevent any insurance company from recovering

7 from who is legally held liable.

8 **Q.** But just as to the landowner and their

9 renter is what I'm asking.

10 **A.** I think we could consider that, yes.

11 **Q.** And would that be a change, then, to

12 the -- both the Exhibit D form lease as well as the

13 section in the storage agreement we talked about?

14 Wait. Now I confused myself. Never mind.

15 I'm just talking about Section 34 of the

16 Exhibit D. Is that a change that could be made

17 there?

18 **A.** I believe we could present something to

19 that effect.

20 **Q.** Would the commercial general liability

21 insurance cover -- that's referenced in Section 34

22 here cover pollution events or contamination

23 events?

24 **A.** I am not sure.

25 **Q.** Is that something that Summit is willing

181

1 to have insurance for that covers the landowners?

2 **A.** I believe we've indemnified under

3 paragraph 11 --

4 **Q.** Okay.

5 **A.** -- for those same purposes.

6 **Q.** If that's true, is it fair to assume that

7 you do have insurance for that?

8 **A.** I would believe we do, yes.

9 **Q.** And so with respect to whatever insurance

10 policy Summit has for pollution and contamination

11 events, can it add the landowners who own the

12 property as additional insureds on those policies?

13 **A.** Subject to that language, I think we could

14 add as additional named insureds. Let me verify

15 that with my team.

16 **Q.** I understand.

17 **A.** There is a legal term of art there that I

18 would need to address with my legal team.

19 **Q.** Okay. Is there a reason for -- well, let

20 me ask: With respect to Section 34 and the million

21 dollar liability limit, is Summit putting in place

22 a separate insurance policy for each tract?

23 **A.** No, I don't believe that to be the case.

24 **Q.** Okay. So is there one insurance policy

25 covering all tracts of land with a million dollar

182

1 limit?

2 **A.** I believe the limit's -- yes, there is a

3 policy.

4 **Q.** Okay. And can Summit add the landowners

5 to its general liability policy as additional

6 insureds?

7 **A.** I would need to talk to our legal team.

8 **Q.** Okay. Does that seem like a fair thing to

9 do if you're forcing those landowners into this

10 facility to take on that risk without any choice in

11 the matter?

12 **A.** I think it seems fair, yeah.

13 **Q.** We were looking at the application earlier

14 at I think PS-5. Yeah, if you could look at the

15 application, page PS-5 with the diagram on it.

16 It's Figure PS-3, project summary map. We talked a

17 little bit about the facilities and I'm going to

18 talk about the facilities after the terminus point,

19 and when I say that, what I mean is essentially

20 everything downstream from the Midwest Carbon

21 Express Pipeline.

22 So after that terminus point, we talked

23 about flowlines. We talked about a valve station

24 at the terminus point and obviously there's the

25 Class VI injector wells. What other surface

183

1 facilities will you have, if any, other than the  
 2 ones I just mentioned downstream from that terminus  
 3 point?  
 4 **A.** (BY MR. BOESHANS) Sure. There's --  
 5 that's going to be covered in Section 5 of the  
 6 application and there's a diagram in there. It'll  
 7 be testified here later when we get to that  
 8 section. But, generally speaking, there's a  
 9 launcher receiver there. There's metering and  
 10 measurement, there's -- as well as -- as I recall,  
 11 but, anyway, we'll get into the system layout in  
 12 Section 5.  
 13 **Q.** And is that one of the folks from EERC  
 14 that'll be covering that?  
 15 **A.** It will be a person from EERC along with  
 16 Jimmy Powell, our chief operating officer.  
 17 **Q.** Okay. And I see that you have positive  
 18 manual shutoff valves, emergency shutoff valves, a  
 19 blow-down, a pressure control valve, some check  
 20 valves and block valves. Have you done any kind of  
 21 modeling or investigation or research into the  
 22 safety aspects of those valves and what happens  
 23 with a valve failure?  
 24 **A.** Yeah, again, I'm going to defer those to  
 25 Jimmy and the team that comes up here for that

184

1 specific section.  
 2 **Q.** If I have questions about performing LOPA,  
 3 or level of protection analysis, or hazard and  
 4 operability study, would those also be questions  
 5 for those same folks?  
 6 **A.** That's correct.  
 7 **Q.** I'm going to have you go back up to  
 8 Section 3.9 of the storage agreement within the  
 9 application. We were talking earlier about  
 10 Exhibits B and C to the storage agreement and the  
 11 tract participation factors, and I think I was  
 12 asking if the participation factor was the  
 13 percentage of acreage owned proportionately within  
 14 the storage facility. Is that the proportionate  
 15 acreage owned in that particular storage facility,  
 16 being the Hintz or the Leingang or the BK Fischer?  
 17 **A.** (BY MR. SKAARE) I believe I understood  
 18 your question. I believe the answer is yes. That  
 19 was a little long.  
 20 **Q.** So in Sections 3.7, 3.8 and 3.9 of the  
 21 storage agreement, there's a discussion of transfer  
 22 of storage substances from one storage facility to  
 23 another. And it says that this is allowed when the  
 24 ownership between the storage facility and the  
 25 transfer storage facility is common. What do you

185

1 mean by -- or what does this contract or storage  
 2 agreement mean when it says the ownership between  
 3 the storage facility and the transfer storage  
 4 facility is common?  
 5 **A.** It's not intended to talk about a storage  
 6 facility that is adjacent to each other. It is  
 7 intended to talk about the storage facilities that  
 8 may be in a stacked play.  
 9 **Q.** Okay. Makes a lot more sense that way.  
 10 **A.** It does.  
 11 **Q.** And so this provision doesn't -- or  
 12 wouldn't have any applicability unless and until  
 13 Summit were to permit an additional storage  
 14 facility in a formation above or below the  
 15 formation it's targeting with these proceedings?  
 16 **A.** That is correct.  
 17 **Q.** Okay. Did any of the landowners attempt  
 18 to limit the scope of their lease vertically based  
 19 on the formation being targeted?  
 20 **A.** If you recall, that was a request that you  
 21 made.  
 22 **Q.** Okay. Did -- did any other landowners  
 23 make a request to limit vertically the scope of the  
 24 lease with Summit?  
 25 **A.** No.

186

1 **Q.** Okay. Do you have all of the agreements  
 2 and rights under contract necessary for any surface  
 3 facilities planned at present?  
 4 **A.** Yes.  
 5 **Q.** There was some discussion earlier about  
 6 the boundary lines for both the CO<sub>2</sub> plume as well as  
 7 the storage facility boundaries.  
 8 **A.** Mm-hmm.  
 9 **Q.** Do you have an understanding of why the  
 10 storage facility boundary is required to be drawn  
 11 outside of the CO<sub>2</sub> plume?  
 12 **A.** (BY MR. BOESHANS) Yes. My understanding  
 13 of why the storage boundary is outside of the CO<sub>2</sub> is  
 14 so that, you know, kind of per the requirements of  
 15 the permit, we're required to operate within the  
 16 boundary that we're permitted to operate in. Okay.  
 17 And so we use the methodology described to  
 18 determine a boundary, you know, with the  
 19 understanding there's five-year review and renewal  
 20 and adjustment. So we've identified the boundary  
 21 in our case of outside of the post-injection  
 22 stabilized plume area, so --  
 23 **Q.** Is it your position or belief that the  
 24 area of the reservoir in which you are operating is  
 25 confined to the area of the reservoir into which

187

1 you are physically injecting CO<sub>2</sub> and it is existing  
 2 in the reservoir thereafter?  
 3 **A.** Say that again so I under -- make sure I  
 4 got the question.  
 5 MR. BRAATEN: Could I have you read it  
 6 back.  
 7 (Record read as requested.)  
 8 MR. BENDER: I don't think that the  
 9 question's clear. I think it's ambiguous. You  
 10 aren't talking about whether you're talking about  
 11 the areal extent, you're talking about vertical.  
 12 So I don't know that he can answer without you  
 13 being specific.  
 14 **Q.** (MR. BRAATEN CONTINUING) Okay. Well, let  
 15 me just take another run at it.  
 16 MR. BENDER: What I'm getting at is  
 17 there's vertical limits and horizontal limits,  
 18 and --  
 19 MR. BRAATEN: Right.  
 20 MR. BENDER: -- you haven't defined --  
 21 perhaps you want him to answer both. I don't know.  
 22 MR. BRAATEN: Yeah. No. That's fair.  
 23 **Q.** (MR. BRAATEN CONTINUING) So let's confine  
 24 my question to within -- in between -- vertically  
 25 in between the confining layers as defined by the

188

1 application. So when I am talking about the  
 2 reservoir for this question, it's in between the  
 3 confining layers. And we'll call that the target  
 4 reservoir.  
 5 **A.** Mm-hmm.  
 6 **Q.** Is it your position or belief that  
 7 Summit's operations are confined to that part of  
 8 the target reservoir containing actual CO<sub>2</sub> that was  
 9 injected by Summit?  
 10 **A.** It's my understanding and belief that in  
 11 our application we're requesting a permit to store  
 12 CO<sub>2</sub> in that -- in this case the Broom Creek  
 13 Formation and the confining layers above and below.  
 14 If that's what you mean by operations is the  
 15 storage of CO<sub>2</sub>, then I would say yes.  
 16 **Q.** What else constitutes your operations  
 17 other than the storage of CO<sub>2</sub> downhole from the well  
 18 injectors?  
 19 **A.** So we have monitoring of various, you  
 20 know, reservoir formations, monitoring equipment  
 21 along the well, monitoring of the plume using 3D  
 22 seismic, for example, and so those are all parts of  
 23 what I would say the operations is the monitoring  
 24 of the activities of the well which we're  
 25 monitoring outside of the storage horizons.

189

1 **Q.** Why are you monitoring outside of the  
 2 storage horizon?  
 3 **A.** To confirm -- confirm storage or permits,  
 4 if you will.  
 5 **Q.** Are you monitoring anything other than the  
 6 chemical makeup of the fluids in the reservoir, the  
 7 target reservoir?  
 8 **A.** So we're going to get into that, you know,  
 9 extensively in the monitoring plan, of course. You  
 10 know, we're -- we're monitoring, you know, water  
 11 quality at various horizons which will be  
 12 identified in the monitoring plan. We are  
 13 monitoring the plume movement over time, and that's  
 14 covered in the monitoring plan as well.  
 15 **Q.** How do you monitor --  
 16 **A.** We're monitoring the -- or monitoring the  
 17 wellbore and doing inspections on the wellbore,  
 18 those kinds of things.  
 19 **Q.** How do you monitor the movement of the  
 20 plume?  
 21 **A.** We're proposing again in our monitor plan,  
 22 which we'll get into that in detail, but we're  
 23 planning to monitor it incrementally using -- or  
 24 periodically using 3D seismic as our current --  
 25 current proposal.

190

1 **Q.** Does any of your monitoring look at the  
 2 pressures in the formation?  
 3 **A.** Yes. There is -- or there are pressure  
 4 temperature sensors within the -- within the  
 5 wellbore.  
 6 **Q.** Do you get data on temperature and  
 7 pressure anywhere other than at the wellbore?  
 8 **A.** We will also get that in the deep  
 9 subsurface monitoring wells, stratigraphic wells  
 10 that are identified on -- what is it, PS-3 or 4.  
 11 **Q.** How many of those do you have?  
 12 **A.** We have three.  
 13 **Q.** Three stratigraphic -- stratigraphic test  
 14 wells?  
 15 **A.** Well, monitoring wells, yeah.  
 16 **Q.** Okay. How many total monitors do you have  
 17 for temperature and pressure within the reservoir?  
 18 **A.** So I'll defer that to the discussion on  
 19 monitoring because I don't -- but we have them on  
 20 the stratigraphic wells, as I mentioned, deep  
 21 stratigraphic monitoring wells.  
 22 **Q.** Why are you monitoring the temperature and  
 23 pressures in the reservoir?  
 24 **A.** Again, I'm going to defer to the -- to the  
 25 team that presents the monitoring plan to give you

191

1 the specifics on the recommendations and why we're  
2 doing that.

3 Q. Do you know what the Safe Drinking Water  
4 Act says about where to place the boundaries for  
5 your storage facility?

6 A. I do not specifically.

7 Q. Do you think that the boundaries as  
8 defined by the Safe Drinking Water Act for the  
9 protection of freshwater aquifers is the same as  
10 the area within which you need to obtain property  
11 rights for your project?

12 A. Say that again.

13 Q. Do you believe that the area required to  
14 be used for a storage facility in the Safe Drinking  
15 Water Act is the same as the area within which you  
16 need to acquire property rights for your project?

17 A. I would say I don't specifically know  
18 that.

19 Q. Who would know that?

20 A. (BY MR. SKAARE) So if I can ask, are you  
21 asking if the Safe Water Drinking Act applies?

22 Q. No. I'm asking if the boundaries required  
23 by the Safe Drinking Water Act are the same as the  
24 boundary around the property rights that you needed  
25 to acquire for your project?

192

1 MR. BENDER: We have another witness that  
2 we're going to call who will be able to answer that  
3 question.

4 Q. (MR. BRAATEN CONTINUING) You guys don't  
5 know the answer?

6 A. I'm not sure I understand the question.

7 MR. BRAATEN: I have nothing further.

8 HEARING EXAMINER GARNER: Any questions  
9 from the staff?

**EXAMINATION**

10 **BY MS. MADCHE:**

11 Q. I'll jump in here first. Just as a  
12 preamble before I start asking my questions,  
13 because we are listening to these as combined cases  
14 for all three applications, if I ask a question and  
15 it applies to all three, by all means provide the  
16 answer for each individual one. I'll try to  
17 clarify if I think there's going to be a question  
18 that would be more consistent across all three or  
19 an individual question.

20 And to start out, my questions here I'm  
21 going to be talking about are within the Project  
22 Summary section of the three applications.

23 So in your Exhibit 2A through 2C that you  
24 had provided showing the business structure for the  
25

193

1 three LLCs, I just want to have you clarify that  
2 when you have SCS Carbon Transport LLC listed as  
3 the flowline operator, that you are intending to  
4 mean that the three flowlines for these three  
5 facilities will be operated by SCS Carbon Transport  
6 LLC but the ownership will still be under the  
7 individual Summit Carbon Storage, LLCs; is that  
8 correct?

9 A. (BY MR. BOESHANS) That's correct.

10 Q. You currently stated that you have 57  
11 ethanol plants with contracts on. Is it fair to  
12 state at this time all of those ethanol plants are  
13 currently emitting all of their CO<sub>2</sub> production that  
14 they make?

15 A. Yes, to the best of my knowledge.

16 Q. How many miles of MCE pipeline, the  
17 transmission pipeline, is within the PSC  
18 jurisdiction in North Dakota?

19 A. So there's -- okay. You're asking how  
20 many miles within the --

21 Q. Of the transmission pipeline, how many  
22 miles are in North Dakota that would be under PSC  
23 jurisdiction?

24 A. I'm going to defer to Jimmy on that  
25 question. My recollection is it's 352 miles, but,

194

1 again, that -- I want to make sure that we get the  
2 right number.

3 Q. On page PS-3 of all three applications,  
4 you report that the three storage facilities  
5 combined over a 20-year proposed injection period  
6 were modeled to be able to store approximately 352  
7 million metric tons of carbon dioxide which would  
8 be on average around 17.6 million metric tons a  
9 year. Additionally, later on on that page you  
10 state that the Midwest Carbon Express, the MCE  
11 transmission pipeline, is being designed to  
12 transport 18 million metric tons a year. Can you  
13 provide approximately how many metric tons you  
14 currently have contracts for?

15 A. Yes. Couple of things there. The current  
16 design of the MCE pipeline system is 18 and a half  
17 million metric tons. With the 57 plants we have  
18 approximately 16 million tons -- or they emit  
19 approximately 16 million tons that could be  
20 captured.

21 Q. And as a follow-up to that, if you ended  
22 up getting to a point where you have contracts with  
23 a value that is up to what your current design is  
24 for the MCE pipeline, would you just be looking at  
25 additional storage facilities to be permitted to

195

1 take on the additional capacity?

2 **A.** That's correct.

3 MS. MADCHE: Those are the only questions

4 I have for this group. Thank you.

5 **EXAMINATION**

6 **BY MR. STOLLDORF:**

7 **Q.** I'm going to talk a little bit about

8 Section 1 of the pore space to start off with, and,

9 again, some of these answers may relate to SCS2 and

10 3. Please answer for all of them if you can.

11 Within the proposed storage facility area

12 shown, it's both Figure 1-1 on page 1-2, or it's

13 Exhibit A, the tract map of the storage agreement.

14 In relation to that, has any pore space been

15 severed from the surface estate since April 9,

16 2009?

17 **A.** (BY MR. SKAARE) No.

18 **Q.** Is that the case for SCS2 and 3 -- 1, 2

19 and 3?

20 **A.** That is the case for all three units.

21 **Q.** Was any pore space leased from the surface

22 owner prior to Summit leasing of the storage

23 facility?

24 **A.** No, for all three units.

25 **Q.** Is the storage facility and proposed well

196

1 sites, testing and monitor equipment, flowline --

2 and flowline located on or proposed to be located

3 on any Indian lands, historic or archeological

4 sites?

5 **A.** (BY MR. BOESHANS) No.

6 **Q.** Okay. And is that for all of them?

7 **A.** Yes, for all three.

8 **Q.** Have you guys seen the written comments

9 from the North Dakota State Historical Preservation

10 Office that was sent on May 15, 2024?

11 **A.** (BY MR. SKAARE) I have.

12 **Q.** And do you intend to meet their requests?

13 **A.** We do.

14 **Q.** Will the development or operations of the

15 storage facility affect hydrocarbons, coal reserves

16 or any other potential mineral zones?

17 **MR. BENDER:** The next witness will handle

18 that question.

19 **Q.** (MR. STOLLDORF CONTINUING) Okay. I will

20 defer -- based on that answer, I will defer a

21 couple questions and go to a couple of errors we

22 found on the land descriptions.

23 **A.** Okay.

24 **Q.** The -- provided as part of the storage

25 facility area, a document called the Unit Legal

197

1 Description for KJ Hintz, we'll need an amended

2 copy. The errors are in Township 142 North, Range

3 85 West, Section 7. It's listed as all of this

4 section is within the storage facility area. This

5 instead appears to be the west half and the west

6 half of the northeast quarter, the northwest

7 quarter of the southeast quarter and the south half

8 of the southeast quarter. Did you catch all that?

9 **MR. BENDER:** Do you have tract numbers?

10 **MR. STOLLDORF:** No, but we could pull them

11 up.

12 **Q.** (MR. STOLLDORF CONTINUING) And then the

13 second one is Township 142 North, Range 86 West,

14 Section 25 where it states the east half of the

15 northeast quarter. This instead appears to be the

16 west half of the northeast quarter.

17 **A.** Understood.

18 **Q.** And that is all for that section. Oh, no.

19 No. I've got a couple more.

20 **MR. STOLLDORF:** Did you find that tract?

21 **MS. MADCHE:** I'll keep looking.

22 **MR. STOLLDORF:** Okay.

23 **Q.** (MR. STOLLDORF CONTINUING) Now we'll move

24 on to the storage agreement. And Article 1.1

25 defines carbon dioxide as including incidental

198

1 associated substances following the definition of

2 carbon dioxide stream from North Dakota

3 Administrative Code Chapter 43-05-01. In the pore

4 space lease section, 3, royalty, page D-2, carbon

5 dioxides -- CO<sub>2</sub> or carbon dioxides is called out.

6 Is -- the question is is payment based on

7 the mass of the CO<sub>2</sub> component of the stream only or

8 the full injection stream mass including

9 incidental?

10 **A.** I believe it is on the full stream, but

11 there is someone better able to answer that

12 question.

13 **Q.** Okay. Can you briefly explain why you

14 used the Milton Flemmer 1 as the type log in

15 Article 1.15 for all three storage agreements?

16 **MR. BENDER:** We'll have another witness

17 who can answer that question.

18 **MR. STOLLDORF:** Okay. I think that's --

19 sorry, I'm moving to a different question based on

20 your answer.

21 **Q.** (MR. STOLLDORF CONTINUING) I'm going to

22 move to Article 5, Tract Participations. In the

23 storage agreement you indicate the tract

24 participation is based a hundred percent upon the

25 ratio of surface acreage within the facility area.

199

1 Can you explain the reasoning behind using land  
2 basis rather than pore volume?

3 **A.** Sure. We believe that using a tract basis  
4 provides an equitable method for compensating all  
5 landowners based upon the life of the project.

6 **Q.** In Article 8, you touched on some of these  
7 things earlier in cross-examination. Just a couple  
8 things I wanted to clarify. That this use of  
9 the -- the activities this is going to cover  
10 includes like the location of monitoring equipment  
11 for soil, gas, Fox Hills groundwater wells and also  
12 any seismic equipment or activity?

13 **A.** That is correct.

14 **Q.** Okay.

15 **A.** And for the Commission's understanding,  
16 we'll continue to work as we have with willing  
17 landowners for every opportunity.

18 **MR. STOLLDORE:** Okay. I think that's all  
19 I have for that section and you guys.

20 **MS. MADCHE:** So just to jump in, for the  
21 two corrections, the first one was in tract 23.  
22 The second one is tract 56.

23 **MR. BENDER:** Thank you for that.

24  
25

200

1 **FURTHER EXAMINATION**

2 **BY MS. MADCHE:**

3 **Q.** And just one additional item in the  
4 storage agreement and the pore space lease  
5 agreement. There is a note, so in Article 1.15  
6 you're currently defining the storage reservoir is  
7 including both the upper and lower confining zone  
8 in addition to the injection zone, and then in  
9 Article 3.6 where you talk about injection rights,  
10 it states, The storage operator is granted to  
11 inject into the storage reservoir any storage  
12 substances in whatever amounts the storage operator  
13 may deem necessary.

14 I just want to clarify, again, that the  
15 injection and storage of CO<sub>2</sub> should only occur  
16 within the injection zone and not within the  
17 confining zones.

18 **A.** (BY MR. BOESHANS) Yeah. Understood.

19 **MS. MADCHE:** Thank you.

20 **EXAMINATION**

21 **BY MR. SUGGS:**

22 **Q.** All right. I'll try to bat cleanup here.  
23 A couple of things. First, there were a number of  
24 items that were discussed through the surface use  
25 agreement and the lease attached to Exhibit D as

201

1 possible amendments to language within both. I  
2 guess at this time I'm going to ask that whatever  
3 that amended language is proposed to be, that it be  
4 worked up and submitted as a supplemental.

5 And that -- I've got a -- I don't know if  
6 it's a complete list, but there was a discussion  
7 on -- so in the surface agreement it would be 3.3,  
8 2.4, 7.1, 10.2 and 8.1, and then I think 25 and 34  
9 of Exhibit D is what I caught. I might have missed  
10 a couple.

11 **A.** (BY MR. SKAARE) Would you mind repeating  
12 that so I can cross-reference my notes?

13 **Q.** Okay. All right. So I had notes on  
14 3.3 -- so surface agreement -- I'll start with  
15 surface agreement, 3.3, 2.4, 7.1, 10.2 and 8.1.

16 **A.** That matches.

17 **Q.** And then in the Exhibit D, I had Article  
18 24 and 34?

19 **A.** That matches my notes.

20 **Q.** I'm also going to request -- the court  
21 reporter is currently working up a transcript. I'm  
22 going to request that the transcript be provided as  
23 a supplemental exhibit after the hearing.

24 Wade, specifically, there was a fair  
25 amount of discussion as to the economics and the

202

1 effect that this project would have on the North  
2 Dakota economy. And per your preamble in the  
3 project summary on PS-3, you indicate that the CO<sub>2</sub>  
4 storage is critical to both agriculture and energy  
5 industries in North Dakota. Is it your intent at  
6 this time that the Commission will make a  
7 determination with respect to 43-05-01-17 and the  
8 fees required for submission -- or for injection of  
9 CO<sub>2</sub> and whether or not those fees shall be charged  
10 pursuant to part A of that or part B, part A being  
11 they contribute to the North Dakota energy or  
12 agricultural economies, and part B, they don't? Is  
13 it your -- so the question is are you requesting  
14 that that determination be made as a part of this  
15 hearing?

16 **A.** (BY MR. BOESHANS) Yeah, our request is  
17 that the Commission make the determination on  
18 Summit's project part A or part B.

19 **Q.** And you understand that if the  
20 determination were to be that it did not contribute  
21 and was subject to 1B, that we would need a  
22 supplemental -- or not a supplemental -- subsequent  
23 hearing to determine what those fees should be set  
24 at?

25 **A.** I do understand that, yes.

203

1 Q. With respect to that request, I'm going to  
 2 ask for another supplement of what you provided as  
 3 Exhibit 3A identifying, I guess, each of the  
 4 capture facilities that you have identified there  
 5 and where their locations are. It's probably  
 6 sufficient just to indicate which states they're in  
 7 or just number them and give us the name so we can  
 8 determine whether or not they're -- where exactly  
 9 they are.

10 A. Understood.

11 Q. With respect to the cases on the docket  
 12 for the establishment of the pool and field  
 13 boundaries associated with these facilities,  
 14 does -- does Summit have any opposition or any  
 15 concern if the field boundaries are established as  
 16 the facility area boundaries, and the storage  
 17 reservoir or pool defined in those would be  
 18 equivalent to the storage area as proposed in the  
 19 surface use agreement?

20 A. No.

21 Q. I'm going to ask this here, though it may  
 22 be appropriate for another witness. On your Figure  
 23 1-1, page 1-2, this is the map illustrating the  
 24 pore space. Looking at Section 35 and 141-88, it  
 25 would look like the plume boundary is almost

204

1 equivalent if not at the exact same point as the  
 2 storage facility boundary. The line appears to be  
 3 at the same spot.

4 A. So can you say the diagram you're looking  
 5 at again?

6 Q. So Figure 1-1, it's on page 1-2 of the  
 7 application.

8 A. Okay. Yes. I have it now.

9 Q. And, again, so Township 141, Range 88,  
 10 Section 35, there's a little portion of the  
 11 identified stabilized CO<sub>2</sub> plume extent that is at  
 12 the same point as the storage facility area -- at  
 13 the line that the storage facility area identifies.  
 14 So it looks like there's no buffer there. Is that  
 15 intentional or is that something that should be  
 16 directed at another witness?

17 A. Yeah, we have another witness that can  
 18 testify to the specifics, but there is a buffer  
 19 there.

20 Q. Okay. Do you know what that buffer is?

21 A. We'll have another witness testify exactly  
 22 the buffer.

23 Q. And would the other witness also be the  
 24 person to direct the odd shape of the plume? So  
 25 when I say "the odd shape of the plume," there's a

205

1 little carveout in the middle. It looks like no CO<sub>2</sub>  
 2 is going to affect that central area.

3 A. Yes. I think we'll defer that to the next  
 4 section here --

5 Q. Next group.

6 A. -- the geologic modeling and simulations,  
 7 to answer that.

8 Q. Okay. There was a fair bit of discussion  
 9 on Section 8 of the storage agreement. And I just  
 10 want to point out that, I guess, there's -- Article  
 11 8.3 within -- within there indicates that the  
 12 damages will be paid to any surface owners  
 13 disturbed at the surface; is that correct?

14 A. (BY MR. SKAARE) That is correct.

15 Q. One minor typo in the surface use  
 16 agreement, Article 15.1, I believe the title of  
 17 that section should be bolded and underlined.

18 A. (BY MR. BOESHANS) Oh, Term?

19 Q. Yep. Single word.

20 Article 16.2 on page 15 of the storage  
 21 agreement, I'm not a lawyer so I'm just looking for  
 22 what this language means. The joinder and dual  
 23 capacity language here, I don't really want to  
 24 quote it at you -- I think you can read it  
 25 yourself -- but what is the intent of that article

206

1 and specifically with respect to the "and any  
 2 additional interest thereafter acquired" language?

3 MR. BENDER: Do you want me to take a  
 4 crack at it?

5 MR. SUGGS: I don't care who answers it.

6 MR. BENDER: You don't have any objection?

7 MR. BRAATEN: No.

8 MR. BENDER: If there were a situation  
 9 where the operator, Summit, who is the operator,  
 10 and also owned an interest in the pore space, by  
 11 executing the storage agreement, they'd be  
 12 executing basically as both parties, both as an  
 13 operator and as an owner of the pore space.

14 MR. SUGGS: So with that explanation, it  
 15 would have nothing to do with anything that a  
 16 landowner acquired after the point at which they  
 17 executed?

18 MR. BENDER: I don't believe so. It would  
 19 be -- it -- it would apply to a situation, though,  
 20 if Summit were to sign this as a -- as a joint  
 21 owner and then acquired additional surface  
 22 interests, that surface interest would then be  
 23 basically agreed upon with this language. If -- if  
 24 that's something you -- I don't know that it's --  
 25 it's certainly not necessary in -- in this

207

1 agreement, so it's something that I can speak with  
 2 my clients and see if we can't get it resolved.  
 3 MR. SUGGS: Okay. Add that to the list of  
 4 supplemental language adjustments.  
 5 MR. BENDER: Okay.  
 6 MR. SUGGS: Okay. That's all I've got.  
 7 Thank you.

**EXAMINATION**

9 **BY MR. BOHRER:**  
 10 Q. Just a couple quick questions, Jeff, on  
 11 Exhibit 5A, if you go to page B-3. That would be  
 12 as good as any.  
 13 A. (BY MR. SKAARE) And what page was that?  
 14 Q. B-3. On the very right column there's  
 15 blank columns, and we'll look at tract number 8, in  
 16 the life estate those columns are filled out all  
 17 the way across, and then there's four blank ones  
 18 there. What's the -- what's the meaning of that --  
 19 those interests or whatever they are with basically  
 20 zero participation?  
 21 A. Sure. So as you look specifically on page  
 22 B-3, tract number 8, JoAnne Skalsky owns a life  
 23 estate. The -- the parties listed below her are  
 24 the remaindermen such that upon her death, they  
 25 gain the interest in the property.

208

1 Q. Okay.  
 2 A. And so we joined them in our pore space  
 3 lease because they own a future interest.  
 4 Q. Okay. And then with your no surface  
 5 facility, no surface occupancy discussion and any  
 6 amendments that may take place with that, would it  
 7 be your intent that that language would not  
 8 preclude Summit from conducting future seismic  
 9 operations?  
 10 A. That is correct. It is a no surface  
 11 facilities.  
 12 MR. BOHRER: Thank you.  
 13 MR. SUGGS: Apologies, I do have two more  
 14 things to address.

**FURTHER EXAMINATION**

16 **BY MR. SUGGS:**  
 17 Q. There was a fair bit of discussion about  
 18 the NAICS code, the industrial codes. The  
 19 provision in the rules, 43-05-01-07, it's part 3.c  
 20 indicates that four standard industrial  
 21 classification codes which best reflect the  
 22 principal products or services provided by the  
 23 facility shall be provided as part of the  
 24 application. To date, the codes that have been  
 25 provided for other facilities have listed either

209

1 the ethanol facility -- that have been related to  
 2 the ethanol facility that was being used or the  
 3 industrial entity as the source of the CO<sub>2</sub> in the  
 4 case of DGC. I don't recall what it was, but it  
 5 was related to the synfuels plant.  
 6 The code you provided would indicate it  
 7 was pipeline related as the source of the CO<sub>2</sub> as far  
 8 as the sequestration facilities were concerned. Do  
 9 you have the code or do you know what it is or can  
 10 you supply it for ethanol facilities as the source  
 11 of the CO<sub>2</sub>?  
 12 A. (BY MR. BOESHANS) We could supply it. I  
 13 don't have it.  
 14 Q. We'll probably request that. If another  
 15 witness doesn't have it available, we'll request  
 16 that that probably be provided as well as the  
 17 potential -- well, at this time you're not  
 18 including the alternate source of the CO<sub>2</sub> as the --  
 19 MR. BENDER: Mr. Suggs, one of our  
 20 witnesses is going to talk about Section 12 in  
 21 the -- in the application. He would be the witness  
 22 to address the question about the codes.  
 23 MR. SUGGS: Okay. That's fine. We'll --  
 24 we'll hit it there then.  
 25 Q. (MR. SUGGS CONTINUING) And then one --

210

1 one more, I guess, piece of clarification. When  
 2 you were being questioned, Wade, regarding the  
 3 model and what was submitted to the Commission, you  
 4 indicated that the model had been submitted to the  
 5 Commission, the whole model. Point of just  
 6 clarification, what is submitted to the Commission  
 7 is the numerical simulation in the GEM software  
 8 which includes the model as it was imported from  
 9 the geologic model that the EERC developed in  
 10 Petre -- or Petrel. Sorry. So we don't have the  
 11 whole geologic model. What we have is the version  
 12 of it that comes in through the numerical  
 13 simulation. So just a point of clarification on  
 14 that testimony.  
 15 A. Yeah. That's my understanding as well,  
 16 and certainly Amanda can testify on more specifics  
 17 as needed related to what was submitted to the DMR  
 18 in that regard.  
 19 MR. SUGGS: And that's all I've got.  
 20 Thank you.  
 21 HEARING EXAMINER GARNER: Any redirect,  
 22 Attorney Bender?  
 23 MR. BENDER: No redirect.  
 24 HEARING EXAMINER GARNER: Okay. Call your  
 25 next witness.

211

1 MR. BENDER: Okay. We'll be calling  
2 Amanda Douglas and Caitlin Olsen.  
3 HEARING EXAMINER GARNER: Okay.  
4 Ms. Douglas, please raise your right hand.  
5 **AMANDA DOUGLAS,**  
6 being first duly sworn, was examined and testified  
7 as follows:  
8 **DIRECT EXAMINATION**  
9 **BY MR. BENDER:**  
10 Q. Amanda, state your full name for the  
11 record, please.  
12 A. Amanda Jordan Douglas. I'd just like to  
13 note that I do go by Amanda Livers-Douglas, so you  
14 may hear that as well today.  
15 Q. And, Amanda, by whom are you employed by?  
16 A. The Energy & Environmental Research Center  
17 at the University of North Dakota.  
18 Q. In what capacity?  
19 A. So I'm an assistant director for  
20 integrated subsurface projects.  
21 Q. Can you explain just very briefly what  
22 that title includes in terms of your role with  
23 EERC?  
24 A. Yes. So I oversee and manage the  
25 collection of geophysical and geologic

212

1 characterization data. I also manage and serve as  
2 an advisor on commercial, carbon capture and  
3 storage development projects. I also oversee and  
4 manage a team of geoscientists, including ten  
5 geologic modelers.  
6 Q. Okay. And I'd like you to highlight for  
7 us your educational background and work experience.  
8 A. I have a bachelor's from -- in physics  
9 from Concordia College in Moorhead, Minnesota, and  
10 I have a master's in geology from the University of  
11 Kansas.  
12 My work experience includes three years as  
13 a graduate research assistant at the Kansas  
14 Geological Survey where I worked on a professional  
15 seismic crew, and eight years of employment at the  
16 EERC.  
17 Q. Amanda, what are some of your duties and  
18 responsibilities with respect to your employment  
19 with EERC generally and specifically with respect  
20 to the project that's before us today -- or  
21 projects?  
22 A. So as previously stated, my roles at the  
23 EERC with respect to this project in particular, I  
24 oversaw the development of several sections of the  
25 storage facility permit application. I also

213

1 advised on data collection as well as geologic  
2 modeling and simulation.  
3 Q. And it's my understanding that you had  
4 direct involvement in Sections 2 and 3 as well as  
5 Appendix C; is that correct?  
6 A. That's correct.  
7 Q. Okay. Let's turn your attention to  
8 Sections 2 and 3 of the application. Can you  
9 provide us with a brief overview of what your  
10 testimony will cover?  
11 A. Yes. So I'll be providing a high-level  
12 overview of the key takeaways from Section 2, 3 and  
13 associated appendices which are Appendix A and C.  
14 Q. Okay. And Wade provided us with sort of a  
15 high-level overview of the project. What I'd like  
16 you to do is provide the Commission with a more  
17 detailed overview of the project.  
18 A. Okay.  
19 Q. You'll do that?  
20 A. Yeah.  
21 Q. Okay. Let's start, how was the project  
22 area selected?  
23 A. So as Wade previously testified to, there  
24 are several factors with respect to the technical  
25 considerations related to the suitability of the

214

1 geology for determining the site location.  
2 Previous state and federal funded projects  
3 suggested that this region of North Dakota has  
4 suitable geology for CO<sub>2</sub> storage. Through this  
5 project, acquisition of site-specific data  
6 confirmed the viability of the subsurface geology  
7 for safe and permanent storage of CO<sub>2</sub>.  
8 Q. Can you explain for the Commission staff  
9 and opposing counsel why the Broom Creek Formation  
10 in this area is a good candidate for CO<sub>2</sub> storage?  
11 A. Yes. So the Broom Creek in this area has  
12 sufficient thickness and porosity and permeability  
13 for the injection and storage of large volumes of  
14 CO<sub>2</sub>. It's also at a depth at which CO<sub>2</sub> would stay  
15 in a super-critical state which is conducive for  
16 the efficient use of pore space.  
17 I'd also like to point to figure 2.9 on  
18 page 2-16. So this is a map of the extent of the  
19 Broom Creek Formation in North Dakota showing that  
20 the Broom Creek is laterally extensive across this  
21 project site. The Broom Creek is also overlain by  
22 an upper confining zone that is devoid of  
23 transmissive faults and fractures with sufficient  
24 vertical extent and permeability to serve as fluid  
25 migration pathways, and that upper confining zone

215

1 is laterally continuous over the storage facility  
2 areas.  
3 Q. Amanda, now I'd like you to discuss a bit  
4 the confining zones of the Broom Creek Formation.  
5 You explained for us why the Broom Creek Formation  
6 was selected from the standpoint of it being  
7 prevalent in the area. Can you now discuss for us  
8 the confining zones above and below the Broom  
9 Creek?  
10 A. Yes. So the upper confining zone is  
11 considered to be all of the formations from the top  
12 of the Spearfish Formation down to the top of the  
13 Broom Creek Formation. And so I'd like to point  
14 you guys to page 2-19. So we're showing on Figure  
15 2-11 a well log display, and I'd just like to point  
16 you to the upper confining zone which is labeled as  
17 the Opeche/Spearfish.  
18 So this is log data from the Milton  
19 Flemmer 1 well, and so at the Milton Flemmer 1 well  
20 the upper confining zone consists of the Spearfish,  
21 Minnekahta and the Opeche. The Minnekahta is  
22 typically used to differentiate between the  
23 Spearfish and the Opeche. At the Milton Flemmer  
24 well, the Minnekahta is approximately 23 feet  
25 thick, but the Minnekahta pinches out. And so

216

1 that's why we'll refer to the upper confining zone  
2 here as the Opeche/Spearfish because in most places  
3 for this specific storage facility area and the  
4 other two storage facility areas, the  
5 Opeche/Spearfish is undifferentiated due to the  
6 absence of the Minnekahta.  
7 Q. Now, what properties in the upper  
8 confining zone that you just discussed make it a  
9 good seal?  
10 A. So the upper confining zone has a low  
11 permeability and porosity. It also has a high  
12 relative permeability -- or sorry -- a high  
13 capillary entry pressure relative to the injection  
14 zone. It is devoid, as I mentioned, of faults and  
15 fractures with sufficient permeability and vertical  
16 extent to act as a fluid migration pathway. And  
17 it's laterally extensive across the storage  
18 facility areas.  
19 Q. And what data did you use to validate  
20 suitability of the storage complex for CO<sub>2</sub> injection  
21 and long-term storage?  
22 A. So I'm going to point you to the two maps  
23 on page 2-5 and 2-6, which is Figure 2-3 and Figure  
24 2-4. So these maps are showing the data used for  
25 our evaluation as well as the construction of the

217

1 geologic model. So this includes 2D and 3D seismic  
2 data. It includes site-specific well log, core,  
3 fluid sampling and formation testing data as well  
4 as regional logs, core, fluid samples and formation  
5 testing data.  
6 Q. And, Amanda, what are the mechanisms for  
7 geologic confinement?  
8 A. So initially as -- after the CO<sub>2</sub> is  
9 injected, it will be contained by the upper  
10 confining zone itself. So the CO<sub>2</sub> is a buoyant  
11 fluid and it will be contained under the effects of  
12 relative permeability.  
13 So laterally the CO<sub>2</sub> will be contained via  
14 residual gas trapping, and as CO<sub>2</sub> dissolves in the  
15 formation brine, it'll be confined through  
16 solubility trapping. As mentioned after the -- as  
17 the CO<sub>2</sub> dissolves, the brine it dissolves into will  
18 become more dense and that will eventually sink  
19 lower in the Broom Creek Formation. And over a  
20 much longer period of time, hundreds of years,  
21 mineralization will start to occur and that will  
22 also become a trapping mechanism.  
23 Q. Amanda, in your expert opinion, will  
24 geochemical interaction impact seal integrity or  
25 injectivity?

218

1 A. So, no, geochemical interactions of  
2 injected CO<sub>2</sub> with the upper confining zone will not  
3 impact the integrity of the confining zone. So we  
4 did an analysis using geochemical modeling. So the  
5 upper confining zones, as I mentioned, are low  
6 porosity and low permeability. We don't expect the  
7 CO<sub>2</sub> to have much interaction with the upper  
8 confining zone, but we wanted to look at an extreme  
9 case or a conservative case what would happen if  
10 the CO<sub>2</sub> did have interactions with the upper  
11 confining zone, would there be any adverse  
12 geochemical reactions that would impact the ability  
13 of the confining zone to contain the CO<sub>2</sub>.  
14 So what we did is we used a software  
15 called PHREEQC to do modeling of the upper  
16 confining zone. So the PHREEQC software doesn't --  
17 it uses a transport mechanism of dispersion to  
18 allow CO<sub>2</sub> to flow through the model cells. It  
19 doesn't use permeability to dictate flow in the  
20 model. And so this is a conservative case where  
21 we're able to expose the model cells to that CO<sub>2</sub>.  
22 So to populate the model, we used  
23 site-specific geochemical analysis of fluids, of  
24 mineralogy from the core data and CO<sub>2</sub> composition.  
25 So it should be noted for the CO<sub>2</sub> composition we

219

1 also took a conservative approach where we modeled  
 2 the CO<sub>2</sub> stream of 95 percent CO<sub>2</sub> and 2 percent  
 3 oxygen. So this is more oxygen -- higher oxygen  
 4 amount than is in the anticipated CO<sub>2</sub> stream, as  
 5 Wade testified to earlier. We chose to use this  
 6 composition for modeling as oxygen is known to be  
 7 more reactive, and so we wanted to look at an  
 8 extreme case.

9 And even in this extreme case where we're  
 10 ignoring permeability, we're allowing CO<sub>2</sub> to contact  
 11 the upper confining zone, we're using a CO<sub>2</sub>  
 12 composition with higher O<sub>2</sub>, the modeling  
 13 demonstrated that action with the CO<sub>2</sub> to the upper  
 14 confining zone would result in no adverse effects.  
 15 So there is little to no porosity change due to  
 16 precipitation or dissolution from the model.

17 Additionally -- sorry --

18 Q. No. You're fine.

19 A. Additionally, related to injection we also  
 20 did geochemical modeling of the injection reservoir  
 21 using CMG's GEM software where we simulated CO<sub>2</sub>  
 22 injection into the reservoir, again using that  
 23 95 percent CO<sub>2</sub> and 2 percent oxygen case, and we  
 24 saw, similarly, little to no effect on porosity due  
 25 to precipitation or dissolution of minerals due to

220

1 the interaction of the CO<sub>2</sub>, so we don't anticipate  
 2 geochemical reactions will impact injectivity  
 3 adversely.

4 Q. Okay. When the two previous witnesses  
 5 were up here testifying, there were some questions  
 6 about what sort of impact injection could have on  
 7 underground sources of drinking water. In your --  
 8 in your expert opinion, will there be any adverse  
 9 effects?

10 A. No. There will be no adverse effects on  
 11 underground sources of drinking water. As I  
 12 previously mentioned, the Broom Creek is overlain  
 13 by a competent confining zone that is devoid of  
 14 transmissive faults and fractures that could serve  
 15 as fluid migration pathways.

16 I'd also like to note that above that  
 17 primary confining zone there is approximately a  
 18 thousand feet of additional low permeability rock  
 19 that will contain the CO<sub>2</sub>. In addition to that  
 20 thousand feet, there is another 2,000-plus feet of  
 21 impermeable rock below the lowest USDW which we're  
 22 defining as the Fox Hills Formation.

23 Q. Now, you indicated that there was no  
 24 evidence of fluid migration pathways. How did you  
 25 determine an absence of fluid migration pathways?

221

1 A. So we looked at several data sets,  
 2 including 3D seismic data. We looked at formation  
 3 image logs in terms of fracture analysis. We also  
 4 did fracture analysis of the whole core that was  
 5 collected from the project. Additionally, we  
 6 looked at fluid samples to evaluate if the Broom  
 7 Creek Formation was hydraulically isolated from the  
 8 next porous and permeable zone, which is the Inyan  
 9 Kara Formation.

10 Q. Let's talk a little bit about seismicity.  
 11 In your expert opinion, is there a risk that  
 12 seismicity will interfere with the containment of  
 13 the CO<sub>2</sub>?

14 A. There is little risk that seismicity will  
 15 interfere with containment of CO<sub>2</sub>. So I'm referring  
 16 to both naturally and induced seismicity. So there  
 17 is a lack of historical earthquakes in North  
 18 Dakota. So we've looked at historical earthquake  
 19 data. Just one study in the permit that references  
 20 this, a study done by Anderson and others in 2016,  
 21 on page 2-69, Figure 2-44, shows -- the dots on  
 22 this map reflect the historical earthquakes from  
 23 the late 1800s to 2015, and there's fewer than 20  
 24 historical earthquakes during this time frame.  
 25 And so this can be attributed to the

222

1 general geologic stability of the formation. So in  
 2 addition to this stability of the -- the region,  
 3 we'll be operating the project under the fracture  
 4 pressure gradient of the Broom Creek Formation  
 5 which is also lower than the fracture pressure  
 6 gradient of the upper confining zone which reduces  
 7 risks of induced seismicity.

8 Q. Now, Commission staff had some questions  
 9 of the past two witnesses about commercially  
 10 valuable minerals. Do any of the three proposed  
 11 storage facilities contain commercially valuable  
 12 minerals?

13 A. Yes. So there is lignite coal reserves  
 14 within each storage facility.

15 Q. And are there any oil-bearing formations  
 16 or other hydrocarbon reserves located within the  
 17 boundaries of the storage facilities?

18 A. So the North Dakota Geological Survey  
 19 recognizes the Spearfish Formation as the only  
 20 hydrocarbon-bearing formation above the Broom Creek  
 21 Formation, and that is devoid of hydrocarbons in  
 22 the project area. We also found no evidence of  
 23 hydrocarbons in formations below the Broom Creek  
 24 Formation or within the Broom Creek Formation.  
 25 We evaluated this through review of legacy

223

1 wellbores, existing oil and gas exploration  
 2 studies, historical production data which are  
 3 discussed in the permit, as well as evaluation of  
 4 the mud logs for the three stratigraphic test  
 5 wells.  
 6 Q. What if hydrocarbons were ultimately  
 7 discovered within the storage facility area? Is  
 8 there some way to develop those hydrocarbons?  
 9 A. Yes. So engineering controls could be  
 10 used to produce hydrocarbons located below the  
 11 injected CO<sub>2</sub> at each storage facility area. These  
 12 may include, you know, increased mud weight to  
 13 account for increased pressure in the reservoir due  
 14 to injection. Also, you could potentially drill  
 15 horizontally underneath the plume to produce any  
 16 potential hydrocarbons that are discovered in the  
 17 future.  
 18 Q. And directional as well; is that correct?  
 19 A. Yes.  
 20 Q. Okay. I don't know if you covered this so  
 21 I'm going to go back to it just for a moment. I  
 22 think you indicated that there were some reclaimed  
 23 coal mines in the area. Are there any -- are there  
 24 any plans to mine any coal that's in the area?  
 25 A. So there's a map on page 2-77. It's

224

1 Figure 2-51. So 2-51 is showing the future and  
 2 reclaimed mining areas for the Coyote Creek and the  
 3 Beulah Mine, so those are the two mines closest to  
 4 the three storage facility areas. So within the  
 5 storage facility areas themselves, there is no --  
 6 currently there's no future mining plans from  
 7 either of these wells.  
 8 Additionally, operation of the storage  
 9 facility area wouldn't preclude future production  
 10 of the coal. And the areas where there's surface  
 11 facilities for this project, there are no active  
 12 coal leases that are known.  
 13 Q. And since the storage zone is quite a bit  
 14 deeper than the coal in this area, is it a  
 15 possibility of mining the coal even though you have  
 16 a storage facility in place?  
 17 A. Yes.  
 18 Q. Okay. Let's -- let's switch now to  
 19 Section 3 of the application. And can you briefly  
 20 provide an explanation of which permit requirements  
 21 are addressed in Section 3?  
 22 A. Yes. So Section 3 provides an overview of  
 23 the geologic modeling and dynamic reservoir  
 24 simulation activities that were conducted to define  
 25 the vertical and lateral extents and migration of

225

1 injected CO<sub>2</sub> as well as the associated pressure  
 2 front, the stabilized CO<sub>2</sub> plume and the area of  
 3 review.  
 4 Q. And can you talk a little bit about the  
 5 geologic modeling activities that were conducted  
 6 with respect to these three applications?  
 7 A. So geologic modeling was conducted using  
 8 industry standard methods and Petrel software. So  
 9 this included the evaluation of geologic data, the  
 10 construction of a structural framework and  
 11 distribution of rock and petrophysical properties.  
 12 Q. How was the geologic model utilized to  
 13 address the permit requirements?  
 14 A. The geologic model served as inputs for  
 15 the dynamic reservoir simulations. So the dynamic  
 16 reservoir simulations were done using industry  
 17 standard methods and CMG software.  
 18 As mentioned, the dynamic reservoir  
 19 simulations were conducted to determine the lateral  
 20 and vertical extents of the injected CO<sub>2</sub> to define  
 21 the project boundaries.  
 22 Q. And how was the area of review delineated?  
 23 A. The area of review was delineated using a  
 24 risk-based approach developed by the EERC and  
 25 published in Matt Burton-Kelly 2021.

226

1 Q. Amanda, before I get to the statutory  
 2 questions, there were some questions about  
 3 previously filed information that ultimately  
 4 resulted in what I'm going to call the final form  
 5 of the application. Can you just enlighten us as  
 6 to when you started working on this project, when  
 7 you started filing things with the Commission and  
 8 give us a little bit of an idea of what you filed?  
 9 A. Previously or --  
 10 Q. Yeah.  
 11 A. -- the final form?  
 12 Q. Yeah.  
 13 A. So EERC was -- submitted a contract to  
 14 Summit, I believe Wade mentioned, in early 2020.  
 15 We began work on collecting the site-specific data.  
 16 We helped prepare permit applications and we  
 17 submitted draft permit applications to the DMR, I  
 18 believe, late spring, early summer of 2023.  
 19 Q. And there was some discussion about some  
 20 of the data that was submitted and the modeling  
 21 that was done. Could you describe just a little  
 22 bit of that and what was submitted to the  
 23 Commission in terms of the data and providing the  
 24 Commission an opportunity to review that data and  
 25 do simulations?

227

1     **A.** Yep. So as requested by the DMR, we  
 2 supplied all the shapefiles associated with the  
 3 project. We also provided the geologic model in  
 4 the form of the output that was used for dynamic  
 5 reservoir simulations.  
 6     **Q.** And is it your understanding that all that  
 7 information that was submitted to the Commission  
 8 was available to the public?  
 9     **A.** Yes. And in addition to that, the -- the  
 10 majority of the input data for the model is  
 11 publicly available. A lot of the data -- or  
 12 majority of the data used in the geologic model can  
 13 be found on the NDIC's website which included, you  
 14 know, core data, well logs, fluid sample analysis,  
 15 as well as formation tests.  
 16     **Q.** Okay. Now, the statutory questions. In  
 17 your opinion, Amanda, is the storage facility  
 18 suitable and feasible for carbon dioxide injection  
 19 and storage?  
 20     **A.** Yes. As I previously mentioned, the Broom  
 21 Creek Formation has characteristics that are  
 22 conducive for geologic storage of CO<sub>2</sub>, including  
 23 being overlain by a competent confining zone.  
 24     **Q.** And in your opinion is the carbon dioxide  
 25 to be stored of a quality that allows it to be

228

1 safely and efficiently stored in the storage  
 2 reservoir?  
 3     **A.** Yes. So we conducted geochemical modeling  
 4 that demonstrated that the anticipated CO<sub>2</sub> stream  
 5 will not have adverse geochemical interactions on  
 6 the upper confining zone.  
 7     **Q.** And, in your opinion, will substances that  
 8 compromise the integrity of the storage reservoir,  
 9 will they not enter the storage reservoir?  
 10     **A.** Yes. So the anticipated CO<sub>2</sub> stream to be  
 11 used for the project is not anticipated to have  
 12 adverse impact due to geochemical interactions.  
 13     **Q.** Okay. And to get a conclusion from you  
 14 with respect to some of the things you discussed  
 15 having to do with minerals in the area, do the  
 16 storage facilities contain commercially valuable  
 17 minerals?  
 18     **A.** Yes. As previously mentioned, all three  
 19 storage facilities contain lignite coal reserves.  
 20     **Q.** And as you testified previously, that  
 21 doesn't prohibit that this storage facility or  
 22 these storage facilities won't prohibit the mining  
 23 of those -- of that coal if it's economically  
 24 possible to do so; is that correct?  
 25     **A.** Yes. That's correct.

229

1     **Q.** Okay. In your opinion, will issuance of a  
 2 storage facility permit adversely affect mineral  
 3 owners or mineral lessees?  
 4     **A.** No. As previously stated, if there's  
 5 hydrocarbon reserves discovered in the future,  
 6 there is engineering controls and other methods for  
 7 the extraction of those minerals.  
 8     **Q.** And, in your opinion, can the proposed  
 9 storage facility be operated in a manner that will  
 10 not adversely affect surface waters or formations  
 11 containing fresh water?  
 12     **A.** Yes. So as mentioned, the storage  
 13 formation is overlain by a competent upper  
 14 confining zone that's devoid of transmissive faults  
 15 and fractures with sufficient permeability and  
 16 vertical extent that could act as a fluid migration  
 17 pathway.  
 18     **Q.** And you touched on this in your testimony,  
 19 but just a question to confirm. In your opinion,  
 20 can the proposed storage facility be operated so  
 21 that carbon dioxide will not escape from the  
 22 storage reservoir?  
 23     **A.** Yes. As mentioned, it's -- the storage  
 24 reservoir is overlain by a competent upper  
 25 confining zone that is devoid of -- sorry -- devoid

230

1 of potential fluid migration pathways.  
 2     **Q.** And based on your study and review of the  
 3 testimony and exhibits that you've testified here  
 4 today and your knowledge of the project as a whole,  
 5 in your expert opinion are the horizontal and  
 6 vertical boundaries of the storage reservoir  
 7 adequately defined and include buffer areas to  
 8 ensure that the storage facility is operated  
 9 safely?  
 10     **A.** Yes. So geologic modeling and dynamic  
 11 reservoir simulations were used to define the  
 12 vertical and horizontal boundaries of the storage  
 13 facility area, and the storage facility area  
 14 includes an appropriate buffer.  
 15             **MR. BENDER:** That's all the questions I  
 16 have for this witness. We'd like to move to  
 17 Caitlin Olsen, if we may.  
 18             **HEARING EXAMINER GARNER:** Ms. Olsen,  
 19 please raise your right hand.  
 20                     **CAITLIN OLSEN,**  
 21 being first duly sworn, was examined and testified  
 22 as follows:  
 23                     **DIRECT EXAMINATION**  
 24     **BY MR. BENDER:**  
 25     **Q.** Caitlin, can you state your full name for

231

1 the record, please?

2 **A.** Caitlin Olsen.

3 **Q.** And, Caitlin, by whom are you employed?

4 **A.** The Energy & Environmental Research

5 Center.

6 **Q.** In what capacity?

7 **A.** I am a principal policy and regulatory

8 strategist.

9 **Q.** And like Amanda did, what I'd like you to

10 do is briefly highlight for us your educational

11 background and work experience.

12 **A.** I graduated with a bachelor's of science

13 degree in geology with an emphasis in hydrogeology

14 from the University of Wisconsin, River Falls. I

15 started work for the Department of Mineral

16 Resources where I started as a petroleum engineer

17 field inspector. I ended here with the Department

18 of Mineral Resources as a production supervisor.

19 In 2022 -- I held those positions for

20 eight years, and in 2022 I started working for the

21 EERC where I -- my position was a senior regulatory

22 and permitting specialist. My position today with

23 the EERC is a principal policy and regulatory

24 strategist.

25 **Q.** Caitlin, what I'd like you now to discuss

232

1 for us is what some of your duties and

2 responsibility are with respect to your employment

3 with the EERC generally and specifically with

4 respect to the projects that are before the

5 Commission today.

6 **A.** Sure. So generally I oversee commercial

7 CO<sub>2</sub> storage projects and development of their

8 permits. I also work in oil and gas regulations

9 and provide policy advisement there. Specific to

10 this storage facility permit, I oversaw the

11 creation of the storage facility permit and

12 compliance with regulations.

13 **Q.** Okay. So Amanda spent some time

14 discussing Sections 2 and 3 in the application.

15 Let me direct your attention to Section 4 of the

16 applications. Can you briefly explain how the AOR

17 was used to evaluate the region and to meet

18 specific permit requirements?

19 **A.** Sure. The area of review, as you'll see

20 on page 4-1, is defined as the region surrounding

21 the geologic storage project where underground

22 sources of drinking water may be endangered. The

23 AOR in this case contains the storage facility area

24 boundary, and that is based on the simulation

25 extent of the stabilized plume. It includes a

233

1 one-mile buffer outside of the storage facility

2 area to encompass the entire area of review.

3 **Q.** So can you direct your attention to the

4 map in the application that depicts the AOR. And

5 give everyone a little time to get there.

6 **A.** If you'll look at Figure 4-3, that map

7 shows the area of review on the outside in purple.

8 In farther is the storage facility area denoted as

9 a black line. And in even farther is the

10 stabilized CO<sub>2</sub> plume extent. Within this map,

11 you'll see groundwater wells and one spring.

12 You'll see the stratigraphic reservoir monitoring

13 well, the Milton Flemmer 1. You'll see the two

14 proposed injection wells. And if there were legacy

15 oil and gas wells present, they would be shown

16 here, but there are no legacy oil and gas wells

17 present in this particular permit.

18 **Q.** So, Caitlin, after you identified the AOR,

19 what type of evaluation was conducted by you and

20 other staff members of EERC?

21 **A.** A review of data of public record was

22 performed where -- for all wells within the storage

23 facility area and the AOR itself, and included in

24 that review was any wells that penetrate the

25 overlying seal, the Opeche/Spearfish Formation and

234

1 any other wells that might exist in the area of

2 review.

3 **Q.** So the first step of evaluating the AOR is

4 you look for any wells that are drilled in the

5 area; is that correct?

6 **A.** That's correct.

7 **Q.** Okay. And did you identify any wells?

8 **A.** We did. There's one particular well

9 that -- only one well in this area of review that

10 penetrates the upper confining seal, the

11 Opeche/Spearfish Formation, and that well is

12 described as the Milton Flemmer 1, which was

13 drilled specifically for this project as a

14 stratigraphic test well and as the monitoring well.

15 Figure 4-4 further explains the Milton

16 Flemmer 1 and how it's constructed. So the Milton

17 Flemmer 1, during this review process by a

18 geologist and an engineer, was found to be properly

19 isolated which prevents the migration of any fluids

20 into USDWs, and a determination was made that no

21 corrective action is needed for this well.

22 **Q.** Now, Caitlin, it's -- it's my

23 understanding that a reevaluation of the AOR and

24 corrective action plan period is proposed not to

25 exceed five years. In your opinion, what would

235

1 trigger reevaluation prior to the five years and  
 2 what sort of reevaluation would that address?  
 3 **A.** Yeah. So Summit will comply with North  
 4 Dakota rules which is to reevaluate the storage  
 5 facility area every five years. Any triggers prior  
 6 to that five years where Summit would be required  
 7 to reevaluate the area of review and storage  
 8 facility area would be if monitoring operational  
 9 data requires it or if there's a significant enough  
 10 change found in the area of review that would  
 11 warrant it.  
 12 **Q.** If there were significant changes, what  
 13 would happen next, in your opinion?  
 14 **A.** Summit would update the model using  
 15 history match data or the site-specific data that  
 16 they found through injection activities. And then  
 17 based on that updated model would work with the DMR  
 18 to perform any corrective action if required or if  
 19 needed.  
 20 **Q.** Now, in addition to the matters that were  
 21 discussed by Amanda with respect to confining  
 22 zones, what other information and data was used to  
 23 assess protection of underground sources of  
 24 drinking water within the AOR?  
 25 **A.** So aside from looking at the DMR database

236

1 for the Milton Flemmer 1 well and using Summit's  
 2 own records -- alongside using Summit's records and  
 3 DMR records for the Milton Flemmer 1 stratigraphic  
 4 test well, other data sources were used. Those  
 5 data sources to review these wells within the area  
 6 of review include the USGS database, the U.S.  
 7 Geological Survey database, the Public Service  
 8 Commission and the Department of Water Resources.  
 9 **Q.** And did you examine freshwater zones?  
 10 **A.** We did.  
 11 **Q.** Can you explain to us what the lowest  
 12 freshwater zone was that you examined?  
 13 **A.** So described on page 4-12, the lowest USDW  
 14 in the AOR is the Fox Hills Formation, and together  
 15 that comprises -- includes the Hell Creek Formation  
 16 to comprise the confined aquifer system that  
 17 includes both. The Fox Hills Formation in the AOR  
 18 is about 1500 feet deep here and about 250 to  
 19 300 feet thick.  
 20 **Q.** Are there any Fox Hills wells in the AOR?  
 21 **A.** There is one Fox Hills well existing in  
 22 the area of review. That's included in a map on  
 23 the next page -- nope -- on Figure 4-10 on  
 24 page 4-17. That well is included to be in the  
 25 testing and monitoring plan during the life of the

237

1 Summit project and is included in the baseline  
 2 testing and monitoring plan.  
 3 **Q.** So other than the Fox Hills, did you look  
 4 at any other freshwater zones?  
 5 **A.** Yes. So Summit worked with landowners in  
 6 the area to identify any other potential freshwater  
 7 zones above the Fox Hills where testing could be  
 8 performed. They ground-truthed the area based on  
 9 the groundwater well maps that you'll see in Figure  
 10 4-3, and during those ground-truthing efforts and  
 11 based on depth of wells, a final determination of  
 12 the baseline testing and monitoring plan with  
 13 respect to groundwater monitoring and the life of  
 14 the injection project groundwater monitoring plan  
 15 was determined, and the final wells to be included  
 16 is shown on Figure 4-10.  
 17 **Q.** So other than what you've discussed so  
 18 far, what additional protections are in place or  
 19 will be in place for underground sources of  
 20 drinking water?  
 21 **A.** There are multiple impermeable layers  
 22 throughout the -- this area. So as Amanda  
 23 testified to, directly above the Broom Creek is the  
 24 Opeche/Spearfish Formation, and then directly below  
 25 the Fox Hill Formation is the Pierre Shale which is

238

1 an impermeable shale that provides the -- the  
 2 protection directly beneath the Fox Hills, and in  
 3 between those two impermeable layers are multiple  
 4 confining layers that provide protection to USDWs.  
 5 **Q.** Caitlin, in your expert opinion, can the  
 6 storage facility be operated so that it will not  
 7 endanger human health nor unduly endanger the  
 8 environment?  
 9 **A.** Yes. Engineering safeguards are in place,  
 10 and the site consists of ideal geologic confinement  
 11 and geologic mechanisms that will protect human  
 12 health and the environment from any CO<sub>2</sub> injection  
 13 activity.  
 14 **MR. BENDER:** No further questions of  
 15 Ms. Olsen.  
 16 **HEARING EXAMINER GARNER:** Mr. Braaten.  
 17 **MR. BRAATEN:** Thank you, Your Honor.  
 18 **CROSS-EXAMINATION**  
 19 **BY MR. BRAATEN:**  
 20 **Q.** Is there a lower porosity in the lower  
 21 confining zone than the upper confining zone?  
 22 **A.** (BY MS. DOUGLAS) So Table 2-7b on  
 23 page 2-32 contains ranges for permeability as well  
 24 as averages from core analysis as well as the  
 25 simulation model. With respect to the -- the

239

1 Amsden Formation, typically the Opeche/Spearfish,  
 2 which is the upper confining zone, has lower  
 3 permeability than the Amsden Formation, which is  
 4 the lower confining zone.  
 5 Q. You discussed the Fox Hills freshwater  
 6 aquifer. Is that the only freshwater aquifer that  
 7 you studied with respect to the application?  
 8 A. No. As Caitlin mentioned, we identified  
 9 several other freshwater aquifers in the project  
 10 area. Additionally, I'll point you to Appendix B  
 11 which includes some of the fluid sample analyses.  
 12 So one of the other horizon samples listed on page  
 13 B-1 includes the Tongue River.  
 14 Q. Do you have a depth for where that sample  
 15 came from?  
 16 A. I don't have one in front of me at this  
 17 time.  
 18 Q. Is -- do you know whether the Mission  
 19 Canyon or Lodgepole or anything in the Minnelusa  
 20 Group contains a freshwater aquifer within North  
 21 Dakota, as defined by the Safe Drinking Water Act?  
 22 A. (BY MS. OLSEN) Are you asking if those  
 23 are USDWs?  
 24 Q. Correct.  
 25 A. The lowermost USDW is the Fox Hills

240

1 Formation, so nothing below that would be  
 2 considered a USDW.  
 3 Q. Based on the criteria in the Safe Drinking  
 4 Water Act or just classification?  
 5 A. Yeah, based on -- I mean, specific -- what  
 6 specifically in the Safe Water Drinking Act are you  
 7 referring to?  
 8 Q. Does it -- does -- are these freshwater  
 9 aquifers pursuant to the criteria for a U.S.  
 10 drinking water in the Safe Drinking Water Act?  
 11 A. (BY MS. DOUGLAS) I can't speak to the  
 12 entirety of the Williston Basin or North Dakota,  
 13 but within the storage facility area, I do not  
 14 believe that they are below 10,000 parts per  
 15 million.  
 16 Q. How does the permeability of the Spearfish  
 17 or the other impermeable zones compare to the  
 18 Bakken or the Three Forks?  
 19 A. I don't have data from those formations on  
 20 hand.  
 21 Q. Do you know how it compares generally,  
 22 though?  
 23 MR. BENDER: Objection. Relevance.  
 24 HEARING EXAMINER GARNER: Overruled.  
 25 MS. DOUGLAS: I'd say it's comparable.

241

1 Q. (MR. BRAATEN CONTINUING) Did you take any  
 2 water samples from any areas within the Minnelusa  
 3 Group or the Madison Group?  
 4 A. We did not. I'm basing that answer on  
 5 regional salinity maps.  
 6 Q. And based on regional salinity maps,  
 7 those -- you're saying the total dissolved solids  
 8 for those are above the thresholds in the Safe  
 9 Drinking Water Act or below?  
 10 A. Above. So they're above 10,000 parts per  
 11 million.  
 12 Q. Do you know what they are?  
 13 A. I don't have those maps on hand, no.  
 14 Q. Do you know if they're between 10 and 15  
 15 thousand?  
 16 A. I don't know that.  
 17 Q. Where would that information be contained?  
 18 A. Several of those maps can be found  
 19 publicly available. I believe the North Dakota  
 20 Geological Survey has published some of those  
 21 online.  
 22 Q. Do you know whether -- well, do you know  
 23 for certain whether the total dissolved solids in  
 24 any of those -- in any of the water in those  
 25 formations -- let me start over.

242

1 With respect to any waters in the  
 2 Minnelusa Group or the Madison Group, do you know  
 3 sitting here today that they are below 10,000 total  
 4 dissolved solids?  
 5 A. I do not know that. We did not sample  
 6 that as part of this data characterization plan  
 7 regarding potential leakage pathways from the  
 8 storage reservoir into those zones. The Amsden is  
 9 also devoid of transmissive faults and fractures  
 10 that have sufficient vertical extent of  
 11 permeability for CO<sub>2</sub> to leak from the Amsden into  
 12 lower formations.  
 13 Q. Would you make any suggestions on  
 14 alternative ways to conduct operations here if you  
 15 discovered that there was a U.S. drinking water and  
 16 a freshwater aquifer under the Safe Drinking Water  
 17 Act in the Minnelusa or Madison Group?  
 18 A. So for the operation we'd potentially want  
 19 to add additional monitoring of those zones as  
 20 well, but I don't believe the injection operations  
 21 as a -- in my opinion, I would not recommend any  
 22 changes to injection operations besides additional  
 23 monitoring.  
 24 Q. And when you say you wouldn't recommend  
 25 any changes to injection operations, are you

243

1 referring primarily to the injection pressures and

2 the max pressure of injection?

3 **A.** Correct. And targeting the Broom Creek

4 itself for injection.

5 Could you clarify your earlier question?

6 You talked about the Madison Group. Did you also

7 mention the Minnelusa Group?

8 **Q.** I did.

9 **A.** So the Broom Creek itself is within the

10 Minnelusa Group, and so we've sampled that and it

11 is over 10,000 parts per million.

12 **Q.** And that sample was from above the Amsden

13 Formation?

14 **A.** Correct.

15 **Q.** So as part of developing this application,

16 you ran a model in the Petrel software?

17 **A.** I personally did not, but the EERC team

18 did, yes.

19 **Q.** Okay. And ran a model in the GEM

20 software?

21 **A.** So I'd say we constructed the model in the

22 Petrel software and then we used it to run dynamic

23 reservoir simulations in CMG.

24 **Q.** And you also used the PHREEQC model for

25 the geochemical interaction modeling?

244

1 **A.** That's correct.

2 **Q.** And did you submit the data decks for each

3 of those three models to the oil and gas division?

4 **A.** So all of the data that was used is either

5 described in the permit, was provided to the DMR,

6 or is publicly available outside of the seismic

7 data.

8 **Q.** Did you say that all of the data provided

9 to the DMR is what is in the permit application?

10 No. I misheard that.

11 Did you, EERC, provide the data decks for

12 those three models to the oil and gas division?

13 **A.** Can you define "data decks"?

14 **Q.** What do you understand a data deck to be?

15 **A.** So the -- the raw data we use is publicly

16 available. Any assumptions used have been detailed

17 in the permit. It -- for example, geochemical

18 modeling, we list the mineralogy from the specific

19 sample that was used. We listed the CO<sub>2</sub>

20 composition. We listed the -- some of the

21 additional other input data, including -- just one

22 second -- including parameters such as exposure

23 level and things like that.

24 So we believe that in the case of

25 geochemical modeling, they would have all the

245

1 information they would need to evaluate or

2 replicate the modeling.

3 **Q.** You say they would have the data they need

4 to replicate the modeling. Who's "they"?

5 **A.** The DMR. In the case of the geochemical

6 modeling, all the information is publicly

7 available, so anyone could potentially replicate

8 these results.

9 **Q.** Is your education and professional

10 background in geology or engineering or both?

11 **A.** So I have a master's in geology with an

12 emphasis in geophysics, and I have a bachelor's in

13 physics.

14 **Q.** Okay. Do you ever talk to coworkers and

15 other colleagues about the models that we just

16 discussed?

17 **A.** That's correct. So as I mentioned

18 earlier, I actually oversee the EERC's geologic

19 modeling team.

20 **Q.** And have you ever heard someone at EERC

21 use the phrase "data deck"?

22 **A.** No, we don't use that term.

23 **Q.** Have you ever heard anyone doing petroleum

24 reservoir engineering use the term "data deck"?

25 **A.** The term's familiar.

246

1 **Q.** Do you know what a data deck is?

2 **A.** I think the definition's subjective.

3 **Q.** Is the well testing data that you used to

4 tune and develop the permeability model publicly

5 available?

6 **A.** The well testing data from the Milton

7 Flemmer 1 well is publicly available on the NDIC

8 website, yes.

9 **Q.** The .DAT file?

10 **A.** I'm uncertain of the format that's online.

11 **Q.** What would you do with a PDF file with

12 that information? It's not really usable; right?

13 **A.** Depending if it's in tabular or table

14 format or if it's graphical.

15 HEARING EXAMINER GARNER: You know, now's

16 a good time to take our last ten-minute break and

17 then we'll come back and finish up.

18 (Recessed at 5:11 p.m. and reconvened at

19 5:23 p.m.)

20 HEARING EXAMINER GARNER: We are back on

21 the record. Mr. Braaten, you were questioning

22 Summit's witnesses.

23 MR. BRAATEN: Thank you, Your Honor.

24 **Q.** (MR. BRAATEN CONTINUING) You said that

25 the data to run the geologic model is publicly

247

1 available; right?

2 **A.** (BY MS. DOUGLAS) Everything except the 3D

3 seismic and interpretative volumes from the 3D

4 seismic.

5 **Q.** Can you do it without the 3D seismic?

6 **A.** Can we replicate the exact model?

7 **Q.** Yeah.

8 **A.** No. Actually let me correct that. So

9 based on what's in the permit, yes, because with

10 the 3D seismic, we used the seismic to interpret

11 variograms, and the variograms links interpreted

12 from the seismic were listed here. The -- the one

13 thing you might not be able to replicate is that we

14 used interpreted seismic horizons from the seismic

15 data for the structural model. So that would be

16 not duplicatable without the 3D seismic.

17 **Q.** If you were asked to analyze the models

18 that you created here, as a third party and given

19 the data you're saying is publicly available but

20 knowing nothing about the project going in, how

21 long would it take you by yourself to replicate

22 these models by going through all of the publicly

23 available data and reconstructing it, collating it,

24 organizing it, choosing it, picking your tops? How

25 long would it take you to recreate that model?

248

1 **A.** Typically our modeling workflow for a

2 model of this size and scale with this amount of

3 data would be approximately six to eight weeks to

4 go through that process. Keeping in mind with the

5 formation tops, there are publicly available

6 formation tops out there. It's a matter of QC'ing

7 them.

8 **Q.** Is that what you did?

9 **A.** Yes.

10 **Q.** But you chose the formation tops used in

11 your model; right?

12 **A.** So we went through the publicly available

13 ones and quality controlled them.

14 **Q.** How did you do that?

15 **A.** So our method is based on core analysis.

16 So we also looked at core analysis to determine

17 where we thought the top of the Broom Creek was,

18 and so we've reported in the permit how we picked

19 the top of the Broom Creek. So if someone wanted

20 to pick how we picked it, we report where we pick

21 it on gamma ray log signatures. That's -- that's

22 in the permit. And so we evaluate whether the

23 publicly available picks match that specific

24 signature in the logs to determine if we're going

25 to use that top or adjust it.

249

1 **Q.** Without the impedance data, you could not

2 recreate the model to the same degree of accuracy

3 as you did; right?

4 **A.** The models would be different.

5 **Q.** And you said if you had to start from

6 scratch knowing nothing, you think you could get it

7 done in -- was it six to eight weeks?

8 **A.** Six to eight weeks with the -- with what's

9 published in the permit and the publicly available

10 data. I think what's published in the permit

11 provides a lot of time savings.

12 **Q.** And is that time estimate for you and your

13 team to do that?

14 **A.** If we were to replicate this with all the

15 things in the permit, it would be significantly

16 quicker.

17 **Q.** Meaning it would be quicker if you had

18 your whole team doing it?

19 **A.** No. Quicker if we're replicating using

20 assumptions, using the variogram links that we

21 report and stuff like that because we're not

22 interpreting the data to come up with new variogram

23 links. So if we wanted to replicate the model

24 using the -- the permit -- what's in the permit and

25 the publicly available data, it -- it'd be

250

1 considerably faster than six to eight weeks.

2 **Q.** And, again, is that for you and your team

3 to do that?

4 **A.** That would be for one or two individuals,

5 correct.

6 **Q.** Working full-time?

7 **A.** Yes.

8 **Q.** All day, every day?

9 **A.** Eight hours a day.

10 **Q.** If we didn't have the impedance data, how

11 would the model be different?

12 **A.** So as I mentioned, the main difference

13 would be the structural surfaces. So your

14 structural surfaces would be confined with your

15 well control, so there would be slight variations

16 on the structure of the formations. Petrophysical

17 property distribution might be slightly different

18 as well.

19 **Q.** Different meaning less accurate?

20 **A.** Is -- is your -- so --

21 **Q.** It results in a less predictive model?

22 **MR. BENDER:** Which question do you want

23 her to answer, Derrick?

24 **MR. BRAATEN:** Well, I was clarifying my

25 prior one.

251

1 MR. BENDER: Okay.

2 MS. DOUGLAS: So I'd say the models are

3 different. I think it's subjective how you define

4 model accuracy.

5 Q. (MR. BRAATEN CONTINUING) But if we define

6 it as how predictive it is, it would be less

7 predictive if we didn't have the impedance data?

8 A. It would have potentially less detail in

9 it.

10 Q. Are you familiar with the PHREEQCi input

11 files?

12 A. Generally.

13 Q. Did you create one for the PHREEQC model

14 you ran here?

15 A. Yes, an input file was generated.

16 Q. And did you give that to the oil and gas

17 division?

18 A. No.

19 Q. Why not?

20 A. The DMR staff did not request it directly.

21 Q. Did you submit that to the EPA's portal?

22 A. What EPA portal are you referring to?

23 The --

24 Q. Did you file it with the EPA?

25 A. No.

252

1 Q. Did you have some kind of an input file

2 that was created for the other two models?

3 A. The other two models being the geochemical

4 model for GEM and the geologic model?

5 Q. Correct.

6 A. Those models use multiple sources of input

7 data, so it's not a specific input file.

8 Q. It's a data deck?

9 A. You could confine it as a data deck.

10 Q. Do you have a data package that contains

11 all of the input files in one zip file or something

12 similar that can then be used as a load file with

13 the software programs?

14 A. Yes. The Petrel project itself can be

15 saved as a file. One thing to note about that,

16 while all the data is publicly available, that

17 Petrel file, as it is now, does contain some

18 digitized well logs that were purchased from a data

19 broker and are deemed confidential under a license

20 agreement. So that would have to be -- those

21 specific digitized logs would have to be stripped

22 from that Petrel project.

23 Q. Or simply paid for by someone else to get

24 a license? Why do you say they would have to be

25 stripped? For what purpose would you strip them

253

1 from the package?

2 A. They're governed by a specific license

3 agreement, so I don't have those terms available

4 now. But there are potential ways that someone

5 else could purchase those digitized logs for those

6 specific wells.

7 Q. And if they had a license, you could give

8 your copy to them?

9 A. Again, I'm not sure the specific license

10 terms for the logs in question.

11 Q. Are you aware of the GEM model having a

12 single file called -- with a file extension .DAT

13 that you can use to run a model on the program?

14 A. Correct.

15 Q. Do you have one of those .DAT files that

16 would allow us to run the model you ran in that

17 program?

18 A. For the CO<sub>2</sub> simulations or the geochemical

19 simulations?

20 Q. CO<sub>2</sub> simulation.

21 A. Yes, I believe that was provided to the

22 Commission already.

23 Q. And that could just be taken and loaded

24 into the GEM program to run the model that you ran?

25 A. That's my understanding, yes.

254

1 Q. Any idea why Summit won't provide that to

2 the intervenors?

3 A. I believe it was already provided to the

4 DMR so it's publicly available.

5 Q. Any idea why the DMR would refuse to

6 provide that to the intervenors?

7 A. I can't speak to that.

8 Q. Did EERC in your -- to your knowledge tell

9 the DMR not to provide those files to the

10 intervenors?

11 A. Not the specific files we provided to DMR,

12 no.

13 Q. Did the EERC tell the DMR not to provide

14 anything to the intervenors?

15 A. No.

16 Q. Okay. Did the EERC tell the DMR not to

17 disclose any information that it was providing to

18 the DMR?

19 A. No.

20 Q. And there is a .DAT file that can be used

21 to run that GEM model for the CO<sub>2</sub> dispersion that

22 was provided to the DMR? That's your testimony?

23 A. That is my understanding, yes.

24 Q. I'm going to have you turn to Exhibit 1A,

25 which was a copy of the application we were using.

255

1 **A.** What page?

2 **Q.** Can I have you turn to page 3-15?

3 **A.** I'm there.

4 **Q.** Can I have you just review the first full

5 paragraph I think that starts, "The simulation

6 model permeability."

7 **A.** I've reviewed it.

8 **Q.** Can you explain what you did when you say

9 that the simulation model permeability was tuned

10 globally by applying a permeability multiplier to

11 match the reservoir properties estimated from the

12 well-testing data on the Milton Flemmer?

13 **A.** Yep. So the injection test from the

14 Milton Flemmer 1 well resulted in an estimation of

15 permeability for the Broom Creek Formation, so that

16 permeability was significantly higher than the

17 permeability determined through well log

18 interpretation core analysis. So based on those

19 results, a 2.5 X multiplier was applied to the

20 permeability of the model globally.

21 **Q.** And is 2.5 essentially the delta between

22 what you had in your model and what you saw in the

23 Milton Flemmer, or does that represent the delta?

24 **A.** Yes. I believe the injection well data

25 suggested slightly higher. We thought 2.5 was

256

1 reasonable.

2 **Q.** Does that affect your ultimate injection

3 pressure limit?

4 **A.** Permeability is a factor that could impact

5 predicted pressure. Yes.

6 **Q.** Would you describe the permeability in

7 these storage facilities in the Broom Creek as

8 heterogenous or homogenous?

9 **MS. DOUGLAS:** Could you repeat the

10 question?

11 **(Record read as requested.)**

12 **MS. DOUGLAS:** They're heterogenous.

13 **Q.** **(MR. BRAATEN CONTINUING)** Did you consider

14 looking for a heterogenous cause rather than

15 applying a multiplier across the entire reservoir?

16 **A.** So the model already represented

17 heterogenous distribution of permeability as

18 distributed by the well log controls, the -- from

19 seismic data as well as the variograms used to

20 distribute properties, so applying the 2.5

21 multiplier would increase -- or it would increase

22 the -- the permeability for the full range of

23 permeabilities.

24 **And so a single multiplier was applied as**

25 **we felt, you know, the -- that test covers a large**

257

1 area as determined by the radius of investigation.

2 And so the response of the reservoir to determine

3 permeability we felt is representative of the

4 response that we're going to encounter during

5 operations.

6 **Q.** But even taking all that, it's possible

7 that what you saw there was simply the result of

8 heterogenous permeability and it didn't require an

9 adjustment to the model at all; right?

10 **A.** That's a possibility. There have also

11 been previous studies that have published results

12 from injection tests that have also seen similarly

13 higher permeability as determined by injection

14 tests. So in our technical opinion and experience

15 with the Broom Creek Formation, we felt 2.5 was

16 adequate to apply.

17 **Q.** Those other studies that did the injection

18 tests, were those done in oil fields?

19 **A.** No. The other study I'm referring to is

20 the injection test published in the Tundra SGS

21 storage facility permits.

22 **Q.** Did you try running the adjustment on

23 models for each of the facilities individually

24 versus across the entire reservoir?

25 **A.** No. The way we set up the model, we

258

1 didn't have an indicator that would allow us to

2 multiply permeabilities for individual regions.

3 **Q.** The simulation model permeability that you

4 had to begin with, was that based on the core logs?

5 **A.** It was based on evaluation of several well

6 logs, site-specific core analysis, as well as

7 regional core data. It was also informed from rock

8 properties derived from inversion of the 3D seismic

9 data.

10 **Q.** And you changed all that based on one

11 injection well test?

12 **A.** Yes.

13 **Q.** Can I have you go to page 3-7 and Figure

14 3-4?

15 **A.** I'm there.

16 **Q.** Can you describe what we're looking at in

17 this Figure 3-4?

18 **A.** So this is an aerial view for one layer of

19 the simulation model showing the permeability

20 within the Broom Creek.

21 **Q.** And can you explain the units being used

22 in the legend with the various colors on the right

23 and the numbers indicating which color is which

24 number?

25 **A.** Yeah. So permeability is being displayed

259

1 here in millidarcies.

2 Q. Are these pre or post application of

3 multiplier?

4 A. Post application.

5 Q. I'm sorry. You said post application?

6 A. Mm-hmm. Yep. So the 2.5 permeability

7 multiplier is already applied, and then it's hard

8 to view at this scale but -- so the top there we're

9 looking at is 5,000 millidarcies. That's a decimal

10 place.

11 Q. Does that map look like a reasonable range

12 in distribution of millidarcies?

13 A. Yes. So one thing that should be noted

14 about the Broom Creek and one thing that supports

15 the use of applying a permeability multiplier is

16 the fact that the Broom Creek contains several

17 unconsolidated sands, so these are poorly cemented

18 sands with extremely high porosity and

19 permeability. Because of the unconsolidated nature

20 of the sands, we're unable to perform core analysis

21 in them.

22 And so the geologic model that's based on

23 the well log data, the core analysis and the

24 seismic is -- typically underpredicts the

25 permeability because we aren't able to capture data

260

1 from these unconsolidated sands. And so that's one

2 of the reasons that we believe applying the 2.5

3 permeability multiplier is reasonable in this case.

4 Q. What was the max perm you observed in the

5 cores?

6 A. So on page 2-24, Table 2-6 has the range

7 of permeabilities from core analysis. So

8 permeability for the high range is 2,700

9 millidarcies.

10 Q. Sorry. I'm just finding it. Did you say

11 2,700?

12 A. Yep. So --

13 Q. Oh, I see. Got it.

14 So your model has 10 to 20 percent at what

15 appears to be 5,000 millidarcies. Does that seem

16 reasonable?

17 A. Given the unconsolidated nature of the

18 Broom Creek, yes. One thing to be noted, I gave

19 you the max range for the TB Leingang permit. The

20 other permits have slightly different data sets,

21 some of which are higher from the core data for

22 those specific stratigraphic test wells.

23 Q. Higher perm?

24 A. Higher permeability. So if I can point

25 you to Exhibit -- the Fischer storage facility

261

1 permit, similar on page 2-24, Table 2-6. The

2 maximum permeability from the core analysis for the

3 Archie Erickson well is over 3,700 millidarcies.

4 Q. When you say the 2.5 multiplier, are you

5 literally saying that you're increasing the perm

6 across the entire reservoir by two and a half

7 times?

8 A. Correct.

9 Q. Based on one injection test?

10 A. Correct. So, again, on our years of

11 experience studying the -- the Broom Creek in

12 multiple forms with core log analysis, well log

13 analysis -- sorry -- core analysis, well log

14 analysis, seismic interpretation, we believe that's

15 reasonable. One thing that should be noted, you

16 know, we felt confident in using that value from

17 this test. We will be using actual operational

18 data to validate our model every five years as part

19 of the reevaluation.

20 Q. Does an overall increase in the modeled

21 permeability across the reservoir allow you in the

22 end to inject higher -- at higher pressures thus

23 resulting in the ability to inject more CO<sub>2</sub> into the

24 ground?

25 A. So the pressure you can inject at is

262

1 constrained by 90 percent of the fracture pressure

2 gradient, so you can't inject higher than that. If

3 you had higher permeability, you would be able --

4 you'd likely be able to inject higher volumes of CO<sub>2</sub>

5 before reaching that.

6 Q. Okay. Can I have you go to page 2-18 and

7 Figure -- sorry, I mean 2-19.

8 A. I'm there.

9 Q. Okay. You have an isopach map indicated

10 on the prior page and the well log of the

11 formation. Other than this data, did you do any

12 kind of research or study of the depositional

13 environments for the formation?

14 A. Yes.

15 Q. And what did you do?

16 A. So the EERC has studied the Broom Creek

17 way back into the early 2000s, so we produced a

18 formation outline in the Broom Creek. Regarding

19 the depositional environment, the gold standard

20 published study on that is a thesis by an author

21 named Rygh that details the depositional

22 environment. EERC has been a part of projects that

23 have drilled and collected core from numerous

24 wells, Broom Creek core, and our evaluation of

25 those core data as well as the 3D seismic confirmed

263

1 Rygh's interpretation of the depositional  
2 environment.

3 Q. Was Rygh looking at certain rock types?  
4 A. Offhand, I can't recall. You know, his  
5 thesis focused on the depositional environment and  
6 he also looked at type logs through those means.  
7 Yes, he would have looked at rock types.

8 Q. Eolian sand dunes and interbedded marine  
9 and lacustrine limestones, are those part of the  
10 depositional environment in the Broom Creek?  
11 A. Are you referring to a specific paragraph  
12 or page from the formation -- or from the --  
13 sorry -- from the permit?  
14 Q. No. I'm asking if those are  
15 depositional -- if those are rock types in the  
16 depositional environment studied by Rygh.  
17 A. I don't believe that there is limestone  
18 within the Broom Creek. I know he describes it  
19 eolian dunes as well as interbedded carbonates  
20 which consist mostly of dolostone as well as  
21 anhydrite.  
22 Q. Did you put a description of the  
23 depositional environment into the application?  
24 A. Yes. It can be found on page 2-16 in the  
25 second sentence under -- in the text at the top.

264

1 We talk about how the formation comprises of  
2 interbedded eolian/nearshore marine sandstone and  
3 dolostone layers with minor amounts of siltstones  
4 and anhydrites.

5 Q. How did your analysis of the depositional  
6 environment affect your analysis of the variability  
7 of the permeability across the reservoir?  
8 A. So I'll speak to -- interpret depositional  
9 environment which is -- can be prevalently seen on  
10 the 3D seismic with attribute analysis. From the  
11 3D seismic, you can actually see dune forms. You  
12 can also see indication of interbedded carbonates  
13 and anhydrites in that.

14 Through evaluation of -- of the 3D seismic  
15 as well as correlation to well logs in the area  
16 analysis of that core, we have an understanding of  
17 the lateral distribution of the different  
18 lithologies within the Broom Creek, particularly as  
19 I mentioned those unconsolidated sands. The Broom  
20 Creek sands come in several different forms. We  
21 have those very unconsolidated sands. We also have  
22 high-angle crossbedded sandstones and things like  
23 that.

24 So all those data sets gave us a better  
25 understanding of the heterogeneity in the

265

1 reservoir; the depositional environment; how those  
2 different reservoir lithologies, particularly the  
3 sands, were distributed across the area; and what  
4 was reasonable and prudent in terms of applying for  
5 rock and petrophysic properties as well as the  
6 multiplier.

7 Q. Are you familiar with the Broom Creek  
8 Formation in Wyoming?  
9 A. I am not.

10 Q. Okay. Are you familiar with how wind  
11 direction can influence deposition and produce sand  
12 dunes elongated in one direction?  
13 A. Yes, I am.

14 Q. And have you seen that phenomenon in the  
15 Broom Creek in North Dakota?  
16 A. Yes, we have. As inferred, we can see  
17 that orientation in the 3D seismic data, and that  
18 orientation was accounted for with using the  
19 acoustic impedance derived from the seismic data  
20 for variograms which are used to distribute  
21 properties in the model.

22 Q. How useful would your model be if you did  
23 not account for the deposition that we just  
24 discussed?  
25 A. Define "useful."

266

1 Q. Would it have had utility to create the  
2 application for Summit for this proceeding?  
3 A. Yes. So there are multiple ways to create  
4 geologic models. The EPA has a guidance document  
5 out there where they suggest modeling best  
6 practices. Some modeling best practices also  
7 include recommendations for simplified models.  
8 That might just include well log data. So even  
9 simple models can have utilities to define  
10 storage -- or define vertical and horizontal  
11 boundaries. Uncertainties with those different  
12 types of models need to be accounted for when  
13 determining appropriate buffers and things of that  
14 nature.

15 Q. Can I have you turn back to page 3-7 and  
16 specifically the Figure 3-4?  
17 A. I'm there.

18 Q. Would you expect a map showing the range  
19 of permeability of the formation to reflect the  
20 deposition of the elongated sand dunes in the Broom  
21 Creek that we just discussed?  
22 A. Yeah. So to -- one comment to make about  
23 that is some of these dunes are reworked. So while  
24 we can see elongated dunes, if you're looking at a  
25 particular slice, there might be difference in

267

1 cementation of the sands and things like that. As  
 2 being a part of the team that interpreted the 3D  
 3 seismic, I can tell you that the elongated dunes  
 4 more orientated northeast to the southwest. And  
 5 based on that orientation, to my trained eye, I can  
 6 see that reflected here on Figure 3-4.  
 7 Q. But only because you had access to that  
 8 seismic data and the 3D modeling that was done with  
 9 it?  
 10 A. Correct.  
 11 Q. How would we replicate the permeability  
 12 distribution without the 3D seismic and the  
 13 attribute analysis?  
 14 A. So if you turn to page 3-2, Section 3.2.3  
 15 talks about the variograms derived from the 3D  
 16 seismic data. These variograms are what were used  
 17 to distribute properties. So the only difference  
 18 in a model made without using acoustic impedance  
 19 derived from the seismic is that you wouldn't have  
 20 that as a control point.  
 21 Q. What would you do without the control  
 22 point?  
 23 A. You would still have the log data and the  
 24 variograms to distribute properties.  
 25 Q. In 3.2.3.2 it states, "Seismic data were

268

1 resampled to the geologic model grid."  
 2 Can you explain what that means?  
 3 A. Yes. The seismic data were sampled at  
 4 intervals related to the bin spacing, which I  
 5 believe were on the order of 80 to 120 feet in this  
 6 case. So we have a data point from each one of  
 7 those bins, and so the seismic data from those bins  
 8 had to be upscaled to the modeled grid cell size.  
 9 Q. And if we use the variograms, we wouldn't  
 10 be able to double-check your interpretations of the  
 11 3D seismic; right?  
 12 A. Correct.  
 13 Q. I'll have you go to page 3-4. My  
 14 electronic copy is marked at least a little weird,  
 15 but --  
 16 A. I'm there.  
 17 Q. Let me start by having you just describe  
 18 what we're looking at here.  
 19 A. On page 3-4 we're looking at Figure 3-1.  
 20 Is that what you're looking at; correct?  
 21 Q. Yes.  
 22 A. So this is a west-east cross-section of  
 23 the geologic model showing the PHIE property from  
 24 the model that was used to distribute permeability  
 25 through the model.

269

1 Q. Are you able to look at this picture and  
 2 find something that you would interpret to be  
 3 undulating sand dunes?  
 4 A. So the high porosity zones in yellow and  
 5 red represent those reservoir sands. The dunes  
 6 here in the Broom Creek is a dune complex where  
 7 there is deposition of sediments and formation of  
 8 the dunes. When sea level rose, there was  
 9 reworking of the dunes. When sea level fell, there  
 10 is again deposition and reworking of -- deposition  
 11 sediments, reworking of -- of the sands to form  
 12 dune complexes. So it's a stacked dune complex.  
 13 Interpretation from a cross-section alone  
 14 makes it difficult to interpret the dune complex.  
 15 That's why a plainer view would be required to  
 16 interpret dune complexes with more certainty.  
 17 Q. Is there anything you see on Figure 3-1  
 18 that would be an indication to you of those types  
 19 of undulating sand dunes?  
 20 A. Yes. Again, based on my involvement and  
 21 experience with interpretation of the larger data  
 22 set, my trained eye can -- can pick out the dune  
 23 forms or the stacked dune complexes.  
 24 Q. Based on the knowledge and information you  
 25 have from reviewing the seismic data?

270

1 A. Correct.  
 2 Q. What were the actual test results from the  
 3 injection well that you used to make the adjustment  
 4 to the model on the permeability?  
 5 A. The results from the injection tests were  
 6 a calculated permeability.  
 7 Q. Calculated from what data derived from the  
 8 injection test?  
 9 A. I'll defer that question to a later  
 10 witness.  
 11 Q. Do you know where in the application it's  
 12 referenced?  
 13 A. Outside of the paragraph you previously  
 14 had me review about the 2.5 X multiplier, I do not  
 15 believe that test is discussed in terms of  
 16 interpretation.  
 17 Q. Okay. I apologize. I needed to find my  
 18 place here. But back on 3-15, that paragraph I  
 19 referred to earlier, it says, "The permeability  
 20 multiplier was calculated based on the area of  
 21 study during the injectivity test, the radius of  
 22 investigation, and the permeability thickness  
 23 (transmissibility) values from the pressure  
 24 transient analysis."  
 25 Were you involved in determining or

271

1 assessing the area of study during the injectivity  
 2 test?  
 3 **A.** I was not, but we have a witness coming up  
 4 that was involved with this testing.  
 5 **Q.** And were you involved in determining the  
 6 radius of investigation?  
 7 **A.** I was not involved in interpretation of  
 8 the well test results.  
 9 **Q.** Okay. And I don't know what this means so  
 10 I don't know if it's that, but were you involved in  
 11 permeability thickness (transmissibility) values  
 12 from the pressure transient analysis?  
 13 **A.** No.  
 14 **Q.** Okay. Were you involved in deciding on  
 15 whether or not the global multiplier should be the  
 16 number 2.5?  
 17 **A.** Yes.  
 18 **Q.** Okay. What data did you review in order  
 19 to assess what that number should be, in your  
 20 opinion?  
 21 **A.** Results of the well tests were presented  
 22 to me. I've also been involved or aware of  
 23 previous studies with similar injection tests as  
 24 previously discussed, as well as knowledge, again,  
 25 of the Broom Creek and the other data sets that

272

1 support use of a permeability multiplier.  
 2 **Q.** And the studies you reference is just the  
 3 one well in Project Tundra when that was done?  
 4 **A.** Correct.  
 5 **Q.** And when you say you were given the  
 6 results of the injection well test, does that -- I  
 7 don't know if I got that right. Is that right?  
 8 **A.** I was presented the results by subject  
 9 matter experts.  
 10 **Q.** Okay. And, generally speaking, what did  
 11 they present to you as the results?  
 12 **A.** What's listed in the paragraph. Their  
 13 interpretation from the injection tests of those  
 14 different parameters, including radius of  
 15 investigation, permeability thickness and such.  
 16 **Q.** And how did you use those, then, to  
 17 determine a multiplier of 2.5?  
 18 **A.** So the -- the permeability -- the summary  
 19 of those results was the -- the permeability was  
 20 higher, on the order of 2.7 or so times higher than  
 21 permeability from some of the laboratory analysis.  
 22 **Q.** Are you aware of what a calculated KH was?  
 23 **A.** I don't recall at this time.  
 24 **Q.** Were you given that number at some point?  
 25 **A.** I -- I don't recall at this time. I know

273

1 we've looked at KH in terms of -- of the model. I  
 2 was given the permeability thickness.  
 3 **Q.** And what was that?  
 4 **A.** I don't recall at this time.  
 5 **Q.** Do you have the time height?  
 6 **A.** I don't have the test results in front of  
 7 me.  
 8 **Q.** Okay. But were you given those -- that  
 9 information?  
 10 **A.** I don't recall specifically, but I believe  
 11 that information is in the well testing report  
 12 that's on the NDIC website.  
 13 **Q.** All of the information included the --  
 14 including the calculated KH is all on the NDIC  
 15 website?  
 16 **A.** I would have to review it. I can't speak  
 17 to that level of specifics.  
 18 **Q.** And can you explain -- you've said that it  
 19 was -- the difference in the perm was calculated at  
 20 2.7 and you went with 2.5. Can you explain why?  
 21 And actually let me back up.  
 22 The number calculated from the injection  
 23 test was 2.7; right?  
 24 **A.** On the order -- approximately. I don't  
 25 recall the exact value.

274

1 **Q.** Okay. And you decided to go with a  
 2 multiplier of 2.5. Why use 2.5 instead of the  
 3 actual value?  
 4 **A.** We felt it was a conservative assumption.  
 5 **Q.** Why do you describe it with the word  
 6 "conservative"? How is it conservative?  
 7 **A.** It's lower than the -- the test results  
 8 reflected.  
 9 **Q.** Is there any reason to assume it's more  
 10 likely that the perm is lower than the test result  
 11 than higher?  
 12 **A.** So I don't think we have data that would  
 13 indicate which is the appropriate choice to go,  
 14 higher or lower. We chose 2.5 based on our  
 15 knowledge of the Broom Creek. We believe that was  
 16 a conservative estimate to use in the model. As we  
 17 discussed previously, higher permeability might  
 18 result in higher volume of CO<sub>2</sub> but also potential  
 19 higher pressure. So using the more conservative,  
 20 going on a lesser number, helps ensure that we're  
 21 not overestimating CO<sub>2</sub> plume size.  
 22 **Q.** And are you being conservative because  
 23 you're concerned about the risk of having that  
 24 number be 2.7 -- having a delta of 2.7 between the  
 25 injection test and your modeled perm?

275

1       **A.** There's -- there's not a concern with  
 2 using the exact value. We wanted to be  
 3 conservative in what we chose in terms of how we  
 4 defined the horizontal and the vertical boundaries.

5       **Q.** But isn't the actual data the best data  
 6 that you have?

7       **A.** I -- again, it's not the only data set we  
 8 have.

9       **Q.** Okay. So you're putting less weight on  
 10 the data derived from the injection well test than  
 11 from the projected permeability from the other data  
 12 you've used?

13       **A.** Not less weight. We just chose to choose  
 14 a conservative value.

15       **Q.** But when you say the word "conservative,"  
 16 why is it more conservative to go to 2.5 from 2.7  
 17 rather than going to 2.9 from 2.7?

18       **A.** Can you repeat the last part of the  
 19 question?

20       **Q.** Well, when you say that you were choosing  
 21 2.5 rather than 2.7 because you're being  
 22 conservative, I'm asking why it's conservative to  
 23 adjust down to 2.5 versus adjusting up to 2.9. Why  
 24 is that conservative?

25       **A.** Again, as you mentioned, this is a single

276

1 test and it was -- this permeability multiplier  
 2 applied to the model which the model was used to  
 3 define the storage facility boundaries. In then  
 4 the development of the project, we felt it was  
 5 prudent not to overpredict the plume size if the  
 6 reservoir doesn't act like that. Then we've  
 7 permitted an area much larger than would be needed.

8           HEARING EXAMINER GARNER: Okay. I think  
 9 this is a good place to stop. We will resume  
 10 tomorrow morning at 9 a.m. So that will, I guess,  
 11 conclude our hearings for the day. Off the record  
 12 at 6:30 p.m.

13           (Recessed at 6:30 p.m., Tuesday, the 11th  
 14 day of June, 2024.)

# NORTH DAKOTA

## OIL AND GAS DIVISION

In re application of Summit : Case No(s). 30869  
Carbon Storage #1, LLC requesting : 30870  
consideration for the geologic : 30871  
storage of carbon dioxide in the : 30872  
Broom Creek Formation from the : 30873  
Midwest Carbon Express Pipeline in: 30874  
the storage facility located in : 30875  
Sections 31, 32, 33, and 34, : 30876  
Township 142 North, Range 87 West,: 30877  
Sections 1, 11, 12, 13, 14, 15, : 30878  
22, 23, 24, 25, 26, 35, and 36, : 30879  
Township 141 North, Range 88 West,: 30880  
Sections 2, 3, 4, 5, 6, 7, 8, 9, :  
10, 11, 14, 15, 16, 17, 18, 19, :  
20, 21, 22, 23, 25, 26, 27, 28, :  
29, 30, 31, 32, 33, 34, and 35, :  
Township 141 North, Range 87 West,:  
Sections 1, 2, 3, and 12, Township:  
140 North, Range 88 West and :  
Sections 4, 5, 6, and 7, Township :  
140 North, Range 87 West, Mercer, :  
Morton, and Oliver Counties, ND. :

In re application of Summit :  
Carbon Storage #1, LLC to :  
consider the amalgamation of the :  
storage reservoir pore space, in :  
which the Commission may require :  
that the pore space owned by :  
nonconsenting owners be included :  
in the geologic storage, as :  
required to operate the Summit :  
Carbon Storage #1, LLC storage :  
facility located in Sections 31, :  
32, 33, and 34, Township 142 :  
North, Range 87 West, Sections 1, :  
11, 12, 13, 14, 15, 22, 23, 24, :  
25, 26, 35, and 36, Township 141 :  
North, Range 88 West, Sections 2, :  
3, 4, 5, 6, 7, 8, 9, 10, 11, 14, :  
15, 16, 17, 18, 19, 20, 21, 22, :  
23, 25, 26, 27, 28, 29, 30, 31, :

32, 33, 34, and 35, Township 141 :  
North, Range 87 West, Sections 1, :  
2, 3, and 12, Township 140 North, :  
Range 88 West and Sections 4, 5, :  
6, and 7, Township 140 North, :  
Range 87 West, Mercer, Morton, :  
and Oliver Counties, ND, in the :  
Broom Creek Formation. :

In re application of Summit :  
Carbon Storage #1, LLC for an :  
order of the Commission :  
determining the amount of :  
financial responsibility for the :  
geologic storage of carbon dioxide: :  
from the Midwest Carbon Express :  
Pipeline in the storage facility :  
located in Sections 31, 32, 33, :  
and 34, Township 142 North, Range :  
87 West, Sections 1, 11, 12, 13, :  
14, 15, 22, 23, 24, 25, 26, 35, :  
and 36, Township 141 North, Range :  
88 West, Sections 2, 3, 4, 5, 6, :  
7, 8, 9, 10, 11, 14, 15, 16, 17, :  
18, 19, 20, 21, 22, 23, 25, 26, :  
27, 28, 29, 30, 31, 32, 33, 34, :  
and 35, Township 141 North, Range :  
87 West, Sections 1, 2, 3, and 12,: :  
Township 140 North, Range 88 West :  
and Sections 4, 5, 6, and 7, :  
Township 140 North, Range 87 West,: :  
Mercer, Morton, and Oliver :  
Counties, ND, in the Broom Creek :  
Formation. :

In re motion to consider :  
establishing the field and pool :  
limits for lands located in :  
Sections 31, 32, 33, and 34, :  
Township 142 North, Range 87 West,: :  
Sections 1, 11, 12, 13, 14, 15, :  
22, 23, 24, 25, 26, 35, and 36, :  
Township 141 North, Range 88 West,: :  
Sections 2, 3, 4, 5, 6, 7, 8, 9, :  
10, 11, 14, 15, 16, 17, 18, 19, :  
20, 21, 22, 23, 25, 26, 27, 28, :  
29, 30, 31, 32, 33, 34, and 35, :

Township 141 North, Range 87 West, :  
Sections 1, 2, 3, and 12, Township :  
140 North, Range 88 West and :  
Sections 4, 5, 6, and 7, Township :  
140 North, Range 87 West, Mercer, :  
Morton, and Oliver Counties, ND, :  
subject to the application of :  
Summit Carbon Storage #1, LLC for :  
the geologic storage of carbon :  
dioxide in the Broom Creek :  
Formation, and enact such special :  
field rules as may be necessary. :

In re application of Summit :  
Carbon Storage #2, LLC requesting :  
consideration for the geologic :  
storage of carbon dioxide in the :  
Broom Creek Formation from the :  
Midwest Carbon Express Pipeline :  
in the storage facility located in :  
Sections 27, 28, 29, 32, 33, 34, :  
and 35, Township 143 North, Range :  
88 West, Sections 1, 2, 3, 4, 5, :  
6, 7, 8, 9, 10, 11, 12, 13, 14, :  
15, 16, 17, 18, 19, 20, 21, 22, :  
23, 24, 25, 26, 27, 28, 29, 30, :  
32, 33, 34, 35, and 36, Township :  
142 North, Range 88 West, Sections :  
5, 6, 7, 8, 17, 18, 19, 20, 29, :  
30, and 31, Township 142 North, :  
Range 87 West, and Sections 1, 2, :

28, 29, 30, 32, 33, 34, and 35, :  
Township 142 North, Range 86 West, :  
and Sections 6, 7, 17, 18, 19, and :  
20, Township 142 North, Range 85 :  
West, Oliver County, ND, in the :  
Broom Creek Formation. :

In re application of Summit :  
Carbon Storage #3, LLC for an :  
order of the Commission :  
determining the amount of :  
financial responsibility for the :  
geologic storage of carbon dioxide :  
from the Midwest Carbon Express :  
Pipeline in the storage facility :  
located in Section 36, Township :  
143 North, Range 87 West, Sections :  
19, 20, 21, 28, 29, 30, 31, 32, :  
33, 34, 35, and 36, Township 143 :  
North, Range 86 West, Sections 1, :  
2, 11, 12, 13, 14, and 24, :  
Township 142 North, Range 87 West, :  
Sections 1, 2, 3, 4, 5, 6, 7, 8, :  
9, 10, 11, 12, 13, 14, 15, 16, 17, :  
18, 19, 20, 21, 22, 23, 24, 25, :  
26, 27, 28, 29, 30, 32, 33, 34, :  
and 35, Township 142 North, Range :  
86 West, and Sections 6, 7, 17, :  
18, 19, and 20, Township 142 :  
North, Range 85 West, Oliver :  
County, ND, in the Broom Creek :  
Formation. :

In re motion of the Commission to :  
consider establishing the field :  
and pool limits for lands located :  
in Section 36, Township 143 North, :  
Range 87 West, Sections 19, 20, :  
21, 28, 29, 30, 31, 32, 33, 34, :  
35, and 36, Township 143 North, :  
Range 86 West, Sections 1, 2, 11, :  
12, 13, 14, and 24, Township 142 :  
North, Range 87 West, Sections 1, :  
2, 3, 4, 5, 6, 7, 8, 9, 10, 11, :  
12, 13, 14, 15, 16, 17, 18, 19, :  
20, 21, 22, 23, 24, 25, 26, 27, :  
28, 29, 30, 32, 33, 34, and 35, :  
Township 142 North, Range 86 West, :  
and Sections 6, 7, 17, 18, 19, and :  
20, Township 142 North, Range 85 :  
West, Oliver County, ND, subject :  
to the application of Summit :  
Carbon Storage #3, LLC for the :  
geologic storage of carbon dioxide :  
in the Broom Creek Formation, and :  
enact such special field rules as :  
may be necessary. :

TRANSCRIPT OF HEARING

VOLUME II - (Pages 277 - 552)

Taken At  
1000 East Calgary Avenue  
Bismarck, North Dakota  
June 12, 2024

BEFORE DAVID P. GARNER  
-- HEARING EXAMINER --

## A P P E A R A N C E S

NDIC STAFF PRESENT:

MR. LYNN HELMS  
MR. MARK BOHRER  
MR. RICHARD SUGGS

1           (The following proceedings were had and  
2       made of record herein, commencing at 9:06 a.m.,  
3       Wednesday, the 12th day of June, 2024:)

4           HEARING EXAMINER GARNER: We are on the  
5       record for hearings in the matters listed in the  
6       North Dakota Industrial Commission Hearing Docket  
7       for June 12. I'm David Garner, hearing examiner  
8       for these hearings. We're at the hearing room for  
9       the Department of Mineral Resources, Oil & Gas  
10      Division, and it is 9:08 a.m.

11           We will resume our hearings for Case  
12      Numbers 30869 through 30880. I notice new counsel  
13      appeared at the table, so I'll give everyone an  
14      opportunity for all interested parties to please  
15      come forward again.

16           MR. BENDER: Thank you, Mr. Examiner.  
17      I'll introduce Tom. He doesn't need any  
18      introduction, but with us today is Tom Throne.  
19      He's going to be assisting with Summit in this  
20      application.

21           HEARING EXAMINER GARNER: Okay.

22           MR. BRAATEN: Derrick Braaten, Braaten Law  
23      Firm, on behalf of the landowner intervenors. With  
24      me is my paralegal, Desirae Zaste, and client Kirk  
25      Swenson.

1           MR. BENDER: I apologize. I thought you  
2 were just looking for an introduction of the new  
3 counsel.

4           HEARING EXAMINER GARNER: No, that's --

5           MR. BENDER: Did you want me to make  
6 another appearance or --

7           HEARING EXAMINER GARNER: No. That's  
8 fine.

9           MR. BENDER: Okay.

10          HEARING EXAMINER GARNER: That's fine.  
11 Just a quick note. We're going to resume with the  
12 cross-examination of the two witnesses that were  
13 being crossed by Mr. Braaten yesterday. Change,  
14 though. We're going to then at that point in time  
15 allow Summit to call its remaining witnesses, give  
16 the Commission a chance to respond to them -- or  
17 question them. And then you'll have the remainder  
18 of the time to cross-examine those witnesses.

19          MR. BRAATEN: Okay. And, Your Honor, I  
20 don't want to be difficult or take up time. I just  
21 want to put on the record that I do object to that  
22 process.

23          HEARING EXAMINER GARNER: Okay.

24          MR. HELMS: 6:30.

25          HEARING EXAMINER GARNER: Oh, I'm sorry.

1 And we're going to have a deadline today again of  
2 6:30 p.m., and if we are not done, we will be back  
3 here tomorrow morning at 9 a.m.

4 Okay. With that, I think we can proceed.

5 MR. HELMS: They're still under oath.

6 HEARING EXAMINER GARNER: They're still  
7 under oath.

8 **CONTINUED CROSS-EXAMINATION**

9 **BY MR. BRAATEN:**

10 Q. I wasn't going to ask this, but since it  
11 came up, do you understand that you're still under  
12 oath?

13 A. (BY MS. DOUGLAS) I do.

14 Q. Okay. We were discussing the CO<sub>2</sub> plume  
15 model yesterday, and I want to start by just asking  
16 if you have an understanding within the regulatory  
17 framework for Class 6 wells why a plume model is  
18 constructed?

19 A. I do.

20 Q. And what is that understanding?

21 A. So under the North Dakota UIC Class VI  
22 regulations, a geologic model is constructed to  
23 help define the horizontal and vertical boundaries  
24 of a storage reservoir.

25 Q. For what purpose or reason?

1           A.     The purpose of this is to define the  
2     boundaries of the storage reservoir, in this case  
3     which would be the storage facility, which the  
4     regulations require pore space owners within that  
5     storage facility to be equitably compensated.  
6     Also, the modeling and simulation, it's constructed  
7     to help delineate the area of review, which is also  
8     a requirement of the statutes to delineate the area  
9     of review.

10          Q.     And the delineation of the area of review  
11     is also the primary requirement or reason for  
12     creating that model under the Safe Drinking Water  
13     Act?

14          A.     So we're talking about two sets of  
15     regulations here. So in -- in North Dakota UIC  
16     Class VI regulations, as I mentioned, the modeling  
17     is a tool to determine the AOR in the storage  
18     facility area. The Safe Water Drinking Act, under  
19     that, I believe, the EOA has its own set of UIC  
20     Class VI rules, which the North Dakota UIC Class VI  
21     rules are based on and are more stringent than. In  
22     the EPA rules, it is my understanding that modeling  
23     and simulation is used to define an area of review  
24     as well.

25          Q.     Is North Dakota's underground injection

1 control program regulation for Class VI wells  
2 adopted pursuant to the Safe Drinking Water Act?

3 A. It is, and it is more stringent in terms  
4 that it goes above and beyond and also has  
5 stipulations for a storage facility area, pore  
6 space leasing, which the EPA UIC Class VI rules do  
7 not.

8 Q. And when the EPA promulgated its Class VI  
9 rules, the methodologies it used for delineating --  
10 delineating an area of review were focused on the  
11 purpose and function of protecting USDWs; right?

12 A. That's correct, and North Dakota  
13 Administrative Code is as well. So they define the  
14 area of review as the region surrounding the  
15 geologic sequestration project where underground  
16 sources of drinking water may be endangered by the  
17 CO<sub>2</sub> injection activities.

18 Q. And so you're modeling the areal extent of  
19 the CO<sub>2</sub> plume because the regulations require you to  
20 do that in order to protect drinking water sources?

21 A. Modeling the simulation is required to  
22 evaluate potential impact and endangerment on any  
23 underground sources of drinking water in which  
24 you're required to define an area of review where  
25 you're required to monitor and ensure that you're

1 not endangering any underground sources of drinking  
2 water.

3 Q. You've noticed -- you've noted a couple of  
4 times that North Dakota's regulations are more  
5 stringent than the EPA regulations. That's because  
6 the EPA regulations require that any state being  
7 granted primacy have a set of regulations that are  
8 more stringent than EPA's?

9 A. I'm not familiar with the specific  
10 requirements. I know that they can't be any  
11 lesser.

12 Q. Okay. I've handed you what has been  
13 marked as Exhibit LO-83. Can you tell me if you've  
14 seen that document before?

15 A. I personally have not.

16 Q. And when you say "I personally have not,"  
17 are you aware of others who have that you're  
18 thinking of?

19 A. Not specifically, no.

20 Q. If you look at the bullet points in the  
21 middle, you'll notice a number of descriptions of  
22 various data and input files. Is there anything in  
23 those bullet points that you can identify that was  
24 not provided to the Industrial Commission by EERC?

25 A. Upon request from the Commission, the EERC

1 had provided the DMR with the .DAT file, which is  
2 our simulation model input file for CMG, as well as  
3 our results file in the form of a .SR3, as well as  
4 shapefiles for the maps that were generated.  
5 Outside of those data sets, we did not provide any  
6 additional data to the DMR.

7 Q. You said for the maps that were provided  
8 outside of the data. What maps are you referring  
9 to?

10 A. The maps in the storage facility area. So  
11 we provided shapefiles for the storage facility  
12 boundary, the area of review boundary and such.

13 Q. Okay. And you're saying you provided the  
14 shapefiles but not necessarily the particular maps  
15 you generated from them?

16 A. Correct.

17 Q. Okay.

18 A. Let me correct for that. The maps are  
19 provided in the permit itself, so we didn't provide  
20 maps separately. They're within the permit itself.

21 Q. Okay. That's fair.

22 So this first one, all of the input files  
23 for the PHREEQC model were provided to the  
24 Commission?

25 A. No. As I stated, just the .DAT file for

1 the numerical simulations which were used to define  
2 the horizontal and the vertical boundaries of the  
3 reservoir.

4 Q. You didn't give them an input file for the  
5 PHREEQC model?

6 A. We did not, no. It was not requested.

7 Q. It's in your possession, though?

8 A. The EERC has the data.

9 Q. Sorry. Yes. EERC.

10 And EERC is Summit's agent and  
11 representative with respect to that data?

12 A. The ownership of the data is governed  
13 under our specific contracts with Summit including  
14 our NDA with them that govern data ownership.

15 Q. EERC has a nondisclosure agreement with  
16 Summit?

17 A. Yes.

18 Q. Who proposed that?

19 A. I was not involved in those discussions.  
20 It's a standard -- standard practice we have with  
21 most of our clients, though.

22 Q. Is that because your licenses for the  
23 computer modeling programs are academic licenses?

24 A. No. Commercial licenses were procured for  
25 this project as this was a commercially contracted

1 project.

2 Q. Did Summit compensate for the cost of the  
3 subscriptions for the programs on a commercial  
4 basis?

5 A. The EERC procured commercial licenses and  
6 the costs of those commercial licenses were billed  
7 to Summit. Yes.

8 Q. Okay. Were they temporary subscriptions?

9 A. Yes. So the licenses have a time period  
10 associated with them. Commonly, we procure  
11 licenses on the order of a month, two-month,  
12 three-month licenses, depending on the duration of  
13 the time period in the project we need the license  
14 to perform the scope.

15 Q. So I want to go back to my prior question.  
16 Other than the input model for the PHREEQC model --  
17 sorry. Let me start over.

18 Other than the input file for the PHREEQC  
19 model, is there anything listed in these bullet  
20 points that was not provided by EERC to the  
21 Industrial Commission?

22 A. Yes. As I mentioned, the only input data  
23 that was provided can be found in your last bullet  
24 point in terms of what I would call the  
25 simulation -- or the numerical reservoir simulation

1     model data decks and the output files. Those were  
2     the two pieces of data which I am saying is the  
3     .DAT file and the .SR3 file. Those are the only  
4     two data sets from this list that were provided.

5           Q.     So if you look at the third bullet point,  
6     is there anything there that was provided to the  
7     Industrial Commission?

8           A.     Yes. Thank you for correcting me. So all  
9     core analysis data was provided to the Industrial  
10    Commission as well as the North Dakota Geological  
11    Survey through submission to the North Dakota core  
12    library staff. And as required, all well log data,  
13    formation testing, fluid analysis was provided  
14    as -- as part of completions reports for the three  
15    stratigraphic test wells that were drilled. So  
16    those were technically provided.

17          Q.     When you look through these bullet points  
18    on this letter, do you have an understanding of  
19    what is being referenced in all of these? Is there  
20    anything you don't understand what is being  
21    referenced?

22          A.     No. I understand.

23          Q.     If I asked you to go back to EERC today  
24    and sit down and pull together an external hard  
25    drive and put this data on that external hard drive

1 and give it to me, approximately how long would it  
2 take you to do that?

3 A. That would involve the procurement of  
4 commercial licenses to access.

5 Q. No. Assuming that you have a commercial  
6 license, which you do for all of this, if you  
7 needed to go to your office, take all of this data  
8 and put it on an external hard drive, how long  
9 would that take you?

10 A. Days to weeks.

11 Q. It would take you weeks to put this data  
12 on a hard drive? You're telling me that?

13 A. To ensure that we have the proper data, QC  
14 it, and we ran multiple iterations.

15 Q. No. I'm asking you to take this data that  
16 you understand what all of it is, export it,  
17 transfer those files onto an external hard drive,  
18 how long?

19 A. One to two weeks.

20 Q. It would take you one to two weeks to  
21 transfer those files to a hard drive, but you can  
22 start from scratch with publicly available data and  
23 replicate and recreate that entire model in four  
24 weeks?

25 A. So the publicly available data would be

1 coming from single data bases. The way the EERC's  
2 file structure and the iterations of our models,  
3 the amount of data we have, it's my opinion knowing  
4 our data storage, the amount of data we have, the  
5 different iterations of modeling simulations done  
6 for this project, I would estimate it would take  
7 our staff that amount of time to ensure that we had  
8 the proper data to be transferred.

9 Q. But you keep saying -- you're saying  
10 ensure we have the proper data to be transferred.  
11 I'm saying physically how long does it take to  
12 click the buttons on the computer to tell the files  
13 in the computer to transfer them to an external  
14 hard drive and how long does it take the computer  
15 to process that file transfer and get it onto the  
16 external hard drive? I'm not talking about quality  
17 control or review.

18 A. Okay. I can't speculate. I don't know  
19 the size of the data in terms of megabytes,  
20 gigabytes or the speed to upload it.

21 Q. So you have no idea how long it would take  
22 to put this on an external hard drive and send it  
23 to us?

24 A. I gave you an estimated range of what I  
25 believe it would take.

1 Q. Three weeks?

2 A. I believe I said one to two.

3 Q. One to two weeks.

4 And you're still saying that you could  
5 also replicate the entire model yourself from  
6 public data in just four weeks? Can you explain  
7 that?

8 A. I believe I did already answer that.

9 Q. Why does it only take two weeks to  
10 transfer the files onto a hard drive but you can  
11 take and recreate everything in four weeks?

12 A. I believe I already answered that.

13 Q. And you think that sounds plausible?

14 A. I gave a range and in my opinion of what  
15 it would take.

16 Q. Okay. Were you asked to do that at any  
17 point?

18 A. No.

19 Q. Were you at any point advised that you  
20 might need to make data available to an opposing  
21 party in any kind of legal proceeding for Summit?

22 A. I was made aware that data may be  
23 requested. Not specifically that it would need to  
24 be provided.

25 Q. Were you told that it would not need to be

1 provided?

2 MR. BENDER: I'm going to object insofar  
3 as it might get into issues on attorney/client  
4 privilege. So if any of this was discussed with  
5 you while I was present on the phone or whatever or  
6 Ty, I'd instruct you not to answer it.

7 MR. BRAATEN: Are you asserting the  
8 privilege on behalf of Summit or EERC?

9 MR. BENDER: Summit.

10 Q. (MR. BRAATEN CONTINUING) At any time when  
11 there was no representative of Summit, other than  
12 Mr. Bender, were you told that -- or there was no  
13 representative of Summit present for the  
14 conversation, at any point were you told that you  
15 would not need to provide data?

16 A. No. I was involved in discussions to  
17 determine what it would take for us to provide that  
18 data. I was not told we would not have to provide  
19 it. I was told as a potential we may have to.

20 Q. Who were you told that by?

21 A. Mr. Lonny Jacobson who is our direct point  
22 of communication with the Summit team.

23 Q. Is he with EERC or Summit?

24 MR. BENDER: Your Honor, I'm going to  
25 object. We're getting into issues having to do

1 with discovery. These issues are before the  
2 Commission in a motion to compel. I don't think  
3 it's appropriate to try to litigate that here. We  
4 haven't had an opportunity to respond to that  
5 motion to compel, so I'm going to object to this  
6 whole line of questioning.

7 HEARING EXAMINER GARNER: I'm going to  
8 overrule.

9 MR. BENDER: Okay. Thank you.

10 Q. (MR. BRAATEN CONTINUING) Who does  
11 Lonny -- did you say Lonny Jacobson?

12 A. Yeah.

13 Q. Who does he work for?

14 A. The Energy & Environmental Research  
15 Center.

16 Q. Okay. When did you talk to him about the  
17 potential of having to provide data?

18 A. Can you clarify "provide data"? To whom?

19 Q. We just talked about a conversation you  
20 had had with Lonny in which you indicated that you  
21 had not been told that you would not need to  
22 provide data. Do you recall that conversation?

23 A. I do. It was after discovery was  
24 submitted.

25 Q. And when you say "after discovery was

1 submitted," are you referring to the request for  
2 data and information that were sent by me on behalf  
3 of the intervenors?

4 A. Correct.

5 Q. Okay. What did he ask you about that  
6 data?

7 A. What effort and software licenses would be  
8 needed to compile that data.

9 Q. And just tell me fully what your response  
10 to that was when you talked to him at that time?

11 A. We provided him with a specific list of  
12 the software licenses needed, the data as well as  
13 things, like I discussed yesterday, about some of  
14 the data sets being acquired from data brokers that  
15 the specific digitized logs in question are  
16 governed by a license agreement.

17 Q. Did you make a determination that because  
18 of those license agreements you were unwilling to  
19 provide those data sets?

20 A. EERC did not make that determination. We  
21 provided information to Summit on what it would  
22 take for us to produce those data sets.

23 Q. With respect to everything that's listed  
24 in Exhibit 83 in those bullet points, first, EERC  
25 has itself all of that data related to Summit's

1 project; right?

2 A. Yes.

3 Q. And has EERC provided all of that data to  
4 Summit itself?

5 A. I'm unsure. I don't believe we have  
6 provided every piece of data yet.

7 Q. So Summit doesn't even have all of the  
8 data that EERC has?

9 A. I can't comment on that with certainty.

10 Q. Well, did you just say that EERC has not  
11 provided all of this data to Summit?

12 MS. DOUGLAS: Could you read back what I  
13 stated?

14 (Record read as requested.)

15 MS. DOUGLAS: So I believe I said I'm  
16 unsure, I'm uncertain about that. I don't have a  
17 definitive answer.

18 Q. (MR. BRAATEN CONTINUING) Okay. What did  
19 Lonny tell you about his conversations with Summit  
20 about it?

21 A. That we would just not have to provide it  
22 at this time. A determination was not made on  
23 whether we would be providing it or not.

24 Q. At any point were you asked to start  
25 compiling the data in the potential event that you

1 did have to provide it?

2 A. No, because as I mentioned, we'd be  
3 required to procure software licenses.

4 Q. For what?

5 A. To open the model, take out any data. For  
6 example, to open the Petrel model, we'd need a  
7 Petrel license in order to take out the digitized  
8 well logs that are governed by that license  
9 agreement.

10 Q. So the temporary subscriptions you had for  
11 the models, have those lapsed at this point?

12 A. They have.

13 Q. Okay. So you didn't want to export the  
14 data because in order to do that, you would have  
15 had to buy another subscription just to export the  
16 data out of the models?

17 A. Again, the EERC's contracted to perform  
18 this scope by Summit Carbon Storage, and so they  
19 would have had to approve and authorize us to  
20 procure the software.

21 Q. And they didn't want to pay for the  
22 software?

23 MR. BENDER: If you know.

24 MS. DOUGLAS: I -- I don't know. I was  
25 not involved in those discussions.

1           Q.     (MR. BRAATEN CONTINUING) Well, you're the  
2 one that just told me that the need to procure new  
3 licenses was part of the reason for not exporting  
4 or starting on the export of the data; right?

5           A.     We would need to be authorized by Summit  
6 to start those activities.

7           Q.     And they never did that?

8           A.     No.

9           Q.     Did Lonny ask them if they would like to  
10 authorize that?

11          A.     I'm not privy to those discussions.

12          Q.     The PHREEQC model is a free model, though,  
13 that anyone can use and there would be no barrier  
14 with subscriptions to putting all that data  
15 together; right?

16          A.     Correct. As I testified, though,  
17 yesterday, I believe that all of the input data  
18 used for that is described in the permit itself.

19          Q.     Have you personally had any direct  
20 communications with the employees or members of the  
21 North Dakota Industrial Commission about this  
22 matter in the last two weeks?

23          A.     I have not, no.

24          Q.     Do you know if Lonny has?

25          A.     I'm not aware if he has or not, but I do

1 not believe he has.

2 Q. As part of your work on the -- the Summit  
3 project, did you do any work related to the surface  
4 facilities?

5 A. No, I did not.

6 Q. There was a comment yesterday that I  
7 believe -- and you can correct me if I'm wrong, but  
8 I believe you said that these injection wells will  
9 not endanger human health. Would you agree with  
10 that?

11 A. I believe Caitlin testified to human  
12 health.

13 Q. Okay. And did I hear it right or do you  
14 agree that the testimony was that these injection  
15 wells, the Class VI wells, will not endanger human  
16 health?

17 A. (BY MS. OLSEN) I believe I testified to  
18 the injection wells have engineering protocol in  
19 place that would not endanger human health or the  
20 environment in relation to CO<sub>2</sub> injection activities.

21 Q. Thank you. In making that statement, did  
22 you consider the potential of CO<sub>2</sub> releases from  
23 those surface facilities such as valves, blowouts,  
24 things of that nature?

25 A. That was discussed later on in the permit.

1       So my references to that are in relation to the  
2       injection well and the review that was done on the  
3       injection well specifically.

4           Q.     Would it also be accurate to say  
5       specifically with respect to the things that happen  
6       downhole at the injection well?

7           A.     The engineering safeguards in place  
8       downhole are such that they would prevent migration  
9       of CO<sub>2</sub> into USDWs or the atmosphere.

10          Q.     What about the engineering safeguards  
11       between the terminus point of the Midwest Carbon  
12       Express Pipeline and the wellhead?

13          A.     (BY MS. DOUGLAS) We believe we have  
14       witnesses coming up who are better suited to  
15       testify to that.

16          Q.     Okay. We had a discussion yesterday about  
17       the permeability adjustment with the 2.5  
18       multiplier. Do you recall that?

19          A.     I do.

20          Q.     Did you or Lonny have conversations with  
21       Summit at any point regarding that issue?

22          A.     We did.

23          Q.     And what were those conversations?

24          A.     So as I testified yesterday, the results  
25       showed a slightly higher permeability that could

1 have been used to justify a higher multiplier. In  
2 discussions with EERC and Summit, EERC providing  
3 technical advisement to use a lower value, those  
4 discussions included discussions with Summit from a  
5 business case. They wanted to permit the site to  
6 take a certain amount of CO<sub>2</sub> and store CO<sub>2</sub> within a  
7 certain area.

8 And so through sensitivity modeling and  
9 business considerations, it was a joint  
10 determination to use 2.5. Additionally, the  
11 Commission has approved a permit for the Broom  
12 Creek Formation that has used 2.5 as well.

13 Q. What were the business considerations  
14 Summit expressed regarding the use of the 2.5  
15 factor?

16 A. Again, I just discussed the amount of CO<sub>2</sub>  
17 they were targeting and the area -- the area to be  
18 permitted for CO<sub>2</sub>. I discussed a little bit  
19 yesterday I didn't want to overestimate the storage  
20 facility area and then not inject that amount of CO<sub>2</sub>  
21 to where we would be over-leasing the area and not  
22 using it.

23 Q. So Summit was -- Summit's preference would  
24 be that that perm adjustment be a lower number  
25 based on that business consideration?

1           A.     Through discussions with EERC and Summit,  
2     the 2.5 multiplier was selected.

3           Q.     But specifically because in part of  
4     Summit's business considerations of wanting to keep  
5     the storage facility as small as possible for the  
6     amount of CO<sub>2</sub> they want to inject; right?

7           A.     I wouldn't say it's as small as possible.  
8     There's just some consideration to not overestimate  
9     the area needed.

10          Q.     Because if they reduce the size or the  
11     boundary of that storage facility, then if there  
12     are people just on the other side of that, they  
13     don't need to pay for any property rights for that;  
14     is that accurate?

15          A.     Can you repeat that?

16          Q.     If they reduce the geographic areal extent  
17     of the storage facility boundary, it reduces the  
18     number of landowners for whom they need to  
19     compensate for the use of the property rights and  
20     that's the business consideration; right?

21          A.     It's a fact a smaller storage facility  
22     area would result in less landowners having to be  
23     permitted. The -- the business consideration  
24     wasn't related to number of landowners as it was  
25     area.

1           Q.     What business interest does Summit have in  
2     reducing the size or boundary of that storage  
3     facility if it's not related to not having to  
4     compensate landowners?

5           A.     I --

6           MR. BENDER:   If you know the answer.

7           MS. DOUGLAS:   I don't know that.  I'd have  
8     to defer to Summit.

9           Q.     (MR. BRAATEN CONTINUING)  And so the  
10    compensation of landowners is the only thing you  
11    know of as a business consideration that they would  
12    have been thinking about in --

13          MR. BENDER:   I think that's a  
14    mischaracterization of her testimony.  Can you ask  
15    the question again?

16          Q.     (MR. BRAATEN CONTINUING)  Sure.  You've  
17    testified to the business consideration of the need  
18    to lease landowners; right?

19          A.     Yes.

20          Q.     And that's the only business consideration  
21    that you've testified to related to Summit's  
22    consideration of which permeability adjustment  
23    factor to use?

24          A.     Yes, but it's not the only business  
25    consideration.  There's also operational costs

1 associated with monitoring. If they -- they use a  
2 permeability multiplier in a larger permeability  
3 multiplier as we discussed, it may result in a  
4 larger plume, likely a larger associated pressure  
5 front, larger AOR that would require additional  
6 acreage to monitor, meaning additional monitoring  
7 costs.

8 Q. And every five years or so Summit is going  
9 to rerun the models based on the data acquired thus  
10 far from that monitoring; right?

11 A. Yeah. So the regulations require a  
12 reevaluation of the AOR determination, no less than  
13 every five years, meaning that Summit will be using  
14 operational and monitoring data to history match,  
15 calibrate their models and confirm their permitted  
16 AOR and storage facility area are still sufficient.

17 Q. What if they found out it wasn't?

18 A. So the North Dakota Century Code  
19 43-05-01-12 --

20 MR. BENDER: Let me -- let me correct you.  
21 That's the Administrative Code.

22 MS. DOUGLAS: Thank you for that  
23 correction.

24 Q. (MR. BRAATEN CONTINUING) 43-05-01, and  
25 what was the next one?

1           A.     12.     Dash 12.

2           Q.     Okay.

3           A.     Okay.   This contains the -- the regulation  
4     language regarding any changes to the storage  
5     facility area on that reevaluation.   If it was  
6     deemed that the CO<sub>2</sub> would potentially go outside the  
7     boundaries and Summit determined they needed to  
8     expand the area, they would need to go through the  
9     modification process.

10          Q.     And the result being potentially an  
11     adjustment to the boundaries of the storage  
12     facility?

13          A.     That would require a major modification  
14     which I believe requires an additional hearing at  
15     that point if they needed to modify the permitted  
16     boundaries.

17          Q.     But if the data indicated that the storage  
18     facility boundary had not been modeled in a way  
19     that was accurately reflecting the conditions in  
20     the last five years, that is a potential result of  
21     the five-year review, that you redraw the storage  
22     facility boundary; right?

23          A.     Potentially.

24          Q.     And if you did that, what do you do about  
25     all the payments you've made to the landowners so

1 far?

2 A. I can't speak to that.

3 Q. Is there any process you're aware of that  
4 would address that?

5 A. Again, I believe it would be addressed in  
6 that major modification proceedance, which would be  
7 a hearing just like the one we're in today.

8 Q. Were there any communications about using  
9 the 2.5 multiplier between EERC and the Industrial  
10 Commission?

11 A. I can't recall specifically. Potentially  
12 in their review of initial permit drafts submitted,  
13 it could have been discussed.

14 Q. If you had used 2.7 for the factor instead  
15 of 2.5, how many more acres of property would have  
16 been included in the storage facility?

17 A. I can't speak to that. We did not run  
18 that case.

19 Q. Okay. Do you have any sense of what that  
20 might be?

21 A. I do not because simulations are a  
22 complex, multi-physics approach, and so adjusting  
23 the permeability is not a straight ratio to plume  
24 size.

25 Q. Would you agree that it would result in

1       some additional acreage?

2           A.     Yes, I believe I stated that.

3           Q.     Just a couple minutes ago you made a  
4       reference to sensitivity analysis. Do you recall  
5       that?

6           A.     Yes.

7           Q.     What do you mean by "sensitivity  
8       analysis"?

9           A.     So the EERC performs sensitivity analysis.  
10       Some of that is discussed in -- in the permit as  
11       well. We looked at parameters that affectively --  
12       or could affect simulation results. In addition to  
13       that, to the sensitivity analysis, we also did  
14       uncertainty analysis to look at how various  
15       properties and distribution of properties, such as  
16       permeability, could potentially impact the -- the  
17       model and the simulation results.

18          Q.     And that's essentially doing quality  
19       control to test the predictive utility of your  
20       model?

21          A.     I wouldn't classify it as testing the  
22       utility of our model. We did those things to  
23       determine what parameters we thought were  
24       appropriate and justifiable for use in the model.

25          Q.     Could you do that assessment of the

1 parameters chosen without running sensitivity  
2 analysis on the model?

3 A. Could you repeat that?

4 Q. Could you assess the propriety of the  
5 parameters used in the model without running any  
6 sensitivity analysis on it? Let me ask a different  
7 question.

8 What properties did you run sensitivity  
9 analysis on?

10 A. Sensitivity analysis, you said?

11 Q. Yep.

12 A. So we ran sensitivity analysis on  
13 injection rates, bottomhole pressure conditions,  
14 wellhead temperatures, wellhead pressures.

15 Q. For what purpose?

16 A. So on page 3-15, we have a paragraph  
17 talking about sensitivity analysis.

18 Q. And you indicate that because of the  
19 availability of data in the form of well logs, core  
20 sample data and rock fluid properties, the need for  
21 typical sensitivity studies of influential  
22 reservoir parameters has been reduced. Has it been  
23 eliminated?

24 A. No, which is why we ran a sensitivity  
25 analysis.

1           Q.     What's the difference between the  
2     sensitivity analysis you ran and what you would  
3     refer to here as typical sensitivity studies?

4           A.     Typical sensitivity studies would vary  
5     more parameters potentially. So we felt confident  
6     in site-specific data to define limits of certain  
7     variables so we didn't need to test those.

8           Q.     Up until you ran the injection test?

9           A.     I -- I don't understand the question.

10          Q.     Well, what were the parameters you were  
11     comfortable with that you didn't need to run  
12     sensitivity analysis on?

13          A.     Things like model size, grid cell size,  
14     boundary conditions. We ran certainty cases on  
15     property distribution. We didn't necessarily run  
16     sensitivity cases on property distribution.

17          Q.     Would you have been confident using your  
18     model to develop this application for Summit with  
19     running zero sensitivity analysis?

20          A.     I think it points back to your questions  
21     earlier where you asked about what is the intent of  
22     running these models to define the storage facility  
23     area in an area of review taking into consideration  
24     the required five-year reevaluation, the amount of  
25     CO<sub>2</sub> that would be injected in -- in that time. I

1 believe running a model without sensitivity  
2 analysis would -- would still provide enough  
3 insight to be able to safely inject for those -- at  
4 least those five years until the reevaluation time  
5 period.

6 Q. So you're comfortable with a larger margin  
7 of error in the first five years?

8 A. Given the amount of CO<sub>2</sub> that will be  
9 injected, the proposed CO<sub>2</sub> plume size, other  
10 variables such as the area of review evaluation  
11 that looked at proximity of legacy wellbores and  
12 things like that, given the testing and monitoring  
13 plan, yes.

14 Q. Because ultimately what we're talking  
15 about here are pressures and the extent of the  
16 plume, and given what's going to be injected in the  
17 first five years, you don't have those same safety  
18 concerns in those first five years; would that be  
19 fair?

20 A. Could you restate that?

21 Q. You're comfortable with a greater margin  
22 of error in the first five years; right?

23 A. Given the amount of CO<sub>2</sub> that would be  
24 injected, that's -- that's correct, because  
25 we're -- the model as a whole was used to define a

1 boundary which is for 20 years of injection plus a  
2 period of postinjection plus a buffer. So within  
3 that five years, we're talking about a much smaller  
4 area.

5 Q. And if it's not exact, it's not going to  
6 be problematic because you're not going to have  
7 injected enough to get out to that boundary by that  
8 time anyway?

9 A. That's my belief. Correct.

10 Q. Except that you're treating all of the  
11 landowners inside that boundary exactly the same  
12 with the first ton that goes down that well and  
13 everyone on the outside of that line exactly the  
14 same, meaning they get nothing; right?

15 MR. BENDER: If -- if you understand how  
16 the allocation formula works for paying royalties,  
17 you can answer the question, but if you don't, I  
18 would not -- I would not answer it if I were you.

19 MS. DOUGLAS: Could you restate your  
20 question?

21 MR. BRAATEN: I can't even remember. May  
22 I have you read it back, please?

23 (Record read as requested.)

24 Q. (MR. BRAATEN CONTINUING) With respect to  
25 compensation.

1           A.     I guess I don't understand your question.  
2     If the CO<sub>2</sub>'s still in the boundaries, you're in  
3     compliance with your permit and you're compensating  
4     those within the boundary.

5           Q.     Regardless of where that CO<sub>2</sub> is actually?

6           A.     I guess to Mr. Bender's point, I'm not  
7     comfortable talking on the compensation rates for  
8     landowners or how that's going to be distributed  
9     across owners within the area.

10          Q.     And so to the extent you ran sensitivity  
11     analysis on the model and to the extent you're  
12     comfortable with the predictive utility of the  
13     model in the ways that you used it for this  
14     application, it was never a consideration to you  
15     how that would affect how landowners get  
16     compensated?

17          A.     This modeling and simulation was done to  
18     define the boundaries. Summit made decisions  
19     related to compensation of pore space owners.

20                 HEARING EXAMINER GARNER:   Why don't we  
21     take a ten-minute break.

22                 (Recessed at 10:00 a.m. and reconvened at  
23     10:12 a.m.)

24                 HEARING EXAMINER GARNER:   We are back on  
25     the record. Mr. Braaten, you can resume your

1       questioning.

2           Q.     (MR. BRAATEN CONTINUING)   You had  
3       mentioned that the Industrial Commission had  
4       previously accepted the use of a 2.5 factor.   Was  
5       that for the Project Tundra project?

6           A.     For those permits, correct.

7           Q.     And was the EERC similarly involved with  
8       developing those applications?

9           A.     We were involved, but they had -- we were  
10      involved.

11          Q.     Did someone from EERC make that  
12      determination in the prior case?   That was a bad  
13      question.   Let me ask it again.

14                 Did someone from EERC make the  
15      determination to use the 2.5 permeability  
16      adjustment factor in the prior proceedings related  
17      to Project Tundra in which EERC was involved?

18          A.     I can say we participated in those  
19      discussions.   I can't provide more details on who  
20      made the determination and the parties involved as  
21      that project is -- is still actively being  
22      conducted and is governed by an NDA with Minnkota.

23          Q.     If you were going to assess someone else's  
24      work developing the same models that EERC developed  
25      for Summit's application, how would you go about

1     assessing those models that were developed by  
2     others?

3             MR. BENDER:   Do you understand what he's  
4     talking about when he says "assess"?

5             MS. DOUGLAS:   I was just going to ask,  
6     assessing for what purposes?

7             Q.     (MR. BRAATEN CONTINUING)   If you were  
8     asked to determine if the inputs and parameters and  
9     ways in which the models were set up and run would  
10    be acceptable to you in your professional  
11    experience such that they would support an  
12    application for Class VI wells.

13            A.     The EERC's been contracted in this  
14    capacity before, so I'm speaking from direct  
15    experience here.   Typically, that review process  
16    would come in the form of presentations about  
17    inputs and assumptions used in the model by those  
18    that created the model.   We would evaluate their  
19    inputs and assumptions for reasonability and if  
20    they're justifiable based on the data sets that  
21    they had available to them, and we'd take into  
22    considerations Class VI requirements related to  
23    compliance.   But EERC has not in these roles --  
24    where we've been contracted to perform this work  
25    before, we have not reviewed people's models or

1 rerun their simulations to -- to double-check  
2 things in that manner. We've reviewed their inputs  
3 and assumptions through presentations, reviews of  
4 reports, that type of thing.

5 Q. Presentations by whom?

6 A. As I mentioned, those that generated the  
7 models presented to us their inputs and  
8 assumptions. A lot of the information that would  
9 have been in those presentations is captured -- for  
10 our models that information is similarly captured  
11 in the storage facility permits.

12 Q. Did you run the model at a 2.7 adjustment  
13 factor for permeability?

14 A. I just previously mentioned earlier today  
15 that we did not.

16 Q. Why not?

17 A. We didn't feel it was necessary. We made  
18 a decision to run it with 2.5 and so we ran it with  
19 2.5.

20 Q. Would it have cost you anything to run it  
21 at 2.7?

22 A. Yes, it would have cost us time, so --

23 Q. How much time?

24 A. -- hours, and it would have cost us time  
25 running it with the model license. So we only

1     have -- we pay for a model license for a month.  
2     Running the model would tie up that license for a  
3     week or so.

4           Q.     Because that's how long it takes to run  
5     the model?

6           A.     A model this size typically could be  
7     anywhere from two days to a week of run time,  
8     depending on if any errors are encountered and you  
9     have to restart the model.

10          Q.     Meaning that if you had to restart the  
11     model, it could take up to a week?

12          A.     Potentially.

13          Q.     Could it take longer than a week?

14          A.     Potentially, if there are model errors  
15     which can't be necessarily predicted when the  
16     simulator is going to experience a numerical error  
17     and give an error file.

18          Q.     But you think an engineer could replicate  
19     it in four weeks?

20          A.     You asked me how much time it would take  
21     to -- to build a model and I said four weeks to  
22     build the model. That's different than running the  
23     simulations.

24          Q.     Okay. So several weeks to replicate the  
25     model and then at least another week to run it?

1           A.     Correct.

2           Q.     So it's your testimony that another  
3 engineer could both replicate and run that model in  
4 five weeks?

5           A.     If the model they built ran and didn't  
6 experience any numerical errors that they would  
7 have to troubleshoot.

8           Q.     Have you ever set up and run a model that  
9 didn't have any numerical errors that had to be  
10 troubleshooted?

11          A.     Myself personally, no.

12          Q.     There's a binder directly in front of you  
13 there with a number of tabbed exhibits. If you  
14 don't mind, can I have you open it to landowner --  
15 or LO-63.

16          A.     I'm there.

17          Q.     Are there features on this map that you  
18 recognize from the shapefiles submitted by Summit  
19 to the DMR?

20          A.     These appear to be the storage facility  
21 boundaries and the AOR for the three permits.

22          Q.     Are you also familiar with the maps that  
23 were produced to indicate the 5-, 10- and 20-year  
24 pressure increases in the area of the injectors?

25          A.     Yes, I'm familiar with those.

1           Q.    And does it appear that one of those is  
2           also overlaid on this exhibit?

3           A.    It does appear that way, but it's  
4           difficult to see given the color scale for that  
5           layer.

6           Q.    You are familiar with the maps that were  
7           generated to indicate the areal extent of the  
8           pressure increases in the reservoir that were in  
9           the application; right?

10          A.    I am.

11          Q.    And so you'd agree that there will be  
12          increases in the pressure in the formation well  
13          outside the boundaries of the storage facility?

14          A.    Yes.  If we may, I'd like to speak off  
15          page 4-2 of the permit.

16          Q.    Okay.

17          A.    Figure 4-1.

18          Q.    And just for the record, the permit being  
19          referenced is Exhibit 1A?

20          A.    Correct.  So this map is showing the  
21          predicted maximum subsurface pressure due to  
22          injection from the three sites.  So this is at  
23          20 years is where -- of injection is where we see  
24          the maximum.  And as you can see, the pressure  
25          increase extends beyond the proposed facility

1 boundaries in the area of review.

2 Q. What variable of Darcy's law limits the  
3 amount and rate at which you can inject CO<sub>2</sub>?

4 A. I don't think I could speak to that  
5 without the equation in front of me.

6 Q. What limits your ability to inject CO<sub>2</sub> into  
7 these Class VI wells? Let me ask that again.

8 What limits the rate and amount of CO<sub>2</sub> that  
9 you can inject into that reservoir through these  
10 Class VI wells?

11 A. So the bottomhole pressure constraint is  
12 the -- the regulatory constraint that dictates the  
13 amount of CO<sub>2</sub> that can be injected into these wells.  
14 So that bottomhole pressure constraint is derived  
15 as 90 percent of the fracture pressure gradient.  
16 So bottomhole pressure is the regulatory constraint  
17 for the Class VI.

18 Q. And the bottomhole pressure is obviously  
19 directly impacted by existing pressures in the  
20 formation; right?

21 A. That's correct.

22 Q. Are you familiar with the intervention by  
23 Minnkota in this proceeding?

24 A. Generally.

25 Q. Are you familiar with where the well is

1       that they had concerns about?

2           A.     Yes.

3           Q.     Is Summit's project going to affect the  
4       ultimate bottomhole pressure that limits Minnkota's  
5       project?

6           A.     There will be pressure interference.

7           Q.     Can I have you go back to Exhibit LO-63?

8           A.     I'm there.

9           Q.     Do you see in the legend there there's a  
10      number of different colors, and I'll agree with you  
11      the color scale's a bit off, but down near the  
12      bottom next to Swenson there's a white color. Do  
13      you see that?

14          A.     Yep.

15          Q.     Do you see the land that sits right in  
16      between the areas of review of the three different  
17      storage facilities?

18          A.     Yes.

19          Q.     Is there going to be pressure interference  
20      with Mr. Swenson's lands and pore space?

21          A.     Define "pressure interference with."

22          Q.     From the Class VI injectors that Summit is  
23      going to inject CO<sub>2</sub> into.

24          A.     There will be a pressure increase in the  
25      reservoir due to injection. The map does show the

1 pressure increase will be in the pore space below  
2 that land.

3 Q. Which would similarly limit the ability to  
4 inject into the pore space in that part of the  
5 reservoir based on limits to bottomhole pressure  
6 that are being affected by that pressure  
7 interference by Summit's Class VI wells?

8 A. Yes, potentially.

9 Q. How much is Summit compensating for that?

10 A. They're not required to compensate based  
11 on North Dakota Class VI laws. They're required to  
12 compensate for use of pore space for CO<sub>2</sub> storage.  
13 Injection will cause pressure increase.

14 Q. Which reduces the availability of pore  
15 space for storage of substances?

16 A. No. The pore space is still there. It's  
17 not taking the pore space away.

18 Q. It reduces the availability of the pore  
19 space for the storage of substances?

20 A. I don't agree with that characterization.

21 Q. Why not?

22 A. An operator could come in and still  
23 develop that and store CO<sub>2</sub> in that pore space.

24 Q. Subject to a bottomhole pressure  
25 limitation that has been significantly impacted by

1 the three Class VI wells surrounding him; right?

2 A. For the amount. Bottomhole pressure might  
3 impact potential injection rates, not necessarily  
4 the volumes that could be stored there. So one  
5 thing to note that while injection operations will  
6 increase pressure, when injection stops or if  
7 injection rates are limited, after injection stops  
8 pressure will die off in the reservoir, and we have  
9 a map that demonstrates that.

10 During operations, you know, if Summit's  
11 injecting at a lower rate, there will be a lower  
12 pressure increase. It could also, you know, shut  
13 in wells which would result -- or decrease -- which  
14 would result in additional pressure decreasing  
15 there. The pressure increase is temporary, but a  
16 developer could come in and still inject CO<sub>2</sub> there.

17 Q. And you show equilibrium of pressures ten  
18 years after operations; right?

19 A. The permit has a map that demonstrates  
20 this pressure decrease. It doesn't represent  
21 pressure equilibrium.

22 Q. What would you project that to be in time  
23 from the end of operations?

24 A. We did not simulate that.

25 Q. Would you expect it to be more than

1 20 years?

2 A. We'd have to simulate that.

3 Q. Significant pressure interference for at  
4 least 30 years of Mr. Swenson's pore space caused  
5 by the Summit project?

6 A. Again, it would limit injection rates. It  
7 wouldn't limit the total volumes that could be  
8 stored on his land. So to answer your question,  
9 there would be a pressure increase of approximately  
10 500 psi up to a thousand psi increase over the  
11 current pressure of the Broom Creek today for up to  
12 30 years.

13 Q. What's the economic incentive for  
14 injecting CO<sub>2</sub> into the pore space?

15 A. Can you clarify that question?

16 Q. Is Summit being paid in the form of tax  
17 credits by the federal government to inject CO<sub>2</sub> in  
18 the pore space?

19 A. I believe Wade testified yesterday as to  
20 the -- the economic drivers behind their project.  
21 I can't answer questions on that.

22 Q. Will the 45Q credits be in place in the  
23 same form and amount 30 years from now?

24 MR. BENDER: Objection. Calls for  
25 speculation.

1 HEARING EXAMINER GARNER: Overruled.

2 MS. DOUGLAS: As written today?

3 Q. (MR. BRAATEN CONTINUING) Correct.

4 A. No. But as I mentioned, while Summit's  
5 operating, there's nothing that would preclude an  
6 operator from coming in and injecting to store CO<sub>2</sub>.  
7 The same amount of pore space would still exist.  
8 They would just have to inject at lower injection  
9 rates, but they could still get the same amount of  
10 CO<sub>2</sub> in that pore space over time.

11 Q. How much longer amount of time?

12 A. We have not run that model.

13 MR. BRAATEN: Real quick, I apologize, on  
14 the prior exhibit, LO-83, I did not move to admit,  
15 and I would move to admit LO-83.

16 MR. BENDER: Did you say 83 or 63?

17 MR. BRAATEN: 83.

18 MR. BENDER: Oh, that one. I'm sorry.

19 MR. BRAATEN: I'm skipping back.

20 HEARING EXAMINER GARNER: Any objections?

21 MR. BENDER: No objection.

22 HEARING EXAMINER GARNER: The exhibit is  
23 admitted.

24 Q. (MR. BRAATEN CONTINUING) You talked  
25 yesterday briefly about the area of review and

1       corrective action. Did you look at the old wells  
2       that have been P and A'd around the area of the  
3       storage facilities?

4           A.     (BY MS. OLSEN) We did.

5           Q.     What did you look at in those wells?

6           A.     Particular to this permit, there are no  
7       legacy wells in this area.

8           Q.     Within the area of review?

9           A.     Within the area of review for the TB  
10       Leingang, that's correct.

11          Q.     Did you look at the legacy wells that are  
12       closest but not within your area of review?

13          A.     We did not evaluate wells outside of the  
14       area of review.

15          Q.     Okay. Are you aware of the Fritz-Lutz 1  
16       well?

17          A.     I don't believe that was in the area of  
18       review.

19          Q.     Are you aware of where it is in relation  
20       to the area of review?

21          A.     Which area of review?

22          Q.     Any of them.

23          A.     Not at this moment.

24          Q.     And are you familiar with the Richter 1  
25       well?

1           A.     I recall the Richter 1 well.

2           Q.     Did you assess that well in any way as  
3 part of your work on the Summit project?

4           A.     No.   Class VI rules only require  
5 evaluation of wells within the area of review.

6           Q.     Can I have you turn to Figure 4-1, the  
7 pressure map we were taking a look at a moment ago.

8           A.     (BY MS. DOUGLAS)   We're there.

9           Q.     Are the dots on this pressure map  
10 indicative of wells?

11          A.     Yes.

12          Q.     Are you generally familiar with the two  
13 wells I mentioned being to the southwest of the  
14 storage facility represented on this map?   Sorry.  
15 I don't know who I'm talking to.   Either of you who  
16 knows.

17          A.     Not based on the current map.   They're not  
18 labeled or have well names, so I can't identify  
19 them based on this map.

20          Q.     And just based on your familiarity with  
21 your location, does it appear that the -- let me  
22 ask a different question.

23                 Based on your familiarity with the Richter  
24 1 well, is it your understanding that that well is  
25 generally to the south or southwest of the storage

1 facilities?

2 A. (BY MS. OLSEN) I don't recall that  
3 information, but if you say it is.

4 Q. So if we look directly south from the SCS1  
5 injection wells that is indicated on the map with  
6 the green triangle, if you go south of that until  
7 you're outside of the area of review and storage  
8 facility boundaries, almost directly south in blue  
9 there is a dot and it is a dot directly south of  
10 the green triangle and within the area that I  
11 believe is indicated as a 400 psi pressure  
12 differential. Do you see where I'm pointing at  
13 that?

14 A. I do.

15 Q. Does that well have surface casing below  
16 the depth of the uppermost freshwater aquifer or  
17 U.S. drinking water aquifer?

18 A. I don't have that information in front of  
19 me.

20 Q. Have you assessed the integrity of the  
21 plugs on that well?

22 A. For this permit, only wells within the  
23 area of review are required to be assessed.

24 Q. I understand. But as a factual matter  
25 regardless of a requirement, did you assess the

1 integrity of the plugs on that well?

2 A. I did not.

3 Q. And did EERC assess that?

4 A. I don't recall.

5 Q. Do you know if Summit assessed that?

6 A. I don't know.

7 Q. You'd agree that the reservoir pressures  
8 in the area of that well are going to increase by  
9 400 psi based on your modeling as indicated on this  
10 map at Figure 4-1?

11 A. That's correct.

12 Q. Did you run an MIT on the well?

13 A. We did not. I assume the well is plugged.

14 Q. When was it plugged?

15 A. I don't know. Most of the wells in this  
16 area are vintage and drilled in the '70s. That's  
17 my assumption.

18 Q. Or even earlier?

19 A. Sure.

20 Q. Some of them plugged before the 1950s  
21 even?

22 A. Perhaps.

23 Q. So plug job that's 70 years old now?

24 A. Seven years?

25 Q. 70.

1           A.     Perhaps.

2           Q.     And it was plugged before we had the oil  
3     and gas conservation laws on the books in North  
4     Dakota we have now?

5           A.     Plugging rules were different, yep.

6           Q.     How much time and expense would be  
7     required to pressure up an MIT and run it at 400  
8     psi on that well?

9           A.     (BY MS. DOUGLAS)   That -- that well's  
10    abandoned and so it's -- it's not accessible at the  
11    surface.   You'd have to redrill out the plugs and  
12    recomplete it to get any information out of it.

13          Q.     Was there an assessment of whether that  
14    might need to be replugged?

15          A.     No.   Again, Caitlin's testified and stated  
16    here a couple times we're only required to evaluate  
17    the wells in our AOR.

18                 I would like to say -- point out, we did  
19    look at potential leakage or ribbing of leakage in  
20    that well.   So if I could direct you to page 3-41  
21    to map -- to the map in Figure 3-2.   So we modeled  
22    a case here assuming hypothetical leakage pathways,  
23    again, hypothetical leakage pathways, meaning that  
24    there's a leakage pathway through plugs for this  
25    model.   If there was a leakage pathway due to the

1 pressure increase -- maximum pressure increase from  
2 injection, we're estimating over the life of the  
3 project only .005 meters cubed of formation fluid  
4 could leak up through that well, again assuming  
5 it's leaking, into overlying formations.

6 So, again, we have not evaluated that  
7 particular well. It's outside of our AOR. We  
8 don't believe that there is endangerment of USDWs  
9 due to leakage.

10 Q. But if the plugs were bad, your modeling  
11 indicates that fluids from the formation would  
12 travel up that well in some amount to the  
13 freshwater drinking aquifer that is not protected  
14 by a surface casing?

15 A. The Broom Creek as it sits today is  
16 overpressurized. If those plugs were bad because  
17 the Broom Creek is overpressurized, fluids would  
18 already be flowing.

19 Q. How much psi would it take to bust those  
20 plugs?

21 A. I don't have that calculation.

22 Q. So you don't know if the pressure  
23 formation would cause those plugs to burst right  
24 now?

25 A. (BY MS. OLSEN) Class G cement is

1 typically rated to 5,000 psi.

2 Q. Is that what they used in 1945?

3 A. I'd have to look at the plugging records  
4 to look at that specific well.

5 Q. Do they have plugging records?

6 A. I don't know.

7 Q. Do you have any familiarity with how wells  
8 were plugged in North Dakota in the 1940s?

9 A. Generally, yes.

10 Q. Based on what?

11 A. My experience working for the Department  
12 of Mineral Resources.

13 Q. If you put a Class VI injector on the  
14 Swenson land and ran it at the same rates and  
15 volumes that Summit is going to run its wells,  
16 would that have any impact on Summit's project?

17 A. (BY MS. DOUGLAS) Yes, potentially.

18 Q. Do you think Mr. Swenson could get a Class  
19 II disposal well into the Broom Creek Formation  
20 permitted on his land in between the three Class VI  
21 injectors?

22 A. So my understanding is that the -- the  
23 Commission -- and I might not be using the proper  
24 terms -- but if they grant this permit, they will  
25 define this as a field, and so my understanding is

1 Mr. Swenson could permit the Class II or a Class VI  
2 well on his land. He would have to work with the  
3 Commission and make sure that he abides by any  
4 Commission orders related to those field rights.

5 Q. Given your knowledge of the technical  
6 feasibility of that, do you think the Commission's  
7 going to grant that permit?

8 A. I think development of any subsurface  
9 resources in the state require the cooperation of  
10 many entities, including landowners and project  
11 developers.

12 Q. How is Summit cooperating with Mr. Swenson  
13 to allow him to develop his pore space subject to  
14 the pressure increases caused by Summit's Class VI  
15 wells?

16 A. Is Mr. Swenson actively trying to develop  
17 those?

18 Q. Do you have the answer to my question?

19 A. I don't have any knowledge of Mr. Swenson  
20 actively trying to develop those.

21 Q. And so if Summit is preventing him from  
22 developing those, what does it matter if he's  
23 actively trying to develop them right now or not?

24 A. Could you clarify how Summit's --

25 Q. Why are you saying it's significant or

1 relevant whether or not Mr. Swenson is actively  
2 trying to develop a Class II well?

3 A. Your question you asked me, I believe --  
4 and it can be repeated back here, but I believe you  
5 asked why is Summit preventing Mr. Swenson from  
6 developing his pore space.

7 Q. Okay. Well, if I asked that, I apologize.  
8 My intended question is has Summit worked with  
9 Mr. Swenson or reached out or talked to him about  
10 how their operations are going to affect his  
11 ability to use his pore space?

12 A. I was not privy to the discussions between  
13 Summit and Mr. Swenson.

14 Q. Would you agree there's going to be about  
15 a 900 psi pressure increase in the pore space in  
16 the reservoir under Mr. Swenson's land?

17 A. Approximately, yes.

18 Q. Is the max bottomhole pressure about  
19 3,000, 3,500? What's the max bottomhole pressure  
20 on the BK Fischer?

21 A. It's on the range of, yeah, 3,600 psi to  
22 3,800 psi, depending on what site-specific data --

23 Q. So you're going to increase the pressure  
24 in his pore space by approximately 25 percent of  
25 the max bottomhole pressure?

1           A.     I've not done the specific calculations,  
2     but if you're saying that's what it is --

3           Q.     Is 900 approximately one-fourth of 3600?

4           A.     Yep.

5           Q.     There was testimony yesterday about the  
6     delineation of the CO<sub>2</sub> plume boundary, and I believe  
7     the testimony was that it was determined to be at a  
8     5 percent concentration of CO<sub>2</sub> in the aquifer as the  
9     edge of the CO<sub>2</sub> plume; is that right?

10          A.     That's correct.

11          Q.     And can you tell me again why 5 percent?

12          A.     Yes.   So there's several studies out there  
13     that suggest that 5 percent is the detection limit  
14     for monitoring techniques, particularly 3D seismic.

15          Q.     Would it be fair and accurate to say that  
16     at the bottom of the injector, bottomhole, you've  
17     got about a hundred percent CO<sub>2</sub> in the formation,  
18     would that be fair, during injections?

19          A.     Right -- right at the injection well?

20          Q.     Right.   I'm just saying if you start  
21     aground like right at -- where you're injecting, we  
22     can make an assumption that the CO<sub>2</sub> is a hundred  
23     percent of the fluid right there; right?   Within  
24     one inch of the bottom of the well -- actually, let  
25     me ask you something.   Are they perforating the

1 well?

2 A. They will be perforating the well.

3 Q. Okay.

4 A. Or -- yes, they will be perforating the  
5 well.

6 Q. Is there going to be a lateral?

7 A. No.

8 Q. Okay. So within the wellbore we're at a  
9 hundred percent CO<sub>2</sub>?

10 A. Correct.

11 Q. And you're indicating the edge of the  
12 plume is 5 percent CO<sub>2</sub>?

13 A. Correct.

14 Q. Does the concentration of CO<sub>2</sub> become more  
15 diluted in a linear manner as you move away from  
16 the wellbore?

17 A. No, not necessarily. I'd like to point  
18 you to page 3-25 and 3-26.

19 Q. Okay.

20 A. So these are showing cross-sections  
21 through the simulated plume. These are  
22 representing the gas saturation in the model cells.  
23 So saturation of CO<sub>2</sub> is also dictated by the  
24 porosity and permeability of the rock, so you'll  
25 note -- so, again, this has the 5 percent

1 saturation cutoff. You'll note along the wellbore  
2 you see an area of white, so this is on Figure  
3 3-15a. Even at the wellbore saturation is below  
4 5 percent due to the porosity and permeability in  
5 that model layer.

6 So it's -- it's dependent on porosity and  
7 permeability and how the CO<sub>2</sub> would flow in the  
8 formation.

9 And just a point of clarification,  
10 saturation will never be a hundred percent. CO<sub>2</sub>  
11 injection can never move all of the formation fluid  
12 out of -- out of the rock.

13 Q. Okay. Thank you. If we held constant  
14 permeability and porosity, would the CO<sub>2</sub> become more  
15 diluted in a linear or logarithmic function as you  
16 move away from the wellbore?

17 A. Not directly linear or logarithmic, but  
18 generally it would. At the edges of the plume is  
19 where you see more mixing of CO<sub>2</sub> with -- with brine.

20 Q. So, generally speaking, if we were to plot  
21 the reduction in CO<sub>2</sub> concentration on a linear scale  
22 out to 1 percent, and let's pretend we can measure,  
23 would the area of that line representing 6 percent  
24 to 1 percent be much longer than the rest of the  
25 line?

1           A.     Based on the volumes being simulated here,  
2     no, it would be much, much smaller because you'd  
3     have a larger area with higher saturation.

4           Q.     Would the area over which the saturation  
5     changes from 10 percent to 0 percent be  
6     significantly longer than the area over which it  
7     changes from 20 percent to 10 percent?

8           A.     I can't really make an educated guess on  
9     that --

10          Q.     What would you expect?

11          A.     -- at this time.

12          Q.     Would you expect that area from 10 to  
13     0 percent to take longer or be longer than the area  
14     from 10 to -- or 20 to 10 percent based on what you  
15     know about how it dilutes as it moves away from the  
16     wellbore as an engineer?

17          A.     Again, I don't think I could -- could  
18     speak on that.

19          Q.     Okay. And the 5 percent, again, though,  
20     was chosen because that's essentially the detection  
21     limit and that's the lowest limit you can detect  
22     with running the models? Sorry. Let me start  
23     over.

24                     The 5 percent is used because that is the  
25     detection limit from the seismic?

1           A.     Correct. Based on published studies --

2           Q.     Okay.

3           A.     -- from other carbon capture and storage  
4 sites that are in operation.

5           Q.     But you agree that's not actually the  
6 border or the edge of where the actual CO<sub>2</sub> being  
7 injected is traveling to?

8           A.     As discussed, it's the boundary we can  
9 detect.

10          Q.     How?

11          A.     With seismic.

12          Q.     But only to a 5 percent concentration of  
13 CO<sub>2</sub>; right?

14          A.     Yep.

15          Q.     So we know that there is CO<sub>2</sub> outside of  
16 that boundary if that boundary is set at 5 percent.  
17 It sure doesn't go from 5 percent to 0 within a  
18 millimeter; right?

19          A.     There's the potential for CO<sub>2</sub> to be --

20          Q.     It's not just potential. Just as a matter  
21 of physics, there's obviously CO<sub>2</sub> outside of that  
22 boundary; right?

23          A.     Yeah.

24          Q.     Is there a plan to put two different  
25 wellbores in at each injector site?

1           A.     That's my understanding.

2           Q.     Is the intent to do any kind of  
3     directional drilling with the wellbores?

4           A.     I believe so, but I can defer questions of  
5     that to a witness who can answer in more detail.

6           Q.     Okay. Did someone generate a PHI-H map  
7     for the reservoir in the area -- areas of review?

8           A.     I don't believe one was provided in the  
9     permit and I'm not sure if one was produced.

10          Q.     Would the -- would EERC have produced the  
11     PHI-H map if one was produced?

12          A.     Yes.

13          Q.     Can I have you look at Figure 3-1?

14          A.     I'm there.

15          Q.     It says the distributed PHIE property  
16     along a roughly west-east cross-section. It seems  
17     obvious, but I want to make sure I understand. The  
18     little callout in the upper left with the red line,  
19     does that indicate the cross-section?

20          A.     That does. The red line's the path of the  
21     cross-section.

22          Q.     Okay. Do you see the vertical line for  
23     the Archie Erickson 2?

24          A.     I do.

25          Q.     And do you see just to the left of that

1       there's a couple areas with some fairly significant  
2       pockets of red, I'll call them?

3           A.     Yep.

4           Q.     And then if we look over at the Milton  
5       Flemmer, just to the right of that there's an area  
6       that is mostly blue and green with just a little  
7       yellow. Do you see where that is?

8           A.     I do.

9           Q.     If we took a hundred-foot diameter core in  
10      that area with the red splotches just to the left  
11      of the Archie Erickson and then we took a  
12      hundred-foot diameter core in that area with the  
13      blue and green just to the right of the Milton  
14      Flemmer, would one of those cores contain more  
15      available pore space for the storage of substances  
16      than the other?

17          A.     Yes. If we're -- we're -- in a  
18      hypothetical case if we're assuming that this model  
19      is a hundred percent accurate and represents the  
20      rocks there, where you have higher porosity, you're  
21      going to have more pore space just mathematically.

22          Q.     And there's also a difference -- if we did  
23      that same exercise, there's also a difference in  
24      the amount of pore space available for storage  
25      based on the vertical extent of the formation;

1 right?

2 A. You're saying based on the thickness?

3 Q. Correct.

4 A. Yes. That would be a factor in that  
5 calculation -- sorry. That would be a factor of  
6 the calculation, would be height, if you're  
7 calculating volume.

8 Q. And would a PHI-H map show us  
9 geographically what the various values were, taking  
10 into account the porosity as well as the thickness?

11 A. It would for the realization of the model  
12 in the permit. One thing to understand, while we  
13 use site-specific data as controls, we used  
14 variograms and other means to distribute properties  
15 to the best of our ability. It doesn't mean that  
16 the model will be a hundred percent accurate, which  
17 is why we have that five-year reevaluation period  
18 in case our model -- or the actual subsurface  
19 geology is slightly different than our model, so  
20 that we can account for those differences in how  
21 bottomhole pressure is responding to injection as  
22 well as how the CO<sub>2</sub> plume is migrating in the  
23 reservoir.

24 Q. But if we look at Figure 3-1 in that area  
25 of red just to the left of the Archie Erickson,

1     you're not saying that the model just randomly  
2     allocated an area of higher porosity to that  
3     specific location based on, you know, a factor of  
4     variability. It's doing that because it is  
5     predicting that that actually has more porosity  
6     there in that specific location; right?

7           A.     It's being informed by control points, but  
8     we did uncertainty analysis looking at a hundred  
9     different cases for property distribution -- sorry,  
10    not a hundred -- a thousand different cases for  
11    property distribution. We chose the one P50 case  
12    which we feel is the most likely.

13          Q.     And you couldn't have done that unless you  
14    were able to do sensitivity analysis?

15          A.     Uncertainty analysis.

16          Q.     Sorry.

17          A.     But, yes, that's correct. Those are the  
18    steps we performed to determine which model we had  
19    the highest confidence in being the most probable  
20    case.

21          Q.     And it's important to do that; right?

22          A.     When you're the operator looking to define  
23    the boundaries of your storage facility area, it's  
24    important as you will be obligated to operate and  
25    CO<sub>2</sub> must stay within those bounds.

1           Q.     What if you're the landowner with pore  
2     space on the outside of that boundary, is it  
3     important for them?

4           A.     I don't understand what context it would  
5     be important for them. The operator's required to  
6     keep CO<sub>2</sub> within their boundaries. If CO<sub>2</sub> is going  
7     to go outside their boundaries, they're in  
8     noncompliance with their permit. If they have to  
9     adjust their boundaries, they are going to have to  
10    amalgamate or acquire that additional pore space  
11    outside, go through this major modification and  
12    hearing process to get that approved.

13          Q.     With respect to the compensation being  
14    paid to the landowners whose property is being used  
15    by Summit, is there any consideration given to the  
16    actual porosity or actual thickness of their pore  
17    space?

18          A.     I believe Summit chose to treat all  
19    landowners within the storage facility area  
20    equally, meaning that the compensation is based by  
21    a total amount of CO<sub>2</sub> injected and they're given the  
22    proportional payment for the amount of land they  
23    have within the storage facility area. They did  
24    not use a volumetric approach. So in a volumetric  
25    approach landowners would be paid for the actual

1 amount of CO<sub>2</sub>. Why that's not done is it -- it  
2 would -- it would benefit the landowners directly  
3 around the injection well, so Summit chose to treat  
4 all landowners within the storage facility area  
5 equally instead of --

6 Q. Accurately?

7 A. I don't agree with that classification.

8 Q. Well, they're not paying the landowners  
9 based on the amount of CO<sub>2</sub> being stored in their  
10 pore space; right?

11 A. Summit's paying for the use of the pore  
12 space, so they are leasing the pore space.

13 Q. Are they leasing the pore space from my  
14 clients?

15 A. My understanding is that your clients are  
16 outside of the storage facility area boundary, so  
17 their pore space is not being leased for storage of  
18 CO<sub>2</sub>.

19 Q. Can I have you flip back to Landowner 63.

20 A. I'm there.

21 Q. If you see the different colors next to  
22 the names and you look at the map, there are blocks  
23 of colors both within and without the storage  
24 areas, areas of review and outside of those  
25 boundaries?

1           A.     Yep.

2           Q.     I apologize.  Bear with me one moment.  I  
3 think I may be done.

4                   Is there a place in the permit application  
5 where thickness or porosity is broken down by  
6 landowner or tract?

7           A.     No.

8           Q.     Okay.  Whether it's in the application or  
9 not, was that ever done or attempted by EERC, to  
10 your knowledge?

11          A.     No.

12          Q.     How does it affect the accuracy of your 3D  
13 seismic if you are not doing it on certain tracts?

14          A.     It has the potential to reduce the  
15 resolution and quality of the seismic data.

16          Q.     And does it reduce the resolution and  
17 quality just for that area specifically or does  
18 that lack of seismic in that area impact the  
19 quality of the other data?

20          A.     So the quality of the seismic data is  
21 dependent on the fold as well as the source  
22 receiver offsets, so it's dependent -- the quality  
23 of the image is dependent on the fold within each  
24 area.  Fold is lower when you aren't allowed to  
25 have source and receivers in a specific tract.

1 However, if you have sufficient source receiver  
2 offset, the quality of data will be lesser for  
3 shallower formations, but you would -- depending on  
4 the side of the land where you don't have source  
5 and receivers, you may still have source --  
6 sufficient source and receiver offset to produce  
7 high-quality images with a seismic of the deeper  
8 formations.

9                   Again, that's going to be dependent on the  
10       depth of the reservoir, the source receiver offset  
11       and the area where receivers and source weren't  
12       allowed to be placed or operated.

13 MR. BRAATEN: I don't have any further  
14 questions.

15 HEARING EXAMINER GARNER: Any questions  
16 from the staff?

17 EXAMINATION

18 BY MS. MADCHE:

19 Q. I have some questions. I would like to  
20 start out with some of the questions that were  
21 deferred to this group from earlier. Let's see  
22 here.

23               So you had given testimony on the location  
24       of coal reserves and coal leases within the three  
25       storage facility permits. Would you be able to

1     answer approximately how close mining activity  
2     currently is from proposed equipment, aboveground  
3     infrastructure for the three facilities? So to  
4     repeat, for each three storage facility permits,  
5     what's the proximity to current mining activity to  
6     date from the aboveground surface infrastructure?  
7     And if you need to defer that, that's fine. Just  
8     let me know.

9           A.     (BY MS. DOUGLAS) All right. I'm going to  
10    point you to the Exhibit 2.

11           MR. BENDER: It's 1B.

12           MS. DOUGLAS: 1B. Exhibit 1B, page 280.  
13    This is the Archie Erickson/BK Fischer permit.

14           Q.     (MS. MADCHE CONTINUING) Yep.

15           A.     Figure 2-50. So these reflect the closest  
16    mining operations from the Coyote Creek and Beulah  
17    Mine which are the closest mining operations to any  
18    of the three storage facility areas. And you can  
19    see on this map green shows future mining  
20    activities and brown shows mined out -- or areas  
21    where mining has already taken place. And you can  
22    see the approximate distance from those to the  
23    proposed injection sites as well as the flowlines.  
24    So here the scale we're looking at, I believe those  
25    are townships. So it's approximately three to

1 four miles, the surface facilities are, from the  
2 future mining activities.

3 Q. And just to confirm, yesterday in your  
4 testimony you had stated that there were no active  
5 coal leases where surface infrastructure was  
6 planned for the three facilities; correct?

7 A. Correct.

8 Q. So earlier I had asked a question on why  
9 the Milton Flemmer 1 was used as the type log in  
10 Article 1.15 for all three storage agreements.  
11 Could you elaborate as to why?

12 A. I can. So the Milton Flemmer well  
13 penetrates the entire thickness of the Amsden, so  
14 it was used as the type log so that we could  
15 accurately represent the depth to the top and the  
16 bottom of the Amsden and the thickness. The other  
17 two stratigraphic test wells drilled for the other  
18 storage facility areas do not penetrate the entire  
19 Amsden. That is why the Milton Flemmer 1 well was  
20 used as the type log for all three storage  
21 facilities.

22 Q. When it comes to the royalty payments,  
23 would you agree that due to the lack of history  
24 matching data that we have that there would be more  
25 uncertainties to allocating via volumetric versus

1 the tract participation as Summit has chosen to go  
2 forward with?

3 A. I would agree with that. I'd also add  
4 that there are limitations for using monitoring  
5 methods to quantify the amount of CO<sub>2</sub> in a given  
6 area in the subsurface. Monitoring methods such as  
7 3D seismic and time lapse changes that can be  
8 captured in 3D seismic are susceptible to both  
9 changes in pressure and changes in fluid  
10 saturation, so you would not be able to accurately  
11 separate out effects of pressure from CO<sub>2</sub> saturation  
12 in order to assure you're compensating landowners  
13 using a volumetric approach.

14 Q. So now I'm going to move forward to  
15 questions that I have from Section 2 on the  
16 geologic exhibits. For the storage facility permit  
17 for the TB Leingang, what was the maximum pressure  
18 applied during the microfracture testing in the  
19 Milton Flemmer 1 well within the Spearfish/Opeche  
20 Formation?

21 A. I'll defer that question to a later  
22 witness who was involved in those tests.

23 Q. Would you be able to state who it's being  
24 deferred to specifically?

25 A. Ms. Jean Oddy.

1           Q.     Okay. As it pertains to all three of the  
2     storage facility permits and to their stratigraphic  
3     test wells, can you explain how you determined  
4     which sand package within the Broom Creek you  
5     target for your microfracture in situ stress test  
6     to determine the fracture propagation pressure  
7     gradient?

8           A.     I'll also have to defer that to Ms. Oddy.

9           Q.     Okay. For all three of the applications  
10    and the three stratigraphic test wells, was the  
11    next dissipation zone above the injection zone, so  
12    your Inyan Kara, sampled at all three facilities?

13          A.     I believe so, yes.

14          Q.     And did those samples show evidence that  
15    the formations are currently hydraulically  
16    separated?

17          A.     That's our interpretation of the data,  
18    yes.

19          Q.     And in all three storage facility permits,  
20    has any Fox Hills wells been sampled?

21          A.     (BY MS. OLSEN) There's historical  
22    groundwater sampling data in Appendix B throughout  
23    each of the three permits. Plans to test those  
24    wells in the baseline sampling plan are described  
25    in Section 5 and will be testified to later.

1           Q.     So just to confirm, you reviewed any data  
2     that already existed which would be in Appendix B,  
3     but no baseline sampling has started in the Fox  
4     Hills?

5           A.     That's correct.

6           Q.     Core plugs taken from the base of the  
7     upper confining zone in the Milton Flemmer 1 well  
8     had a fairly high anhydrite weight percentage,  
9     around 86 to 98 percent. Similar in the Archie  
10    Erickson, there was around 95 and a half percent  
11    shown. Did geochemical modeling indicate that it  
12    was likely that the boundary between the two  
13    formations would dissolve due to that percentage of  
14    anhydrite?

15          A.     (BY MS. DOUGLAS) Geochemical modeling  
16    done for the upper confining zone showed little to  
17    no dissolution of anhydrite due to geochemical  
18    reactions with the modeled CO<sub>2</sub>.

19          Q.     And would that apply for both the TB  
20    Leingang and the BK Fischer?

21          A.     That's correct.

22          Q.     So I'm going to ask some questions related  
23    to the formation imaging logs. Would you be the  
24    correct witness to answer for all three storage  
25    facility permit applications? I only ask because

1     it was discussed that you were going to have  
2     another witness at the end that would talk about  
3     differences between the three facilities, or are  
4     you good with answering them?

5         A.     We're good with answering the questions to  
6     all three.

7         Q.     Okay. So in the Milton Flemmer 1 well,  
8     both in the formation imaging logs and within the  
9     thin sections specifically where high anhydrite  
10    content existed, there were a handful of fractures  
11    that were shown. Can you please explain why these  
12    fractures don't pose a risk to the storage  
13    facility?

14        A.     You said for the upper confining zone?

15        Q.     Yes.

16        A.     Could you point to specifically what depth  
17    interval?

18        Q.     So in figure 2-33 and into 2-34 in the TB  
19    Leingang application, it shows that there are a  
20    handful of resistive litho-bound fractures present  
21    in the Opeche/Spearfish interval. Why are these  
22    fractures not a concern as far as containment?

23        A.     They're not a concern for containment  
24    because they're commonly filled. In the case of  
25    the resistive bound fractures, they're commonly

1 filled with anhydrite.

2 Q. So they wouldn't have transmissibility to  
3 have CO<sub>2</sub> move through them?

4 A. Correct. They wouldn't have  
5 transmissibility in the sense of they wouldn't have  
6 sufficient permeability.

7 Q. So now in the BK Fischer application,  
8 similarly in the Archie Erickson 2 well, the  
9 investigation also found fractures, including one  
10 minor fault. I would have the same questions for  
11 that one. I'll let you get to the -- the figure  
12 here. So Figure 2-30 (c) specifically would show  
13 some of the fractures and the minor fault that was  
14 found within the Opeche/Spearfish interval.

15 A. For this well the fractures were also  
16 commonly filled either with anhydrite or clay. In  
17 the case of the minor fault, it -- it appears to be  
18 isolated. It doesn't appear to transect a  
19 sufficient vertical extent to -- to serve as a  
20 fluid migration pathway or to be transmissible.  
21 Meaning it's a minor fault and it doesn't cut  
22 through the entirety of the upper confining zone.

23 Q. And similarly in the last application, in  
24 the Slash Lazy H 5 well there were fractures found  
25 and a minor fault in the Amsden Formation.

1           A.     Again, the minor fault -- or the fractures  
2     are commonly filled, in this case commonly with  
3     anhydrite. Similarly, given the geometry of this  
4     minor fault, it appears to be isolated and does not  
5     have properties to -- for it to serve as a fluid  
6     migration pathway.

7           Q.     So I want to go back to the BK Fischer  
8     application. In the 3D seismic survey that was  
9     done across these three storage facilities, was the  
10    Stanton fault that was suspected to run through the  
11    northwest corner of the BK Fischer storage facility  
12    area found in the 3D seismic?

13          A.     No. The proposed location of the Stanton  
14    fault is on the edge of the 3D seismic survey. We  
15    saw no indication of the fault or any deformation  
16    associated with the fault.

17          Q.     So now I'm going to move to questions  
18    related to Section 3 for the model and simulation.  
19    Do you know what the geographical projection was  
20    used in Petrel for the geologic model?

21          A.     I don't have that information on hand, but  
22    perhaps I could provide it after a break.

23          Q.     Okay. And what is the cell size in the  
24    model both within and outside of the refinement  
25    grid?

1           A.     Outside the refinement grid, it's a  
2     thousand by a thousand feet. Within the refinement  
3     grid, I believe it's 250 feet by 250 feet.

4           Q.     So on Figure 2-3 on page 2-5 that shows a  
5     boundary for the simulation model, could you  
6     explain why the boundary was centered as shown in  
7     that figure within the geologic model?

8           A.     Are you asking why the simulation model  
9     extent was centered within the geologic model  
10    extent?

11          Q.     Yes. Or how it was determined as far as  
12    placement for the centering with it?

13          A.     So the -- the simulation model extent was  
14    selected to cover Summit's sites and have enough of  
15    a boundary -- or have enough cells as to model the  
16    pressure plume and not have artifacts due to  
17    boundary conditions. Additionally, we wanted to  
18    incorporate the nearest site, the DCC West site, to  
19    evaluate potential pressure interference.

20          Q.     In the numerical simulation, are all three  
21    facilities injecting across the same 20-year  
22    injection period?

23          A.     Yes. That's what was modeled.

24          Q.     In this section it's stated that the TDS  
25    value of the Broom Creek measured from the Milton

1 Flemmer 1 was used as the input for the numerical  
2 simulation. Can you explain why the Milton Flemmer  
3 1 sample was chosen out of the three?

4 A. Yes. So the Milton 1 sample was the --  
5 the meeting of the three values. We selected that  
6 as it was a site-specific value close to what could  
7 be considered an average between the three.

8 Q. And could you explain what effect the TDS  
9 input would have on the CO<sub>2</sub> plume?

10 A. Yeah. A higher TDS could potentially  
11 result in a smaller plume.

12 Q. Similarly, it's stated that the  
13 temperature and pressure gradients derived from the  
14 Milton Flemmer 1 were used in the simulation.  
15 Similarly the reasoning behind why the Milton  
16 Flemmer 1 was chosen?

17 A. One of the reasons being wanting to apply  
18 the same reservoir conditions associated with the  
19 salinity value.

20 Q. And could you explain what effect  
21 temperature has on the CO<sub>2</sub> plume? Movement, to  
22 clarify.

23 A. A difference in temperature could result  
24 in either a larger or smaller plume.

25 Q. So let's say like an increase in

1 temperature.

2 A. I can't recall at the moment. I could  
3 provide that answer potentially after a break.

4 Q. You had noted earlier that the CO<sub>2</sub> stream  
5 used in the geochemical modeling was done at  
6 95 percent CO<sub>2</sub> and 2 percent oxygen to be more  
7 conservative because oxygen is likely what's going  
8 to be most reactive. Could you explain  
9 additionally -- so in earlier testimony with group  
10 one, they had stated that the minimum requirement  
11 for the CO<sub>2</sub> purity would be 95 percent to be able to  
12 take CO<sub>2</sub> from sources to send to these storage  
13 facilities. Can you explain why in the numerical  
14 simulation 98.25 percent was used instead of  
15 95 percent? 95 percent being the minimum cutoff  
16 for Summit to take CO<sub>2</sub> from third-party sources.

17 A. Just to clarify, that's what Wade  
18 testified to, 95 not 98.

19 Q. Correct. But the model uses  
20 98.25 percent. I'm just asking why 98.25 percent  
21 was used in the numerical simulation.

22 A. Sure. So 98 percent is the expected  
23 operational composition.

24 Q. And could you just explain what effect CO<sub>2</sub>  
25 purity also has on the CO<sub>2</sub> plume movement? So like

1 a higher CO<sub>2</sub> purity would have what influence on CO<sub>2</sub>  
2 plume movement?

3 A. In this case because of the compositions  
4 where we're talking about, the potential would be  
5 changes in plume size, but they -- it would be very  
6 minimal.

7 Q. As proposed well injectors are drilled, so  
8 for the three applications the six injectors  
9 haven't been drilled yet. As they are drilled and  
10 logging and coring and testing data is gathered,  
11 that planned to be incorporated into the geologic  
12 model and an updated simulation ran prior to  
13 starting injection?

14 A. I don't know specific plans to update the  
15 model, but I believe regulations require validation  
16 of the proposed model inputs with the injection  
17 well data, including the injection test that's  
18 required for each injection well.

19 Q. So to confirm, if -- if the results  
20 indicated a substantial change and the regulatory  
21 group requested that it be done, at that time it  
22 would likely be done?

23 A. By the regulatory group you mean the DMR?

24 Q. DMR.

25 A. Yes, we would.

1           Q.     At what frequency will plume predictions  
2     be updated once operations are underway?

3           A.     No less than every five years.

4           Q.     So I'd like to go to Figure 3-6 on  
5     page 3-10 in the TB Leingang application.

6           A.     I'm there.

7           Q.     For all of the applications when showing  
8     the permeability curves used for siltstone and  
9     anhydrite, they were used equivalently. Could you  
10    explain why you're using the same? So to clarify,  
11    can you explain why the same permeability curve is  
12    used for siltstone and anhydrite?

13          A.     Sure. That's related in part to the core  
14    analysis sampling and the data points available.  
15    Because siltstone and anhydrite are expected to be  
16    low permeability and porosity lithologies, we felt  
17    it was sufficient to apply this data set to both  
18    lithologies in the model.

19          Q.     So I'd like to move to Table 3-5 on  
20    page 3-35.

21          A.     I'm there.

22          Q.     So for all of the applications when having  
23    this table shown for the EPA Method 1, you are  
24    using the proposed locations of one of the  
25    injection wells, being the TB Leingang 1, the BK

1     Fischer 1 and the KJ Hintz 1. Considering these  
2     wells haven't been drilled yet, can you explain how  
3     these values are derived?

4           A.     Sure. So these values are taken from the  
5     geologic model and the simulation model.

6           Q.     And can you explain why it was chosen to  
7     use these rather than the three stratigraphic test  
8     wells?

9           A.     Given that we modeled to populate these,  
10    you'll note that, for example -- so I'd -- just  
11    trying to find a map I'd like to point you to. So  
12    I'd like to point you to page 3-22. So here is a  
13    map of the -- the average pressure change after  
14    20 years of injection. Again, the AOR was defined  
15    using pressure data from the simulations. If you  
16    look at -- here in this case the green triangle  
17    represents the injection well and just to the  
18    southwest of that, that gray triangle represents  
19    the Milton Flemmer well, and you can see that there  
20    is a large difference in pressure between those two  
21    locations. So in that sense it was more  
22    appropriate to use data from the injection well  
23    location to be able to evaluate pressure change.

24           MS. MADCHE: That is all the questions I  
25    have. Thank you.

**EXAMINATION**

**BY MR. STOLLDORF:**

Q. Moving on to Section 4, I have some questions about locations. If you guys can't answer these, just let me know who can. Start on page 4-4, Figure 4-2. Just an AOR map showing occupied structures, among other things. How far exactly -- or approximately how far away from the facility are -- are occupied structures?

MR. BENDER: We have another witness who can provide that unless you know.

MR. STOLLDORF: Do you know who just so I know who to ask?

MR. BENDER: It will be Jimmy Powell.

MR. STOLLDORF: Jimmy.

Q. (MR. STOLLDORF CONTINUING) For the TB Leingang, BK Fischer and KJ Hintz wells, have any baseline samples been taken from these wells to date?

A. (BY MS. OLSEN) Not in this part of the Summit project.

Q. Okay.

A. Water -- Fox Hill -- you mean groundwater monitoring wells; correct?

Q. Correct.

1           A.     Yep.

2           Q.     This one is just related to the KJ Hintz  
3     facility area of review. The Raymond Jensen 1-34  
4     well, File No. 4942, is a plugged and abandoned  
5     well within that facility. Can you briefly explain  
6     the protective measures that are being made to  
7     monitor the CO<sub>2</sub> plume movement near that well?

8           A.     3D seismic surveys will be taken at least  
9     every five years as part of the testing and  
10    monitoring plan to track the plume. And at or  
11    around year 19, Summit proposes putting in an  
12    additional groundwater monitoring well in the Fox  
13    Hills Formation nearby that legacy wellbore.

14          Q.     Do you know how -- approximately how  
15    close?

16          A.     I don't think the final location has been  
17    determined yet.

18                 MR. STOLL DORF:   Okay. That's all I have.

19                                       **EXAMINATION**

20    **BY MR. SUGGS:**

21          Q.     Okay. Bear with me. A lot of my  
22    questions have been asked at different levels, so  
23    I'm going to have to pan through this as I go.

24                 But I'm also going to start with a couple  
25    of questions that were deferred. One being the --

1 looking at Figure 1-1 on 1-2 -- on page 1-2 of the  
2 Leingang application. Okay. I'll start with the  
3 odd shape of the CO<sub>2</sub> plume as it exists in the  
4 modeled stabilized CO<sub>2</sub> extent. Is there any  
5 explanation for why we don't see CO<sub>2</sub> in that central  
6 area, the southwest central area?

7 A. (BY MS. DOUGLAS) Yeah. In this region of  
8 the model, we had low porosity and permeability  
9 layers. That's why you don't see predicted  
10 migration of CO<sub>2</sub> plume there.

11 Q. The low PHIE and perm, I guess, layers  
12 that exist in that area, were they arbitrarily --  
13 and when I say "arbitrarily," just purely due to  
14 the variograms were they assessed or was there  
15 additional seismic evaluation that supported that  
16 low porosity/perm area?

17 A. There is additional seismic data that was  
18 used as control points and to -- to support the  
19 distribution of properties, but it should be noted  
20 that seismic data has resolution images for  
21 resolving thicknesses of different porosity and  
22 permeability layers, so there's potentially some  
23 uncertainty.

24 Q. Okay. So I guess in that explanation, did  
25 it just -- I'm going to tie this back to some of

1 the discussion on the depositional environment.  
2 Would the seismic in that area indicate it was  
3 partially interdunal or do you see the dune  
4 structures there or not?

5 A. Correct. That would suggest the low  
6 porosity and permeabilities typically associated  
7 with those interdunal dolomites as well as  
8 anhydrite deposits.

9 Q. Okay. And then I asked this as well  
10 earlier, but in Township 141 North, Range 88 West,  
11 Section 35, you'll note that on this exhibit, at  
12 least, the stabilized CO<sub>2</sub> plume extent does appear  
13 to contact the storage facility area border. Do  
14 you know what the distance is between there? What  
15 kind of buffer is applied at approximately around  
16 that area?

17 A. Yes. So regarding the stabilized CO<sub>2</sub> plume  
18 extent, it's a short distance, you know, on the  
19 order of 10 feet, but I would like to point out the  
20 red line is the CO<sub>2</sub> extent at the end of injection.  
21 So we feel that that buffer is reasonable, and we  
22 will, you know, reevaluate the predicted plume  
23 movement and our storage facility area boundaries  
24 no less than every five years to confirm that.

25 Q. So just to clarify, the red line is the

1 extent of the CO<sub>2</sub> migration at the end of the  
2 20-year injection cycle?

3 A. Correct.

4 Q. And the gray that goes outside of that  
5 would be where the model is predicting that CO<sub>2</sub> to  
6 migrate during a ten-year postinjection phase?

7 A. Correct.

8 Q. Okay. Moving on to Sections 2 and 3, on  
9 page 2-17 -- I've got to get there myself. The  
10 narrative right above the figure indicates that the  
11 net sandstone thickness in the simulation model  
12 area ranges from 6 feet to 397 feet with an average  
13 of 140 feet. Can you point me at -- somewhere on  
14 the figure below, Figure 2-10a where it would  
15 approach 6, or is that a typo in any way?

16 A. I believe the typo should say -- I believe  
17 those values are from the geologic model extent,  
18 not the simulation model extent, so that is an  
19 error.

20 Q. Okay. So that wouldn't be -- so what  
21 should that read, then?

22 A. Because it's sandstone thickness, I'd have  
23 to calculate that from the model. I can't derive  
24 that from the thickness map.

25 Q. I guess looking at the isopach of the

1     Broom Creek, then, do you see anywhere on that map  
2     that you're presenting where the thickness would  
3     approach 6 feet? I mean in glancing at it, I  
4     thought the -- the thinnest that was represented  
5     was on the order of a hundred feet.

6           A.     Yes. That's why I believe that that's an  
7     error. It should say those values are from the  
8     geologic model extent where the Broom Creek  
9     actually --

10          Q.     Oh.

11          A.     -- does pinch out, not the simulation  
12     model.

13          Q.     Got you. So not the simulation, but the  
14     whole --

15          A.     Correct.

16          Q.     -- geologic?

17          A.     So that -- I believe that sentence is in  
18     error.

19          Q.     And that'd be where it would punch out to  
20     the northeast and the Broom Creek wouldn't exist --

21          A.     Correct.

22          Q.     -- far northeast of the whole model area?

23          A.     Correct.

24          Q.     Okay. Page 2-22. At the bottom of that  
25     page you indicate that there's, I guess, a sample

1 bias towards the sandstones that were sampled.  
2 Does that sample bias affect the overall model in  
3 any way?

4 A. No. So the core samples were used to  
5 calibrate petrophysical logs of porosity --  
6 calculated porosity and permeability, and those  
7 logs were what were used to help derive model  
8 properties. So I -- I don't believe that that bias  
9 impacted the model in a significant fashion.

10 Q. Figure 2-16 on page 2-25.

11 A. I'm there.

12 Q. At the very top of the Broom Creek here,  
13 you have an anhydrite facies identified in column 7  
14 on that figure. And then in column 8 when you  
15 upscale those for the modeling purposes, it's being  
16 applied the siltstone facies. Is there any effect  
17 on the modeling due to that or is there a reason  
18 that was applied instead of the anhydrite facies?

19 A. There is not an effect of that. Both the  
20 anhydrite and siltstone are populated as low  
21 porosity and permeability.

22 Q. So functionally they both act as confining  
23 layers in the modeling?

24 A. That's correct.

25 Q. That drives me to the geochemical side of

1     this so I'm going to jump probably largely over  
2     into Appendix C, but bear with me. The -- the  
3     narrative -- so I'm looking at C-15 and 16 here --  
4     or sorry -- Figures C-15 and 16. I think I'm on  
5     C-12.

6           A.     Figure C-15 and 16 or page --

7           Q.     So the narrative that I'm asking about is  
8     on page C-12 where you reference Figures C-9 and  
9     10, which those figures are on pages C-15 and C-16.

10          A.     Okay.

11          Q.     This narrative indicates that dolomite is  
12     the primary entity in dissolution and that  
13     anhydrite is precipitating it. I just want to  
14     confirm that.

15          A.     That's correct.

16          Q.     Okay. So in previous applications, the  
17     anhydrite has been identified as a primary  
18     dissolving element in those models, in those  
19     geochemical analyses. So I guess my questions here  
20     are what is different about the modeling that was  
21     done here or the chemistry of the water or the  
22     chemistry of the rock that is causing anhydrite to  
23     be a precipitant instead of a dissolving --

24          A.     I don't have that answer readily  
25     available.

1           Q.    Is that something that may be provideable  
2           in short term or is that something I might need a  
3           supplemental response on?

4           A.    I could potentially provide it after a  
5           break.

6           Q.    Okay. I guess I'll -- I guess I'll ask  
7           that if it's not something that can be answered in  
8           testimony after a break, that it would be submitted  
9           as explanation in supplemental.

10          A.    Okay.

11          Q.    Still on C-12 here -- bear with me. So  
12          actually on page C-14, Figure C-8. In this figure,  
13          the bottom figure, shows that mineral trapping is  
14          still on the negative side of the equation so more  
15          dissolution has taken place than precipitation at  
16          this point through the extent of what's presented  
17          on this figure; correct?

18          A.    Yes. So what this figure is showing is  
19          why there's negative amount for mineral trapping.  
20          It's because of that dolomite being dissolved and  
21          that those dissolved carbonates are being  
22          attributed to as carbon that was added into the  
23          system.

24          Q.    Okay. In previous testimony you indicated  
25          that it would be on the order of hundreds of years

1 before true mineralization started happening for CO<sub>2</sub>  
2 in the storage reservoir. Have you projected that  
3 out? Do you know a rough time frame when that  
4 negative trend starts moving the other way?

5 A. We have not modeled that.

6 Q. Okay. C-18.

7 A. Maybe just one point very quickly. Sorry,  
8 we're going back to Figure C-8. You can see by the  
9 slope of the curve, after CO<sub>2</sub> injection ends, we  
10 have less of that mineral trapping and that slows  
11 down over time.

12 Q. But you still haven't taken it to the  
13 point of when that actually reverses? It's just --

14 A. That's correct.

15 Q. -- expected or anticipated that it does  
16 reverse?

17 A. Correct.

18 Q. Okay. Going on to page C-18, the -- the  
19 narrative here for your PHREEQC model, and you've  
20 testified to this earlier, that you used the  
21 diffusion process for the mechanism by which the CO<sub>2</sub>  
22 would enter. And, conversely, if you look at later  
23 in the -- in the appendix when you're talking about  
24 the lower confining zone and the simulation that  
25 was done there, you're talking about advection and

1 dispersion. Can you elaborate a little bit on why  
2 the two different mechanisms are used for the two  
3 different confining zones?

4 A. Yes. So diffusion was used for the upper  
5 confining zone as CO<sub>2</sub> is a buoyant fluid which is --  
6 so CO<sub>2</sub> is a buoyant fluid which is why we needed to  
7 use advection and dispersion which allowed the CO<sub>2</sub>  
8 to dissolve in -- in -- in brine and the density to  
9 allow it to enter the model cells for the lower  
10 confining zone.

11 Q. So for the lower confining zone -- sorry,  
12 I'm going to have to ask you to clarify that.  
13 Focus on why diffusion was used for the upper  
14 confining zone modeling.

15 A. I don't think I can elaborate and provide  
16 that specific answer at this time, but I could  
17 potentially provide it after a break.

18 Q. Okay. Probably the same situation, if I  
19 don't get that answer as part of testimony, I might  
20 want it as a supplemental.

21 A. Correct. We would be able to provide  
22 that.

23 Q. Page C-18 still. The formation brine for  
24 the simulation that was done on the Opeche and as  
25 well as the -- or the Opeche/Spearfish as well as

1     what was done on the Amsden for the lower confining  
2     zone, in both cases you used the brine composition  
3     as it was determined from Broom Creek samples?

4           A.     That's correct.

5           Q.     Can you elaborate on why?

6           A.     Just let me confirm something real  
7     quickly.

8                   So it's my understanding given the  
9     porosity and permeability of at least the  
10    Opeche/Spearfish, we weren't able to collect a  
11    fluid sample due to the immobility of the water due  
12    to low permeability.  Therefore, we used the Broom  
13    Creek as a representative sample as we don't  
14    believe the composition will vary greatly.

15          Q.     Okay.  Still on page C-18, Table C-4 the  
16    average mineral composition of the Opeche/Spearfish  
17    that was used here, can you confirm which facies  
18    within the Spearfish that would represent -- or the  
19    Opeche/Spearfish?

20          A.     This sample -- the average sample here is  
21    approximately 60 percent mineral weight anhydrite,  
22    so I'd interpret that as anhydrite.

23          Q.     On page C-19, middle paragraph there when  
24    you're discussing Figure C-13, you indicate that  
25    the net change due to precipitation or dissolution,

1       in this case you're referencing C2, which is a cell  
2       within the model that was done, has less than 5  
3       kilograms per cubic meter net change. That net  
4       change, is that positive or negative?

5       A.     I'd have to clarify how that was  
6       calculated and provide that as a supplement.

7       Q.     I don't think I could confirm or  
8       guesstimate with the figure in front of me which  
9       way that would be going, so if we could confirm  
10      that as well.

11      A.     Yep. We could provide that as a  
12      supplement.

13      Q.     Page C-25, similar question. This happens  
14      to be the -- Table C-6 on page C-25 -- averaged  
15      mineral composition for the Amsden formation that's  
16      being presented in this table. Could you elaborate  
17      and confirm which facies that were represented in  
18      your modeling?

19      A.     I'd characterize that as a -- well, it  
20      would be represented as a dolostone in our model.

21      Q.     Okay. I guess a similar question on page  
22      C-28. The narrative at the -- in the bottom  
23      paragraph, again you're referencing an overall net  
24      porosity change as less than 2 percent. And can  
25      you tell me whether that's a positive change or a

1 negative?

2 A. I would like to provide that as a  
3 supplement.

4 Q. Okay. Then back up to Section 3,  
5 page 3-7, I believe. The bottom paragraph on page  
6 3-7 you discuss the distances from the edge of the  
7 model and the volume modifiers that were applied as  
8 boundary conditions. Can you spend just a few  
9 moments confirming what those distances are  
10 measured from and to within the model? And then --  
11 well, I'll let you do that first.

12 A. So those distances are measured from the  
13 Broom Creek extent interpreted by the EERC which is  
14 shown on page 2-16 in Figure 2-9.

15 Q. So the distance you're referencing there  
16 is the distance from the edge of the Broom Creek to  
17 the edge of the modeled area?

18 A. To the edge of the simulation modeled --

19 Q. The whole simulation.

20 A. -- area. That is correct.

21 Q. Okay. And then when applying your volume  
22 modifiers as boundary conditions, can you elaborate  
23 on what the effect of those are within the model?

24 A. Yes. So we applied the volume modifiers  
25 to represent the fact that we don't have an

1 infinitely acting aquifer where the Broom Creek  
2 pinches out. Because we don't have an infinitely  
3 acting aquifer, there will be differences in how  
4 pressure responds in the reservoir due to that  
5 pinch-out. And so these modifiers were applied to  
6 take into account that difference in boundary  
7 condition between an infinitely acting aquifer and  
8 the closed boundary.

9 And so the volume modifier is used in the  
10 CMG calculations with the boundary condition to  
11 account for the specific distance beyond the model  
12 where that pinch-out occurs, and so that is  
13 accounted for with the boundary conditions as it  
14 relates to the simulated pressure.

15 Q. So the -- the cell -- the modifier being  
16 applied to a boundary cell allows -- allows that  
17 cell to act as if it has a larger volume than its  
18 individual cell size?

19 A. That's correct. To allow the  
20 computational simulator to account for how that  
21 pressure would respond outside of the model.

22 Q. So the smaller values have less distance  
23 or less volume in the reservoir in that  
24 direction --

25 A. Correct.

1           Q.    -- towards a pinch-out or towards a  
2 boundary of the -- the -- I guess the Broom Creek  
3 as a whole as opposed to what's actually simulated  
4 within the model?

5           A.    That's correct.

6           Q.    So this was asked a little bit, so I'm on  
7 page 3-8, the description your capillary pressure  
8 curves, and you indicate that they were derived  
9 from mercury capture -- mercury injection capillary  
10 pressure testing on the cores; right?

11          A.    Correct.

12          Q.    But then that they were modified. Can you  
13 elaborate on the need why they were -- why it was  
14 necessary to modify those core-derived values and  
15 what that process looked like?

16          A.    So those values were calculated using data  
17 for -- from a single sample, so we looked at the  
18 porosity and permeability from that sample to  
19 upscale it to the ranges of the porosity and  
20 permeability reflected in our model.

21          Q.    Okay. When you say that, was that -- when  
22 you say the single sample, you're referring to the  
23 single sample that was used to derive the two  
24 confining zones, being anhydrite facies values and  
25 siltstone facies values, or am I -- yeah, siltstone

1 and anhydrite.

2 A. We took capillary entry pressure data from  
3 a single sample from those units to derive these  
4 curves.

5 Q. Okay. And so, I guess, the modification  
6 of that mercury -- mercury-injection-derived data  
7 to be representative for CO<sub>2</sub> injection, what was  
8 done to, I guess, adjust the mercury fluid  
9 properties to the CO<sub>2</sub> fluid properties?

10 A. I could provide that answer after a break.

11 Q. Okay. Same, I guess, question or same  
12 response, then, if it's something that doesn't come  
13 as part of direct testimony, we'll want  
14 supplemental explanation for it.

15 Down in the AOR page 4-14, it was actually  
16 referenced in a number of locations, including on  
17 page 4-12 in Table 4-6, but there's a reference  
18 that's being used to the Tongue River Formation for  
19 a freshwater aquifer. I just -- I guess I'm just  
20 going to point out and confirm that Tongue River  
21 isn't a formation recognized on the North Dakota  
22 stratigraphic column at this time. There's an RI  
23 59 -- Report of Investigation 59 that was published  
24 in 1977 that proposed renaming the Tongue River and  
25 the Ludlow as they correlate from Montana and

1 Wyoming to the Slope and -- drawing a blank on the  
2 other one and I don't have it written here -- but  
3 rename those two formations. The Tongue River as  
4 you're referencing here would be equivalent to  
5 those two formations that are represented on the  
6 geologic strat column in North Dakota; correct? Or  
7 can we confirm that?

8 A. (BY MS. OLSEN) We can confirm that.

9 Q. Okay. On page 4-16, there's a line here  
10 in your narrative that reads, "The Pierre Formation  
11 is the thickest shale formation in the AOR and  
12 primary geologic barrier between the USDWs and the  
13 injection zone."

14 The primary barrier would be the upper  
15 confining zone; correct?

16 A. (BY MS. DOUGLAS) That's correct. So  
17 that's a misstatement.

18 Q. It would just be an additional barrier --

19 A. Correct.

20 Q. -- of significant thickness as what's  
21 indicated?

22 A. Yeah. We -- we consider it as a tertiary  
23 confining zone because there's the primary  
24 confining zone, a secondary confining zone, and  
25 then we consider the -- everything between the

1 Inyan Kara Formation and the Fox Hills as a  
2 tertiary confining zone.

3 Q. One last item I'm going to jump -- it kind  
4 of mixes between the AOR and the -- and Section 3.  
5 It's actually on 3-42 I think where the --  
6 page 3-42 where the narrative is. Right at the  
7 bottom of this page there's a statement,  
8 "Therefore, the AOR is delineated as the storage  
9 facility area plus a 1-mile buffer."

10 This immediately follows a discussion of  
11 the risk-based AOR approach that was taken, but the  
12 one-mile buffer that's applied for that AOR, is  
13 that -- is there any importance to the one mile  
14 that's being used or is that just a value that is  
15 chosen?

16 A. I can confirm during break, but to my  
17 understanding, that the AOR at a minimum has to be  
18 the storage facility area plus a one-mile buffer,  
19 but I will confirm that my understanding is correct  
20 during the break.

21 MR. SUGGS: Okay. That'll be all I've got  
22 on these sections.

23 HEARING EXAMINER GARNER: Okay. At this  
24 time why don't we take a break for lunch for an  
25 hour.

(Recessed at 12:29 p.m. and reconvened at 1:30 p.m.)

HEARING EXAMINER GARNER: Okay. We are  
back on the record.

Attorney Bender, how would you like to proceed? Are we going to answer some questions that were pending?

MR. BENDER: Yes. I don't know if I should say we'll recall -- we'll bring back Amanda Douglas who -- and there were some questions posed for her and she said she needed a little time during the break to research those answers. What we were proposing, perhaps to save some time, is she can read what she believes to be the question and then she can give the answer. And then there was a question or two also that Caitlin Olsen got that needed a little time to respond to. So I can just ask Amanda a few questions and proceed that way, if that's okay with you, Mr. Examiner.

HEARING EXAMINER GARNER: Is that okay?

That's fine.

REDIRECT EXAMINATION

BY MR. BENDER:

Q. All right. Amanda, before we took the break, when you were answering some questions that

1       were posed to you by the Commission staff, I  
2       believe it was your testimony that if you had a  
3       little time during the break, you could take a look  
4       at some of your notes and some of the documents you  
5       have and respond to those questions; is that  
6       correct?

7           A.     (BY MS. DOUGLAS)   That's correct.

8           Q.     Do you want to just walk through the  
9       questions as you understood them and then provide  
10      us with the responses?

11          A.     Yes.

12          Q.     Okay.

13          A.     With respect to the projection system  
14      used, it was NAD27 North Dakota State Plane South  
15      U.S. feet.

16                 The Commission had a question about  
17      generally how would having a higher reservoir  
18      temperature impact plume size. So it should be  
19      noted that temperature isn't the main driver in  
20      dictating plume size. There's other parameters  
21      that are more sensitive or the -- the -- the CO<sub>2</sub>  
22      plume size is more sensitive to other parameters.  
23      But generally a higher temperature could result in  
24      a bigger plume.

25                 I had a question on why we saw

1 precipitation of anhydrite and dissolution of  
2 dolomite and what constituents in the water  
3 chemistry or the mineralogy used for those models  
4 was different than previous permit submitted that  
5 would cause this. We would like to provide that  
6 answer as a supplement.

7 I had questions about the transport  
8 mechanisms for the PHREEQC modeling. For the upper  
9 confining zone, diffusion is expected to be the  
10 dominant transport mechanism due to the buoyancy of  
11 the CO<sub>2</sub>. At the boundary between the reservoir and  
12 the confining zone, the reservoir will have a  
13 higher CO<sub>2</sub> concentration, so diffusion will allow  
14 the movement of gas from an area of high  
15 concentration to an area of low concentration.

16 So with respect to advection and  
17 dispersion, these are the expected dominant  
18 transport mechanisms for the lower confining zone.  
19 So dispersion in the sense of the CO<sub>2</sub> mixing and  
20 forming saturated brine and that saturated brine  
21 mixing with unsaturated CO -- brine that's  
22 unsaturated with CO<sub>2</sub> and the different densities  
23 between the two and that mixing by dispersion, so  
24 between that and advection, those are the expected  
25 dominant transport mechanisms, and that's why those

1       were used for the lower confining zone.

2               And there was a question on the use of  
3       MICP data and calculated relative permeability  
4       data, and we'd like to provide that as a  
5       supplement.

6           Q.     That's all you have? Those were the  
7       questions you received; is that correct? Those are  
8       the questions?

9           A.     Those are the questions I received. There  
10      is one more question that I received that Ms. Olsen  
11      will be providing the answer to.

12               MR. BENDER: Mr. Examiner, unless there's  
13      other questions from the staff of Ms. Douglas, I  
14      would move to Ms. Olsen.

15               HEARING EXAMINER GARNER: Okay. That's  
16      fine.

17           Q.     (MR. BENDER CONTINUING) Caitlin, can you  
18      recite for us what the question was that you're  
19      going to address for us now?

20           A.     (BY MS. OLSEN) Yeah. The first question,  
21      Rich, I believe you asked -- I don't remember the  
22      order in the questions, but you had asked about the  
23      nomenclature for some of those aquifers and namely  
24      the Tongue River. The new name that is more  
25      recently used is Bullion Creek, and so that is the

1 same formation. We're talking about the same thing  
2 there, just to clarify.

3 And then the second question you had asked  
4 about the AOR and the minimum one-mile buffer  
5 outside of the storage facility area. That  
6 language comes from 43-05-01-05 and it's -- that  
7 language is outside throughout that rule, and it  
8 references it -- the area several times. And just  
9 to give an example, it will say something like the  
10 evaluation must do X, Y, Z in the facility area and  
11 within one mile of its outside boundaries.

12 So the AOR, when we talk about reviewing  
13 wells and items inside of the AOR, is the storage  
14 facility area and one-mile boundary pursuant to  
15 43-05-01-05.

16 MR. BENDER: Okay. If there's no  
17 questions from the staff, Mr. Examiner, we're ready  
18 to move forward with our next witness as we talked.  
19 Oh, I'm sorry.

20 MR. SUGGS: I did have a couple questions  
21 that weren't addressed.

22 **FURTHER EXAMINATION**

23 **BY MR. SUGGS:**

24 Q. The net positive or net negative?

25 A. (BY MS. DOUGLAS) I had stated earlier

1       that we'd like to provide those, too, as  
2       supplements.

3           Q.     Okay. As a supplement still. Okay. And  
4       then I apologize, but I did have one set of  
5       questions that I forgot to hit and I have to find  
6       it again in my notes. Page 2-66.

7           MR. BRAATEN: Of Exhibit 1A?

8           MR. SUGGS: Yes.

9           MR. BRAATEN: Thank you.

10          Q.     (MR. SUGGS CONTINUING) And I guess the  
11       narrative actually starts on page 2-65 regarding  
12       your Mohr-Coulomb Critical Stress Analysis of  
13       Faults. The faults that you have depicted in  
14       Figure 2-42, can you identify what depths those  
15       were identified at or what range of -- there's been  
16       testimony that there's no faults in the injection  
17       reservoir or the confining zones. So where are  
18       these faults coming from? How were they  
19       identified?

20          A.     Yes. So the 3D seismic survey acquired  
21       over the project area led to the identification of  
22       several deep faults within the storage -- all three  
23       storage facility areas. These faults originate  
24       within the Precambrian basement and all of them  
25       terminate below the top of the Interlake Formation,

1       which is approximately 3,000 feet below the Broom  
2       Creek Formation.

3           Q.     So they're all deep --

4           A.     Correct.

5           Q.     -- features?

6                    Okay. And those are some of the items  
7       that are identified or at least visibly  
8       identifiable on Figure 2-41 on page 2-64?

9           A.     That's correct.

10                   MR. SUGGS: Okay. Thank you.

11                   MR. BENDER: Okay. Mr. Examiner, if there  
12       aren't any further questions, our plan now is to  
13       call four new witnesses, and then we will recall  
14       Caitlin Olsen to do the comparison between what  
15       we've discussed in great detail, which is the  
16       Leingang with the Fischer and the Hintz. And then  
17       we're going to recall Wade Boeshans to talk about  
18       the amendment that the Commission received a letter  
19       on from Minnkota.

20                   HEARING EXAMINER GARNER: Okay.

21                   MR. BENDER: So our first witness will be  
22       James Powell.

23                   HEARING EXAMINER GARNER: Mr. Powell,  
24       please raise your right hand.

25

**JAMES POWELL,**

being first duly sworn, was examined and testified  
as follows:

**DIRECT EXAMINATION**

**BY MR. BENDER:**

Q. You go by Jimmy; is that correct?

A. Yes, sir.

Q. Will you state your full name for the  
record?

A. James Earnest Powell.

Q. And, Jimmy, by whom are you employed?

A. Summit Carbon Solutions.

Q. And in what capacity?

A. Chief operating officer.

Q. What I'd like you to do is briefly  
highlight for the examiner, Commission staff and  
opposing counsel your educational background and  
work experience.

A. Okay. I have a bachelor of science in  
engineering, and I have about 35 years of  
experience in the energy industry, predominantly  
upstream/midstream, with the last 25 leading large  
projects such as this, both internationally and in  
the U.S.

Q. Okay. So I'm just going to have a

1 question or two for you having to do with  
2 engineering and operational design. To what  
3 standard will the flowlines be constructed?

4 A. The flowlines, like the remainder of the  
5 pipeline system, will be constructed -- designed,  
6 constructed and operated in accordance with DOT  
7 regulations, CFR 49, 195.

8 Q. Okay. And can you explain how the three  
9 entities that have made application for the storage  
10 permits are going to work together and monitor this  
11 system and utilize the data that's provided  
12 throughout the SCADA system?

13 A. Yeah. So from receipt of the CO<sub>2</sub> molecules  
14 at the capture facilities through transportation of  
15 the pipeline system and through -- to the  
16 sequestration system to the injection site and  
17 subsurface, it will all be operated as one  
18 integrated system under one supervisory control and  
19 data acquisition system, and it will be controlled  
20 from a single control center.

21 MR. BENDER: And, Mr. Examiner, after I  
22 finish with a few questions of these other  
23 witnesses, Mr. Powell will be available for  
24 questions from the staff. So if I can move to the  
25 next witness, I'll do so.

1 HEARING EXAMINER GARNER: Sure.

2 MR. BENDER: Next witness is John Hunt.

3 HEARING EXAMINER GARNER: Mr. Hunt.

4 Please raise your right hand.

5 JOHN HUNT,

6 being first duly sworn, was examined and testified  
7 as follows:

8 DIRECT EXAMINATION

9 BY MR. BENDER:

10 Q. John, would you state your name for the  
11 record, please?

12 A. (BY MR. HUNT) John Hunt.

13 Q. And, John, by whom are you employed?

14 A. By EERC.

15 Q. And in what capacity?

16 A. I'm a senior geoscientist and measurement  
17 reporting verification, or MRV, specialist.

18 Q. And can you briefly provide for the  
19 Commission staff your educational background and  
20 work experience?

21 A. Sure. So I hold bachelor of science and  
22 master of science degrees in geology. I'm a  
23 licensed professional geologist. And prior to the  
24 EERC, I worked at Chesapeake Energy as a petroleum  
25 geologist.

1           Q.     Okay.  And you're going to talk just a  
2     little bit about -- at least from questions from  
3     me, about Section 5 of the application which is --  
4     has to do with testing and monitoring; is that  
5     correct?

6           A.     That's correct.

7           Q.     Okay.  And my first question is can you  
8     provide a brief summary of Table 5-2 in the  
9     application?

10          A.     Yes.  So Table 5-2 begins on page 5-4 of  
11     the TB Leingang application or Exhibit 1A.  And let  
12     me back up here just a little bit.  So the testing  
13     and monitoring plan, the full plan is laid out  
14     between Tables 5-1, 5-2 and 6-1.  So 5-1 being the  
15     preinjection plan, 5-2 is the operational plan and  
16     6-1 is the postinjection plan.  We're hitting the  
17     highlights of Table 5-2 simply because this makes  
18     up the bulk of testing and monitoring and includes  
19     all of the different various activities that Summit  
20     will -- will perform.

21                 And so let's -- yeah, again, let's go to  
22     Table 5-2.  This is an overview of the operational  
23     testing and monitoring plan.  And just to start us  
24     off, a brief description of the -- of really what's  
25     contained in this table.  So if we're looking at

1 the columns and we're stepping left to right, we  
2 see the first thing is the Monitoring Type. I'll  
3 touch on that a little bit more in a minute, but  
4 essentially, you know, whether it's a CO<sub>2</sub> stream or  
5 surface facilities, the wellbores or the  
6 environment, those generally make up the monitoring  
7 types.

8 Then we step over and we have the  
9 Parameter, so what parameters are we interested in  
10 measuring. And then the next column describes the  
11 activity that will collect those data. Then we  
12 have the primary purpose of the activity listed,  
13 the equipment and any tests associated with  
14 gathering that data. The location where that data  
15 will be gathered and a sampling frequency  
16 described.

17 Finally, in the last three columns, we  
18 have how that data -- what data will make its way  
19 into the reporting to DMR. So we have the Report  
20 Content, the Reporting Method and then the  
21 Reporting Schedule specified.

22 So how I like to think about this plan  
23 overall is you're really following the CO<sub>2</sub> stream as  
24 it enters the sequestration facility, and you're  
25 first and foremost analyzing the CO<sub>2</sub> stream in terms

1 of composition and end-to-end metering. So those  
2 are some of the things highlighted in the rows  
3 within the CO<sub>2</sub> Stream Analysis section. There's  
4 also the Surface Facilities Leakage Detected --  
5 Detection Plan as well as the Corrosion Prevention  
6 and Detection Plan. Those generally at a high  
7 level have already been touched on a little bit so  
8 I won't go into great detail there.

9 And then we move to the wellbore sections.  
10 Now the CO<sub>2</sub> stream has traveled through the surface  
11 facilities and it's entered the wellbore, so here  
12 we're primarily focused on activities that look at  
13 monitoring wellbore integrity. So, for example,  
14 pressure, temperature gauges, fiberoptic cable, all  
15 of which provide continuous readings to monitor  
16 the -- the operations of those wells, of the  
17 injection wells.

18 And, finally, we have -- I guess  
19 continuing on the wellbore monitoring part, we also  
20 include a Downhole Corrosion Detection Plan, and  
21 the key activity there is the pulse neutron log  
22 which is also feeding into the wellbore mechanical  
23 and integrity piece where we have periodic pulse  
24 neutron logs planned to be acquired throughout the  
25 life of the project.

1           And then, finally, the -- so now we've  
2       injected the CO<sub>2</sub> into the storage reservoir and what  
3       we're interested in is monitoring the volume in a  
4       targeted way as that CO<sub>2</sub> expands within the storage  
5       reservoir and ultimately that volume contained  
6       within the area of review boundary. So we have a  
7       Near Surface monitoring plan, which is primarily  
8       made up of soil, gas and groundwater -- I guess  
9       wholly made up of soil, gas and groundwater  
10      sampling, and then an Above-Zone Monitoring  
11      Interval, which is defined as the Opeche/Spearfish  
12      to the Skull Creek. Again, pulse neutron logging  
13      for logging saturations, and then the fiberoptic  
14      cable to look at temperature.

15           And -- and then, finally, we end with the  
16      monitoring of the storage reservoir itself which,  
17      again, will be conducted with the fiberoptic cable  
18      to monitor the temperature profile of the storage  
19      reservoir as well as casing-conveyed pressure  
20      temperature gauges on the injection wells and --  
21      and also a downhole pressure temperature gauge  
22      installed in the reservoir monitoring well. And  
23      then we have planned 3D seismic surveys as has been  
24      testified to a little bit prior to this point, as  
25      well as a plan for monitoring seismicity with a

1 surface array of seismometers.

2 MR. BENDER: No further questions of this  
3 witness. And the next witness will be -- yeah,  
4 next witness is going to be Jay Volk.

5 HEARING EXAMINER GARNER: Jay Volk. Mr.  
6 Volk, please raise your right hand.

7 JAY VOLK,  
8 being first duly sworn, was examined and testified  
9 as follows:

10 DIRECT EXAMINATION

11 BY MR. BENDER:

12 Q. Jay, can you state your full name for the  
13 record, please?

14 A. (BY MR. VOLK) Yes. Thank you, Lawrence.  
15 Jay Volk.

16 Q. And, Jay, by whom are you employed?

17 A. Summit Carbon Storage.

18 Q. In what capacity?

19 A. I am the sequestration director of health,  
20 safety, environmental.

21 Q. Okay. And can you provide for us briefly  
22 your educational background and work experience?

23 A. Yes. Lawrence, I have a bachelor's  
24 degree, master's degree and PhD -- PhD from North  
25 Dakota State University. My PhD is in the

1 department of natural resources with range  
2 sciences. My work history has largely been through  
3 BNI Coal. Spent approximately 17 years there  
4 working on permitting, compliance, testing and  
5 monitoring, financial assurance plans and site  
6 closures. The last two years I've been employed  
7 with Summit Carbon Solutions working within the  
8 Class VI regulations.

9 Q. You're going to have to slow down a little  
10 bit.

11 A. I apologize. Thank you for the reminder.

12 Q. And, Jay, you're here today to discuss  
13 Section 7, which is emergency and remedial response  
14 plans; is that correct?

15 A. That is correct.

16 Q. As well as financial assurance which  
17 appears in Section 12; is that correct?

18 A. That is correct.

19 Q. Okay. So you'll be able to handle  
20 questions from the Commission staff on those two  
21 subject areas; is that correct?

22 A. That is correct.

23 Q. Okay. Let me just ask you a question or  
24 two, first with respect to emergency and remedial  
25 response. Can you tell us generally what is the

1 purpose of emergency and remedial response plans?

2 A. Yes. Lawrence, the purpose of the ERRP in  
3 Section 7 is really to provide guidance for a  
4 quick, safe and effective response plan to keep the  
5 community and -- community, workers and the  
6 environment safe. Items that we look at included  
7 in there are definitions and reviews of local  
8 resources --

9 Q. Slow down a little bit.

10 A. I am sorry for a second time.

11 Looking at areas such as what are the  
12 local resources in the areas, identification of  
13 potential events, as well as the response to the  
14 events.

15 Q. And can you explain for us, slowly, the  
16 interactions that you've had with local first  
17 responders in Oliver, Mercer and Morton Counties?

18 A. Yes. Our interactions between the three  
19 counties have really included a multilayered  
20 approach to outreach. We've engaged all three  
21 counties with LEPC meetings. We've worked within  
22 dispersion methodology of meetings. We've worked  
23 individually with LEC portfolio holders, as well as  
24 with local responders on an individual basis  
25 through safety tours or landowner meetings.

1           Q.     Okay.   Jay, let's shift gears a bit and  
2     talk a little bit about Section 12, which is  
3     Financial Assurance Demonstration Plan.   Can you  
4     provide for us a brief overview of the  
5     methodologies used to determine the financial  
6     assurance?   And if you have to direct the  
7     Commission's attention to any part of the  
8     application, that'd be great.

9           A.     Thank you, Lawrence.   And I would direct  
10    you to Table 12 -- or excuse me -- 12-1 on  
11    page 12-2.   The methodology that we used in  
12    developing the financial assurance plan really  
13    consisted of known cost, which included areas such  
14    as plugging in injection wells, the PISC -- the  
15    PISC plans, testing and monitoring, as well as site  
16    closures and the flowline abandonment sections.

17                Other areas we looked at were estimated  
18    costs, and that was used to determine the ERRP as  
19    well as endangerment to USDWs.   We also looked at  
20    previous literature as well as previous Class VI  
21    permits in developing the financial assurance plan.

22           Q.     Okay.   And can you provide for us an  
23    overview of the cost estimates associated with the  
24    financial assurances?

25           A.     Yes.   So, again, referring to Table 12-1,

1     for the TB Leingang, the plugging and injection  
2     well cost was 1,166,000. Likewise, the PISC  
3     storage and facility monitoring was 4,225,000, as  
4     well as the flowline plugged and abandoned at  
5     243,000.

6             And, I apologize, I'd have to ask -- the  
7     PISC and storage facility is 4,225,000 if I  
8     misspoke on that. The ERRP is 11,100,000. And the  
9     endangerment of USDW is 2,695,000. And that gives  
10    a total of 20,316,000 between the three -- or  
11    excuse me -- between the TB Leingang.

12            I do want to make a quick reference before  
13    I move on to the other two sites is what is covered  
14    by the surety bond versus pollution liability  
15    policies is also outlaid in Table 12-1 in which the  
16    plugging of injection wells, PISC storage facility  
17    and monitoring, flowline plugged and abandonment  
18    cost, as well a site closure and remediation will  
19    be covered under a surety. Whereas, an ERRP as  
20    well as the endangerment of USDWs, a pollution  
21    liability policy will be used.

22            Again, there is minor differences between  
23    SCS2 and SCS3 in which the total bond for SCS2  
24    proposed is \$20,868,800 as well as the KJ Hintz at  
25    \$20,817,800.

1           Cumulatively, the three are bonded at just  
2           over \$62 million.

3           MR. BENDER:   Mr. Examiner, that's all the  
4           questions I have for this witness.   We do have  
5           another witness that we'd like to call at this  
6           time, Jean Oddy.

7           HEARING EXAMINER GARNER:   Ms. Oddy, please  
8           raise your right hand.

9                               **JEAN ODDY,**  
10          being first duly sworn, was examined and testified  
11          as follows:

12   **DIRECT EXAMINATION**

13          **BY MR. BENDER:**

14           Q.   Jean, would you state your full name for  
15           the record, please?

16           A.   (BY MS. ODDY)   Jean Oddy.

17           Q.   And by whom are you employed?

18           A.   Summit Carbon Solutions.

19           Q.   In what capacity?

20           A.   Sequestration project engineer.

21           Q.   And could you briefly highlight for the  
22           Commission staff your educational background and  
23           work experience?

24           A.   Yes.   I have a bachelor of science in  
25           petroleum engineering from Montana Technological

1 University. Before Summit I worked for Neset,  
2 which is an engineering and geological consulting  
3 firm, in which most of my responsibilities was  
4 around drilling engineering, design and operations,  
5 as well as plugging and abandonment projects in the  
6 Williston Basin, including wells such as Class II  
7 saltwater disposal wells. And I joined Summit last  
8 year in January.

9 Q. Okay. And you're here to discuss any  
10 questions the Commission staff might have about  
11 well design, casing, cementing, plugging and  
12 completion; is that correct?

13 A. That's correct.

14 Q. Okay. A question or two having to do with  
15 well design and casing. Can you -- excuse me.  
16 With respect to Section 9, can you describe the  
17 well construction plan design? And if you have to  
18 refer to a particular figure or exhibit, please do  
19 so.

20 A. Yes. I'd like to direct your attention to  
21 Figure 9-1 on page 9-2. So in this well  
22 construction program, starting with the surface  
23 section, the surface hole will be drilled with  
24 freshwater-based drilling fluid down to a depth  
25 within the Pierre Formation. Surface casing will

1       then be set and placed at least 50 feet below the  
2       base of the lowest underground source of drinking  
3       water. Surface casing will then be set and  
4       cemented in place from the surface casing shoe all  
5       the way to the surface of the ground to provide  
6       isolation to and from the underground source of  
7       drinking water.

8               Moving on to the next section, we've got  
9       the long string casing, so that section will be  
10      drilled and cored at specific intervals. And then  
11      in accordance to Class VI regulations and  
12      administrative code, corrosion resistant alloy  
13      casing will be set in place to a depth below the  
14      Broom Creek Formation which is in the Amsden. The  
15      long string casing will then be cemented in place  
16      with CO<sub>2</sub> resistant cement from the shoe all the way  
17      through the Mowry Formation, then cemented to  
18      surface.

19             MR. BENDER: Mr. Examiner, that's all the  
20      questions I have for this witness.

21             I would point out that at this point in  
22      time, given the space that we have here for  
23      witnesses to sit, I would like to give the  
24      Commission an opportunity to ask these witnesses  
25      questions, and then also point out that we do have

1 two other individuals who are in the audience. And  
2 in the event these witnesses have some questions  
3 that they feel can be better answered by someone  
4 else, I would bring those people up. One is Jamey  
5 Backus, B-a-k-k-e-s [sic], and the other is Luis --  
6 how do I pronounce that?

7 MR. POWELL: Piasco.

8 MR. BENDER: Piasco, P-i-a-s-o [sic].

9 HEARING EXAMINER GARNER: Okay. Any  
10 questions from the staff?

11 **EXAMINATION**

12 **BY MS. MADCHE:**

13 Q. I will go ahead and start. As before I'm  
14 going to start with what I think are deferred  
15 questions for this group. Early on Richard Suggs  
16 had asked on whether or not you would be able to  
17 provide industrial codes that best reflect the  
18 capture sources, such as the ethanol facilities.  
19 Is that something that you can provide at this  
20 time?

21 A. (BY MR. VOLK) Yes. The ethanol NAICS is  
22 325193 reflecting as asked for the capture NAICS  
23 code, and that is for ethanol.

24 Q. Earlier an answer was provided for  
25 approximately how many miles of the MCE pipeline

1 transmission pipeline system is within the North  
2 Dakota PSC jurisdiction. 352 miles was provided,  
3 but I believe, Jimmy, you would be able to confirm  
4 that number?

5 A. (BY MR. POWELL) Yes. It's 3 --  
6 approximately 332 miles are in the jurisdiction of  
7 the Public Service Commission. In the delta  
8 roughly 19 miles is within the NDIC jurisdiction.  
9 So Wade had it accurate and correct. But the PSC  
10 is 332.

11 Q. Okay. I had asked earlier on with the  
12 first group yesterday on whether or not royalties  
13 were being paid on the full CO<sub>2</sub> stream or just the  
14 CO<sub>2</sub> mass of the stream. Is there anyone in this  
15 group that can confirm that or is that something  
16 that would need to be a supplemental?

17 MR. BENDER: No one can answer that.  
18 We'll have to supply you with supplemental  
19 information on that one.

20 MS. MADCHE: Okay.

21 Q. (MS. MADCHE CONTINUING) In Section 2  
22 earlier I had asked what the maximum pressure was  
23 applied during the microfracture testing in the  
24 Milton Flemmer 1 that was done across the  
25 Spearfish/Opeche Formation.

1           A.     (BY MS. ODDY) Yes. I would like to  
2     direct your attention to Figure 2-7 on the TB  
3     Leingang 1 permit.

4           Q.     I'm ready.

5           A.     So relative to Milton Flemmer 1, the  
6     maximum injection pressure is highlighted with the  
7     black square box on the image on the upper section  
8     there, and from that graph it looks like around  
9     5580 psi was -- was pumped as a maximum. However,  
10    after evaluation, there was no breakdown pressure  
11    observed at that maximum pressure injected.

12                And then referring to Table 2-4, we do  
13    have a summary on the Opeche/Spearfish  
14    microfracture stress test breaking down your  
15    breakdown pressure as well as your propagation  
16    pressure.

17           Q.     So some additional questions as it  
18    pertains to the microfracture testing that was  
19    done. A question that I had posed earlier was how  
20    do you determine which sand package within the  
21    Broom Creek to target for these tests?

22           A.     So prior to the micro in situ stress  
23    tests, we ran logs such as your magnetic resonance  
24    log as well as an FMI log and sonic log, and in  
25    combination of that along with the core photos that

1 we observed, along with some field description,  
2 were able to pick the representative sand package  
3 within the Broom Creek Formation and pick the test  
4 steps.

5 Q. Could you elaborate a little bit more on  
6 what makes a representative sample?

7 A. Yes. So I'm going to go back here to  
8 another figure. Figure 2-5. We looked at the  
9 sonic log, and on column 7 we've got the facies  
10 there, so we looked at, you know, a good, thick  
11 sandstone package. And then looking at the  
12 magnetic resonance log, that showed us good  
13 porosity in that test point. Then looking at  
14 making sure there are no visible bedding or  
15 fractures within the core photos that was -- that  
16 was collected and any field description that was  
17 noted by the geologists on site.

18 Q. So just to confirm, you're looking for a  
19 sand package that would represent good porosity and  
20 permeability but without fractures that could  
21 possibly affect the results of the MBT test?

22 A. That's right.

23 Q. So as a follow-up to that, on average to  
24 date across the Broom Creek on previous  
25 applications, the frac grading has between 0.69 psi

1 per foot to 0.712 psi per foot. Could you explain  
2 why we're seeing a larger variation across these  
3 three facilities, specifically as it relates to the  
4 Slash Lazy H 5 which was at 0.784 psi per foot  
5 which would be above that range, or what you  
6 anticipate might have caused it to be higher than  
7 what we've seen to date on past applications?

8 A. So with that for the KJH -- or sorry --  
9 the Slash Lazy H 5, cause of that could potentially  
10 be activities during the drilling operation that  
11 may impact. Also could be some bedding within the  
12 FMI logs that was observed.

13 However, we are willing to, you know, work  
14 with the DMR on solutions on confirming that --  
15 that value at the KJH sites. It is also part of  
16 our plan to perform an in situ stress test in the  
17 KJH, at least on one of the wells. In addition, we  
18 are planning on performing an injectivity test in  
19 the injection wells again to confirm these values,  
20 and that also applies in all six injection wells.

21 Q. Would you be able to explain what effect  
22 the frac gradient has on the CO<sub>2</sub> plume size?

23 MR. BENDER: That's probably a question  
24 that we'll have to recall Amanda to answer.

25 MS. MADCHE: Okay. And am I correct that

1 we'll want to do that at the end as far as  
2 recalling?

3 MR. BENDER: Yeah. What I thought we'd do  
4 is after we finish with this group, once again,  
5 because of the size of the group, we're going --

6 MS. MADCHE: Sure.

7 MR. BENDER: -- to have to recall Wade  
8 Boeshans and also Caitlin, and perhaps we could  
9 bring Amanda up at the same time and get that done  
10 if the examiner's okay with that.

11 HEARING EXAMINER GARNER: I am okay with  
12 that. I was going to allow cross of these four  
13 before they go to sit down and bring them back up  
14 and sit down and bring them back up. Does that  
15 work? Is that fine?

16 MR. BENDER: I mean, there's a lot of  
17 people. I think it's a lot of cross. We can  
18 finish our -- the remaining witnesses, I think,  
19 very quickly. That's kind of what I had in mind  
20 this morning, but it's certainly your call,  
21 Mr. Examiner.

22 HEARING EXAMINER GARNER: Mr. Braaten, any  
23 input? Are you okay waiting with the other  
24 witnesses to be called and then we can -- then  
25 you'll have an opportunity to cross any one of the

1 witnesses and recall them up here.

2 MR. BRAATEN: Yeah. I think with respect  
3 to that, I just want to be clear on record that  
4 specifically because what I'm running into now is  
5 difficulty with scheduling with experts and when  
6 they're going to be here, but thinking about what  
7 Mr. Bender is saying whether I cross these folks  
8 now or cross all of these folks right after, I  
9 don't think that's going to help me on anything  
10 else, so --

11 HEARING EXAMINER GARNER: Okay.

12 MR. BRAATEN: -- I'm okay with that --

13 HEARING EXAMINER GARNER: Okay.

14 MR. BRAATEN: -- but reserving my prior  
15 objections --

16 HEARING EXAMINER GARNER: Sure.

17 MR. BRAATEN: -- on the scheduling.

18 HEARING EXAMINER GARNER: Your objection's  
19 noted, so we'll go then with your witnesses.

20 MR. BENDER: Thank you.

21 Q. (MS. MADCHE CONTINUING) Okay. Just to  
22 continue on the microfracture testing which you've  
23 already given some testimony on, just confirming  
24 that we would want to see a microfracture test done  
25 on either the KJ Hintz 1 or 2 just to confirm that

1 value which was proposed in the testing and  
2 monitoring plan.

3 Let's see here. So as it pertains to  
4 the -- how the microfracture test data is used in  
5 the simulation to calculate the bottomhole pressure  
6 constraints that are used in the model, if the  
7 results do come out substantially different on the  
8 KJ Hintz 1 or 2, whichever you decide to do to  
9 confirm that result, it is likely DMR would want  
10 the model reran because of the bottomhole pressure  
11 constraint being affected by that frac gradient.

12 A. Understood.

13 Q. Okay. I'm now moving into Section 5, so I  
14 would like to go to Table 5-3. So on this table  
15 you have the CO<sub>2</sub> stream composition specification  
16 that must be met for you to, I believe, accept a  
17 third-party source. My question related to this is  
18 whether or not all the sources you currently have  
19 contracts with have had samples taken or FEED  
20 studies completed to confirm they meet or exceed  
21 that stream composition?

22 A. (BY MR. POWELL) So the individual quality  
23 spec for each course is greater than 95 percent --

24 Q. Okay.

25 A. -- carbon dioxide, and we did -- we had

1     done a stack test at each facility, and that will  
2     be done -- the plants typically do them annually.  
3     Unless we have a reason to do them intermittently,  
4     we'll follow their schedule, but the individual  
5     spec is not greater than 95 percent CO<sub>2</sub>.

6           Q.     Yeah. I think the confusion was the  
7     narrative right above Table 5-3 since it states,  
8     "Any new CO<sub>2</sub> streams from third-party entities not  
9     accounted for at the time of permitting must also  
10    meet or exceed the specification once commingled."

11           And you're saying at a minimum at the  
12    source side they would be greater than 95 percent  
13    with the anticipation that the commingled stream  
14    would be greater than 98.25 percent; correct?

15           A.     Correct. And it's my recollection I think  
16    all but one of the 57 sources were 98 percent or  
17    higher. There was one facility that was about 96.  
18    So commingled, yes, it would be greater than the  
19    98 percent.

20           Q.     And for any new sources that might come  
21    down the line, I'm guessing additionally you would  
22    want a stack test done before to confirm that  
23    they're going to meet the specifications to take  
24    that source?

25           A.     You're correct.

1           Q.     Could you -- yeah, we would require that  
2     that data be submitted to us before we would  
3     approve new sources too.

4           A.     Okay.

5           Q.     Could you elaborate on how the baseline  
6     isotopic signature of the CO<sub>2</sub> stream will be  
7     resampled if new sources are added later on?

8           MR. HUNT:   So I think I can respond.

9           MR. POWELL:   Okay.   Go ahead because I was  
10    just going to read a paragraph, but go ahead, John.

11          A.     (BY MR. HUNT)   Okay.   So in the event that  
12    a new source is added and approved by DMR, Summit  
13    would sample that new commingled CO<sub>2</sub> stream within  
14    one year after adding that additional CO<sub>2</sub> source to  
15    get its composition and isotopic signature.

16          Q.     (MS. MADCHE CONTINUING)   Let's see.   Will  
17    the meters that exist -- or sorry.   Let me rephrase  
18    that.

19                   Will meters exist at all the outlets at  
20    the CO<sub>2</sub> source facilities, both in state and out of  
21    state, to be able to account for how much CO<sub>2</sub> mass  
22    and total injection stream volumes each individual  
23    source is contributing?

24          A.     (BY MR. POWELL)   Yes.   So Coriolis meters  
25    will be installed consistently throughout the

1 system.

2 Q. And how do you plan to ratio those mass  
3 and volumes back to the individual three storage  
4 facility permits for reporting?

5 A. So I'm not the measurement expert, but it  
6 would be reconciled. We'll have custody transfer  
7 from the -- on the outlet or discharge side of the  
8 capture facilities, and then we'll have -- we'll  
9 have a measurement station at the terminus of the  
10 main line. And then we'll have Coriolis meters or  
11 measurement facilities at each of the injection  
12 sites. And so it'll be a mass balance from volume  
13 in from each of the 57 source plants all the way  
14 through what's injected at each of the well sites  
15 and that'll be reconciled.

16 Q. So I want to move us to Figure 5-3 on  
17 page 5-12 of the TB Leingang application. So this  
18 figure shows a generalized flow diagram. Could you  
19 walk us through this figure specifically as it  
20 relates to the capabilities to isolate individual  
21 flowlines from each other and how pigging of the  
22 flowline system will take place?

23 A. Yes, and I'd -- this is a difficult  
24 diagram to do that from. If you start from right  
25 to left -- so each line segment on the discharge

1 side of a capture facility will have a launcher.  
2 And so -- and then each pipe diameter change within  
3 the pipeline system will also have a launcher and  
4 receiver. And then when you get to the  
5 sequestration site, there will be a receiver at  
6 each of the well sites.

7           So if you're looking right to left, so in  
8 a common pipeline diameter size, you know, the  
9 launcher will be the initiation of that pipe  
10 segment, and then it'll go through right to left  
11 and then you will be -- for instance, at the  
12 sequestration site before it reaches the injection  
13 facility, then it will go through a receiver, and  
14 then downstream will be a meter or measurement  
15 station which will include a gas chromatograph,  
16 Coriolis meter and pump. And then the -- the --  
17 the line of demarcation will be on the inlet valve  
18 upstream of the shutdown valve at the injection  
19 facility.

20           Q. So just to confirm, with the three -- with  
21 the three individual flowlines, are you able to pig  
22 those separately?

23           A. Yes. Each pipe diameter will be able to  
24 be pigged independently. So in the sequestration  
25 where we have 16, 20 and 24, each of those diameter

1 changes, the entire segment will be able to be  
2 pigged independently.

3 Q. And as a follow-up, are there any plans  
4 for an isolation valve at the junction of where the  
5 BK Fischer flowline, called NDL-325, splits off  
6 from the TB Leingang flowline known as NDL-327?

7 A. I may -- may need help from Jamey if  
8 that's a diameter change.

9 MR. BENDER: Okay. We'll bring him up  
10 later.

11 Q. (MS. MADCHE CONTINUING) Can you confirm  
12 the land description of where that junction occurs  
13 at those two flowlines? Looking at the prior  
14 figure, Figure 5-2 it looks like it's Section 5,  
15 Township 141 North, Range 87, but it's pretty small  
16 scale on the map.

17 A. It looks correct to me as well, but it is  
18 small scale.

19 MR. POWELL: And, again, perhaps Jamey can  
20 confirm, Lawrence.

21 Q. (MS. MADCHE CONTINUING) So now I'd like  
22 to go to Table 5-4 on page 5-14. In this table the  
23 flowline has a maximum rate of 936 million standard  
24 cubic feet per day, approximately equivalent to 18  
25 million metric tons a year. Earlier on in the

1 project summary, the modeling had shown that this  
2 facility, the TB Leingang specifically, would be  
3 able to take 124.4 million metric tons over a  
4 20-year period which would average around  
5 6.22 million metric tons annually. Can you please  
6 confirm there's no intent to send -- even though  
7 the line has the capacity to send the full 18  
8 million metric tons, there's no intent to send it  
9 all to this one facility?

10 A. That is correct. There is no intent.

11 Q. And on average, what do you anticipate the  
12 flow rate to be on this flowline?

13 MR. POWELL: Again, I'm going to have to  
14 defer to Jamey for that, Lawrence. Sorry.

15 Q. (MS. MADCHE CONTINUING) Similarly, on the  
16 BK Fischer application instead, and on its Table  
17 5-4 on page 5-14, it has a maximum rate of  
18 314.5 million standard cubic feet per day,  
19 equivalent to around 6 million metric tons a year,  
20 and its modeling had more of an annual amount of  
21 4.92 million metric tons.

22 So, again, just confirming again that you  
23 would not be exceeding what the modeling had showed  
24 in those bottomhole pressure constraints even if  
25 the flowline capacity would allow you to?

1           A.     That's correct.

2           Q.     And I'm interested in what the average  
3     flow rates will be for all three flowlines for when  
4     that gets deferred.

5                   MR. BENDER:   That's another Jamey  
6     question?

7                   MR. POWELL:   Yes.

8           Q.     (MS. MADCHE CONTINUING)   So, additionally,  
9     on that table, for all three of the applications a  
10    typical operating pressure has a 900 psi range,  
11    roughly, going from 1250 to 2150 psi.   And this  
12    might be a question that you need to defer again.  
13    I'm wanting to know why such a big range was given  
14    and whether or not you have -- kind of more within  
15    that range where you actually typically plan to be  
16    for all three facilities.

17          A.     The range is just -- it's to keep the CO<sub>2</sub>  
18    in super critical state, and so that's the range  
19    from 1250 to 2150, and it's really applicable over  
20    the -- predominantly over the pipeline system  
21    because over the 2500 miles we have about --  
22    including -- excluding the pumps at the discharge  
23    site of the capture facilities, we have 17, I  
24    believe -- if I recollect properly, 17 intermediate  
25    pump stations, so you have that pressure gradient

1 from the discharge down to the suction side of  
2 the -- of the next intermediate pump station, so  
3 that's the range of pressures.

4 As it says, the maximum operating pressure  
5 is 28 -- 2183, but the discharge set points will be  
6 2160, and then we'd run the surge analysis and, of  
7 course, you know that's 110 percent so that's,  
8 according to the math off the top of my head, about  
9 2400.

10 Q. So a couple follow-ups to that. In the  
11 modeling, the model was done as being pressure  
12 constrained both on bottomhole pressure and  
13 wellhead pressure and not weight constrained. I'm  
14 curious as to why you have a maximum discharge  
15 pressure of 2160 psi when the wellhead pressure  
16 constraint in the model was only 2100 psi.

17 A. Yeah, I might have to defer that one.

18 MR. BENDER: Jamey again.

19 Q. (MS. MADCHE CONTINUING) And just a  
20 statement, because this isn't a weight-constrained  
21 model, typically DMR would be going forward with  
22 setting a wellhead pressure constraint based on the  
23 model and not on operating conditions.

24 When it comes to kind of the fluctuation  
25 that you had mentioned that you have on the

1 pressure to keep it in a super critical state, will  
2 the metering that you're planning to use be able to  
3 handle those fluctuations knowing that the density  
4 of CO<sub>2</sub> is affected greatly by both temperature and  
5 pressure and both the temperature and pressure on  
6 this Table 5-4 is a fairly substantial range?

7 A. Yes, it is. It will. The Coriolis meters  
8 can handle that variation.

9 Q. And are those mass flow meters or  
10 volumetric meters?

11 A. Again, I'm not the measurement expert, but  
12 I believe that they're mass flow meters.

13 MR. BENDER: Do you have the answer?

14 MR. HUNT: No.

15 MR. BENDER: Okay.

16 Q. (MS. MADCHE CONTINUING) So some questions  
17 related to the corrosion prevention and monitoring  
18 detection that's being implemented for all three  
19 storage facilities. Can you elaborate a little bit  
20 more on the ER -- the ER probes that are proposed  
21 and the impressed current cathodic protection  
22 system that's going to be used along the flowline  
23 system?

24 A. (BY MR. HUNT) Yes. So for the ER probe,  
25 DMR can think of those as -- you know, you guys are

1 familiar with a corrosion coupon. So imagine this  
2 as a miniaturized corrosion coupon that is then  
3 attached to a probe that's then attached to the --  
4 to the flowline where it's subjugated to the -- the  
5 stream continuously, and in real time there will be  
6 continuous measurements of the electrical  
7 resistance of that -- of that miniaturized coupon  
8 or -- or that probe, said another way. Those --  
9 those resistivity measurements are sensitive to  
10 changes in mass and thickness in particular.

11 Q. What material is the composition of the ER  
12 probes?

13 A. So they will be of the flowline material  
14 as well as the wellbore material.

15 Q. So there will be two probes at at least  
16 each injection site?

17 A. That is my understanding.

18 Q. And with the impressed current cathodic  
19 protection system, is that combined as far as the  
20 same system that's going to be across the flowline  
21 and the transmission pipeline operated as a  
22 continuous protection?

23 A. (BY MR. POWELL) It is.

24 Q. Referencing back to that Figure 5-2, I'm  
25 just looking for confirmation on what the land

1 description would be for the terminus point.  
2 Again, on this one it looks like it's Section 5,  
3 Township 141 North, Range 86 West.

4 MR. BENDER: Is that something we can  
5 supply you in a supplement?

6 MS. MADCHE: Yeah. Both of those  
7 locations could be confirmed in a supplement. That  
8 would be fine.

9 Q. (MS. MADCHE CONTINUING) So a question on  
10 the seal pot system that is planned to be used to  
11 maintain the tubing/casing annulus pressure to  
12 approximately 300 psi. Are you anticipating any  
13 on-site tank storage such as vessels needing to be  
14 on site for that system that would be holding,  
15 like, packer fluid or brine, not necessarily a  
16 nitrogen vessel?

17 A. (BY MS. ODDY) At this time I don't  
18 believe we plan on having storage tanks for  
19 corrosion-inhibited fluid, but we will have the  
20 nitrogen seal pot like you said adjacent to the  
21 wellhead.

22 Q. I guess just a note. If at any point  
23 those plans do change, secondary containment such  
24 as a dike would be required around any brine  
25 storage or the packer fluid.

1           And also a note that a Sundry variance  
2       would be required to have the 300 psi annulus  
3       pressure just because currently as rule requires,  
4       it's to be greater than the injection pressure.

5           A.     Understood.

6           Q.     I believe this has already been answered  
7       earlier in part, but just to confirm, no baseline  
8       soil, gas sampling or groundwater sampling has  
9       taken place yet; correct?

10          A.     (BY MR. HUNT) That is correct.

11          Q.     And that would be anticipated to begin  
12       approximately a year in advance of injection  
13       operations beginning?

14          A.     That is also correct.

15          Q.     So this question is specific to the KJ  
16       Hintz and it may need to be deferred. I'm just  
17       looking for how that year 19 was determined for the  
18       year to install the Fox Hills monitoring well next  
19       to the Raymond Jensen 1-34 P&A well.

20          A.     Yeah. So in general the idea there was,  
21       as has been testified to, you know, previously,  
22       seismic surveys will be acquired at least every  
23       five years, so, you know, year 2, year 4, year 9,  
24       year 14, year 19. And so the idea there was that  
25       as Summit is monitoring the CO<sub>2</sub> plume expanding in

1 the storage reservoir, we don't anticipate at this  
2 time that that legacy wellbore will see CO<sub>2</sub> and  
3 certainly within that time frame.

4 But, you know, taking a proactive approach  
5 and after taking the seismic data and then  
6 reviewing that data to see how is the CO<sub>2</sub> plume  
7 progressing, is it conforming to expectations, so  
8 that year 19 really just allows some of the  
9 opportunity, the -- the optionality to wait to  
10 install that well until, you know, it is needed.  
11 And, of course, if it's determined that it may be  
12 needed prior to then, then they have that option as  
13 well.

14 Q. So I want to reference Section 5.7.2. Let  
15 me get a page number. So that would be page 5-26  
16 in the TB Leingang application. And it's paragraph  
17 4, and this language is in all three applications.  
18 There's a statement that Summit reserves the right  
19 to evaluate and modify, if necessary, appropriate  
20 groundwater sampling locations and frequency. Just  
21 a note that any changes to the frequency or  
22 locations should go through DMR for approval and  
23 review.

24 A. Yes. Acknowledged.

25 Q. And that would apply as well as far as any

1 changes made to the near surface monitoring during  
2 the PISC period.

3 A. Understood.

4 Q. Could you give a little more testimony on  
5 the local passive seismicity array that's planned  
6 to monitor for potential induced seismicity?

7 A. Sure. So at this time Summit has plans to  
8 install multiple seismometers at the site. At this  
9 time -- well, a specific layout or design or number  
10 of stations is unknown, but prior to injection  
11 Summit would request bids from vendors to put  
12 together a site-specific strategy.

13 We understand today that by multiple -- in  
14 order to properly triangulate and locate any  
15 seismicity events, you would need at least three  
16 seismometer stations as a minimum.

17 Q. Just a statement that once a layout's  
18 known, that information should be provided to DMR.

19 A. Understood.

20 MS. MADCHE: Let's see. I think that's  
21 all I have currently. Thank you.

22 **EXAMINATION**

23 **BY MR. STOLLDORF:**

24 Q. Jimmy, I asked a question earlier that  
25 they punted to you, so I'll ask it again. At its

1       closest, approximately how far away is the facility  
2       for the TB Leingang from an occupied dwelling?

3           A.     (BY MR. POWELL) I apologize because I  
4       don't have each site memorized, but I believe the  
5       closest dwelling to either -- any of the well sites  
6       is about 4400 feet -- I'm sorry -- 2200 feet.  
7       2200 feet. I believe the furthest is about  
8       4100 feet. But it's 2200 feet. And we can clarify  
9       if that's Leingang or if that's one of the other  
10      two.

11           MS. MADCHE: I think we might just ask  
12      that a supplemental is provided as far as the  
13      proximity of how close the flowline is for each  
14      individual one to the closest dwelling.

15           MR. POWELL: Okay. And I believe the  
16      closest dwelling to a flowline at either location  
17      is 700 feet, but we could provide the exact  
18      distances for all three.

19           MS. MADCHE: Could you add to that also  
20      closest distance to a wind turbine, specifically  
21      for the TB Leingang application?

22           MR. POWELL: Yes, we can do that.

23           MS. MADCHE: Sorry to jump in.

24           Q.     (MR. STOLLDORF CONTINUING) So Section 7,  
25      the Emergency Remedial and Response Plan, that's

1       you, Jay; is that correct?

2           A.     (BY MR. VOLK)   Yes.

3           Q.     Under the Section 7.6 -- I'll let  
4       everybody get there. It indicates that the company  
5       organizational structure is still in flux and in  
6       development. Do you know -- I'd note that it's  
7       expected that we -- to complete that before being  
8       provided authorization to inject. We would expect  
9       that to be nailed down.

10          A.     Without a doubt. We're continuing to work  
11       on, as the rest of the project continues to  
12       develop, an integrated response plan as well which  
13       will be consistent with this one, and we will  
14       supply that when done and prior to injection.

15          Q.     Okay. So this is in the PISC section.  
16       Hopefully one of you can answer this. For all  
17       three applications on Figure 6-2 -- give me a  
18       second and I'll get a page number for you. That is  
19       page 6-6 in Exhibit 1A for the TB Leingang  
20       application.

21                Can you -- oh, sorry. Are you guys there?

22                Explain how the CO<sub>2</sub> extent ten-year  
23       postinjection boundary was determined?

24          A.     (BY MR. HUNT) I think we would want to  
25       bring one of the other witnesses up to answer that.

1 MR. STOLLDORF: Probably Amanda?

2 MR. BENDER: (Nods head.)

3 Q. (MR. STOLLDORF CONTINUING) What's the  
4 setback being proposed for the flowlines?

5 A. (BY MR. POWELL) Again, the setbacks for  
6 the flowlines, similar to the -- to the pipeline in  
7 North Dakota that's under PSC jurisdiction,  
8 complies with State law, 500 feet as a minimum.

9 Q. What type of notification system's in  
10 place should residents or -- and/or businesses need  
11 to be notified in an emergency?

12 A. (BY MR. VOLK) We've had numerous  
13 conversations with Oliver County, Mercer County and  
14 Morton County, and this is an area we've determined  
15 to work cumulatively on and develop. So right now  
16 there's multiple systems being used between Mercer  
17 County and Morton County. I believe Mercer County  
18 and Oliver are both using reverse 911. Morton  
19 County is using that as well as I believe some  
20 secondary options.

21 So we have committed to continuing working  
22 with all three counties to provide the data needed  
23 to make sure the notification system is -- is going  
24 to be consistent throughout all three counties.

25 Q. How often do you plan on doing training

1 with these local emergency response teams?

2 A. On an annual basis at minimum. I believe  
3 it's not to exceed 15 months, but it is on the  
4 annual basis.

5 MR. POWELL: Yeah. I'll just add that  
6 since we know that North Dakota -- and I'm not sure  
7 of a specific -- Jay, you could help me on Mercer  
8 or Morton or Oliver, but a lot of the counties have  
9 volunteer fire departments and sometimes those  
10 personnel interchange or are unavailable, so we've  
11 committed to providing training on a more frequent  
12 basis as needed.

13 Q. (MR. STOLLDORF CONTINUING) I hope you  
14 guys will -- someone here at the table will be able  
15 to answer this one, but this has come up in the  
16 past, but are there any special considerations for  
17 DMR field inspection staff to be coming onto the  
18 sites? Do you have -- or do you have any -- are  
19 you aware of any issues that might bring up, having  
20 a DMR inspector on site -- some of the sites?

21 A. (BY MR. VOLK) As expected, unrestricted  
22 access for any regulatory items such as DMR access.  
23 With that being said, previous work I've done has  
24 always provided on-site hazard training for and up  
25 to and including inspectors so they have the proper

1 notices of what is out there or what needs to be  
2 out there. And if any special training would be  
3 required for those inspectors, we will make sure  
4 that's available.

5 Q. Would you be able to provide us --

6 MR. SUGGS: Sorry.

7 MR. STOLLDORF: Oh, go ahead.

8 MR. SUGGS: On that note, if there is  
9 anything anticipated, at this time I would ask that  
10 it be provided as a supplemental for what you'd  
11 anticipate the DMR inspection staff needing to have  
12 under their belt or have training for accessing  
13 your facilities.

14 MR. VOLK: We will provide that.

15 MR. SUGGS: Thank you.

16 Q. (MR. STOLLDORF CONTINUING) As it relates  
17 to Sections 9, 10 and 11, the construction plugging  
18 and completion plans for the Class VI wells and  
19 monitoring wells, we just want to note that it will  
20 require typical DMR approvals prior to executing,  
21 just so you understand.

22 A. (BY MS. ODDY) Understood.

23 Q. I want to move to Section 11, the  
24 injection well. I have one question -- or a couple  
25 questions. Can I -- okay. Then we'll go to 12.

1       Sorry.   Excuse me.

2               You're approximating it'll cost about  
3       \$583,000 to plug one injection well.   Are you guys  
4       considering that it's going to probably require a  
5       big rig to handle that size of tubing?

6       A.     That's correct.   With a 7-inch tubing, we  
7       will need a bigger workover rig.   In addition to  
8       that, the anticipation of the plugging plan is also  
9       to set CO<sub>2</sub> resistant cement.   So those estimated  
10      costs are included in the plugging costs.

11      Q.     Okay.   And you touched on this earlier  
12      about the surety bonds, but you're proposing to use  
13      a surety bond for the injection well plugging phase  
14      and the PISC phase.   Are you planning to have one  
15      surety bond or two separate bonds for each phase?

16      A.     (BY MR. VOLK)   At this point in time we  
17      have not one -- allocated -- or we have not  
18      committed to a certain provider, so that'll be  
19      forthcoming, at minimum 30 to 60 days prior to  
20      injection it would be submitted to you.   We know we  
21      will be using the surety and the pollution  
22      liability for those, and I can't today tell you in  
23      certainty if those will be split between the phases  
24      you asked.

25               MS. MADCHE:   I'm just going to jump in,

1 and not necessarily a recommendation but something  
2 to consider is clearly as you work through closing  
3 one of these facilities, plugging the injection  
4 wells is going to be the first item. If they are  
5 on separate sureties, that would allow you the  
6 ability to request one to be released while  
7 maintaining the other one for continued PISC  
8 monitoring. So, again, just something to consider.

9 MR. VOLK: Appreciate that, and we will  
10 provide additional information to you.

11 Q. (MR. STOLL DORF CONTINUING) Can you  
12 elaborate a little more on the emergency and  
13 remedial response plan and how the endangerment to  
14 USW -- or underground sources of drinking water  
15 costs were determined?

16 A. I just want to make sure I'm getting to  
17 the right figure. If you bear with me for one  
18 second. There it is. So I'm going to direct your  
19 reference to page 12-10 and Table 12-7. So, first  
20 of all, I want to start off with what the actual  
21 scenario was used to determine the estimated cost  
22 on ERRP as well as to your specific question the  
23 USDWs.

24 The scenario that was used was a well  
25 failure or integrity issue with the well in which a

1       containment -- loss in containment event happened.  
2       To get into more specific details on that, I will  
3       have Jean talk through that. But to the specific  
4       cost as it relates to the USDWs, it is broken out  
5       between -- in Table 12-7, the general response  
6       actions, delineation and water replacement at  
7       1.89 million as well as the quarterly monitoring  
8       which is dictated on a ten-year period for 750,000.  
9       And then the plugging and abandonment cost of the  
10      groundwater -- groundwater monitoring wells in that  
11      area is another 55,000, which came up to  
12      2.6 million.

13           Q.     And you did mention that the failure  
14      mechanism is a loss of a containment event?

15           A.     That's correct.

16           Q.     Okay. Just want to note that the  
17      average -- okay. I don't need to. All right.  
18      Never mind.

19           MS. MADCHE: No. I do have a follow-up on  
20      that. Clearly, the costs are slightly different  
21      for all three facilities for the emergency remedial  
22      response. Can you just kind of go over what  
23      parameters were used to determine those costs that  
24      would cause that fluctuation?

25           MR. VOLK: Yes. The difference largely

1 comes into on the general response delineation and  
2 water replacement line item. What we tried to do  
3 is look at more site-specific characterizations in  
4 those areas, how many wells, what would be their  
5 water replacement cost, and that was the  
6 distinguishing difference that drove the number up  
7 or down.

8 MR. STOLLDORF: Nothing further for me.

9 EXAMINATION

10 BY MR. SUGGS:

11 Q. Just a couple of additional items. I'm  
12 going to jump back up to 5-13. The second-to-last  
13 paragraph on that page related to custody transfer  
14 of the CO<sub>2</sub>, the way that's described is that the CO<sub>2</sub>  
15 when it reaches the terminus point will become the  
16 custody of SCS1 and it will remain that way until  
17 it goes down the hole at any of the three different  
18 facilities. Am I understanding that intention  
19 correctly?

20 A. (BY MR. POWELL) So that's page 5-15?

21 Q. Page 5-13, the second-to-last paragraph.

22 A. Oh, sorry. All right. That's my  
23 understanding.

24 Q. Okay. As the flowlines are anticipated to  
25 be owned by the individual storage facilities,

1       SCS1, 2 and 3, would Summit be opposed to a  
2       requirement that would require a flow meter at  
3       each -- I guess at the beginning of each of the  
4       individual flowlines and an actual custody transfer  
5       happening as it moves from one line into the other?

6       A.     So versus having measurement at the  
7       terminus of the main line for the -- sorry. As  
8       opposed to just having the single meter at the  
9       terminus of the main line at the -- at the  
10      jurisdiction breakpoint and then an individual  
11      meter at each well pad or well site, you're  
12      suggesting or recommending that we'd have an  
13      intermediate meter, then, at the beginning of each  
14      of the laterals from that segment of main line,  
15      flowline to each well site.

16      Q.     (MR. SUGGS CONTINUING) Yeah. I think you  
17      would end up with at least two additional meters in  
18      play, one being where the CO<sub>2</sub> would go north to the  
19      KJ Hintz facility and one at the point where it  
20      goes west from the Leingang to the Fischer.

21      A.     I'm not opposed to that.

22      Q.     Okay. With respect to the cathodic  
23      protection system that's being proposed, has that  
24      already been designed at this point?

25      A.     It hasn't been -- the impressed current

1       cathodic protection system?

2           Q.     Yeah.

3           A.     Generally.  We're going to have to --  
4       since we've added additional source points and  
5       additional laterals along the whole system, we're  
6       going to have to go back and rebalance the system  
7       and figure out if the location of the ground  
8       well -- the ground beds have changes, where they  
9       need to be expanded, et cetera.  So it needs to be  
10      reconfigured upstream of the sequestration area.

11          Q.     Okay.

12          A.     As far as the sequestration area, it's  
13      generally been designed but we'll refine.

14          Q.     Okay.  So that is still under works and  
15      will be refined?

16          A.     Correct.

17          Q.     Okay.  So when that is determined, we'll  
18      want the location of the ano beds identified, and  
19      pursuant -- there's -- on page 5-15 in Section  
20      5.3.1, there's indication of -- what am I  
21      reading -- Summit Carbon Solutions will supply DMR  
22      with a map of cathodic protection boreholes to meet  
23      the requirements of 43-05-01-5.  Do you anticipate  
24      actually drilling any cathodic protection boreholes  
25      or will this system entirely utilize ano beds?

1           A.     It's my understanding ano beds.   We'll  
2     clarify.

3           Q.     Okay.   And so, regardless, we'd want those  
4     locations identified.

5           A.     Yeah.

6           Q.     And I think, John, you testified to this  
7     earlier, but there's some narrative on 5-29 that  
8     indicates that you will be running 3D seismic at  
9     years two, four and nine.   It is the intent to run  
10    3D seismic as early as year two after injection?

11          A.     (BY MR. HUNT)   That's -- yes.   Yeah, and  
12    in the narrative it says "by year two," so just to  
13    be clear.

14          Q.     Okay.   But my point -- my confirmation is  
15    that there will be a sequence of 3D seismic run  
16    shortly after beginning injection and another one  
17    prior to the five-year review?

18          A.     Correct.

19          Q.     Okay.   I'll point out that if anything  
20    looks significantly off at that two-year mark, it  
21    is expected that you will report that and we'll  
22    begin the determination whether or not we need to  
23    accelerate that hearing.

24          A.     Understood.

25          Q.     On page 5-32 there's the narrative about

1 the traffic light system for the passive  
2 seismicity, and you have the cutoff points of 2.7,  
3 4.0 and 4.5. Can you elaborate on what the  
4 significance of those values as cutoff points are?

5 A. So 2.7 is the point at which humans can  
6 begin to feel seismicity, and so that's why that  
7 one is listed there. For events 4 and 4.5, I don't  
8 have off by memory -- I would need to go and refer  
9 back to the team on that one.

10 Q. Okay. If that's something that can't be  
11 provided in short notice or short period as part of  
12 this testimony, possibly a supplemental just  
13 confirming what the importance of those values is  
14 in that system.

15 A. Understood.

16 Q. And I think this one is for Jay. On 7-17,  
17 the last sentence under the 5 -- sorry -- 7.5.1  
18 section, it reads, "In addition, assistance has  
19 been secured from local emergency services to  
20 implement this ERRP."

21 Which emergency services have you  
22 specifically worked with and secured their  
23 assistance in execution?

24 A. (BY MR. VOLK) So we continue to develop  
25 this. This is an overarching plan. We have

1     reached out to, as I've said, Morton County, Oliver  
2     County as well as Mercer County, including the fire  
3     departments in numerous of the surrounding towns.  
4     A couple of them are Beulah, Hazen, Center, Zap.  
5     So without having what I would call -- and I'm  
6     going to say maybe that statement today is not  
7     totally defined as the ERRP isn't, but continued  
8     working agreements with -- or continued working  
9     with them to commit to: One, I understand there's  
10    a memorandum of understanding of mutual aid between  
11    all of them or actually statewide now. So they  
12    have recognized that. Two is they've recognized  
13    that we will continue to work together in  
14    developing that plan and know they have different  
15    capabilities between the units. And that is what  
16    we're going to continue to work on to supply what I  
17    would call as an integrated plan between all three  
18    counties.

19           Q.     So in -- I guess with respect to this  
20    statement in the application --

21           A.     We have not secured an agreement, so I  
22    would say that wording probably should be changed  
23    at this point.

24           Q.     Okay.

25           A.     I would say commitment's a better word

1       than agreement.

2               MR. SUGGS: That's all I need. Thank you.

3               HEARING EXAMINER GARNER: Okay. Before we  
4 recall those witnesses, why don't we take a  
5 ten-minute break.

6               MR. BENDER: Okay.

7               (Recessed at 2:56 p.m. and reconvened at  
8 3:12 p.m.)

9               HEARING EXAMINER GARNER: We are back on  
10 the record. Attorney Bender, you wanted to recall  
11 some witnesses.

12              MR. BENDER: Yes. We're going to recall  
13 Caitlin Olsen.

14              HEARING EXAMINER GARNER: Microphone.

15              MR. BENDER: Oh, sorry. We're going to  
16 recall Caitlin Olsen. We're going to recall Wade  
17 Boeshans. And then to answer some of the questions  
18 that came up from staff, we'll be recalling Amanda  
19 Douglas, and then we'll have one new witness. As  
20 you may recall, there were questions to the  
21 previous group and they were deferred to Jamey  
22 Backus.

23              And I apologize, I misspelled his name  
24 earlier when there was a question on it. It's  
25 B-a-c-k-u-s.

1           So with that in mind, we'll call Caitlin  
2       Olsen back.

3           HEARING EXAMINER GARNER:   Ms. Olsen, just  
4       a reminder, you're still under oath.

5   **REDIRECT EXAMINATION**

6       **BY MR. BENDER:**

7           Q.     Caitlin, I'm going to show you what's been  
8       previously marked as Exhibit 8B.   Can you tell me  
9       what 8B is?

10          A.     (BY MS. OLSEN)   8B is the Storage Facility  
11       Permit Application Comparison Summary Table.

12          Q.     And when we started the hearings, I  
13       briefly explained to the --

14          MR. SUGGS:   Lawrence, have you handed that  
15       out yet?

16          HEARING EXAMINER GARNER:   Do you have one?

17          MR. SUGGS:   No.

18          Q.     (MR. BENDER CONTINUING)   When we started  
19       the hearing, Caitlin, you may recall me talking  
20       very briefly about the fact that we were going to  
21       spend a lot of time on the Leingang application and  
22       then we were going to sort of do -- contrast and  
23       compare Leingang with Fischer and Hintz after that.  
24       Do you recall that?

25          A.     I do.

1           Q.     Okay.  And is 8B sort of a visual aid and  
2     you being able to go through and make those  
3     comparisons?

4           A.     That's right.

5           Q.     Okay.  Let's start -- I'm not going to  
6     interrupt you much, but why don't you start by  
7     first talking about the various columns and what  
8     your method was for laying this out and then you  
9     can explain it to the Commission.

10          A.     Sure.  So the intent of this comparison  
11     summary table was just to lay out the differences  
12     between all three permits.  Listening to the  
13     hearings today, I feel like most of those points  
14     have been covered by DMR or otherwise in testimony.

15                 But you'll see here across the top the  
16     column named SFP Permit Section, that relates to  
17     the section of the permit that we're talking about.  
18     Then you'll see Summit Carbon Storage #1, TB  
19     Leingang/Milton Flemmer 1, that's referring to  
20     permit number one, the TB Leingang permit.  
21     Likewise, the second column is the BK Fischer  
22     permit.  And the third column is the KJ Hintz  
23     permit.

24          Q.     Okay.  Then let's -- why don't we start  
25     out first with the Project Summary, and what I'll

1     probably do is have you explain that in detail, and  
2     then we can kind of walk through the -- the other  
3     sections and you can probably more abbreviate your  
4     discussion of it.

5           A.     Sure.  So as Wade testified to the project  
6     summary earlier today, the only material difference  
7     in the three permits in relation to the project  
8     summary is the applicant name listed.  All other  
9     aspects of Wade's testimony apply to the TB  
10    Leingang, the BK Fischer and the KJ Hintz as you'll  
11    see noted in that row.

12          Q.     Okay.  Let's go to the next column -- or  
13    not the next column, the next row.

14          A.     Section 1, Pore Space Access.  There's  
15    minimal content changes between the permits, as  
16    you'll see noted.  There is one thing to specify in  
17    the BK Fischer permit and that is that there is  
18    Coyote Creek -- Coyote Creek mining -- mine land  
19    located within the hearing notification area.

20          Q.     And I think as a result of some questions  
21    that came to Amanda, she pointed that out in one of  
22    the exhibits; is that correct?

23          A.     That's right.

24          Q.     Let's go on then to Section 2.

25          A.     That's the geologic exhibits portion of

1 the storage facility permit. You'll remember as  
2 Amanda testified to yesterday and earlier today  
3 that the model extents used across all three  
4 permits are the same. Logging efforts are the  
5 same. Microfracture in situ stress tests were  
6 performed in all three wells and all three --  
7 excuse me -- all three permits, and all three  
8 permits used the same 2D and 3D seismic surveys.

9 The differences that we'll talk about here  
10 mainly have to do with site-specific  
11 characterization work. You'll note that in the TB  
12 Leingang permit the Minnekahta Formation is present  
13 as Amanda had testified to earlier. The Minnekahta  
14 Formation is absent in the BK Fischer permit and in  
15 the KJ Hintz permit.

16 Again, site-specific storage complex  
17 formation data is -- varies between all three  
18 permits as noted here. That includes core data,  
19 log testing, things like that.

20 And the last point to make sure on Section  
21 2, Geologic Exhibits, is that the number of  
22 borehole image logs varies between all three  
23 permits.

24 Q. All right. Then let's go to Section 3,  
25 please.

1           A.     Section 3 discusses the geologic model  
2     construction and numerical simulation of CO<sub>2</sub> as  
3     Amanda had testified to previously. The same data  
4     inputs were used. Again, as described in Section  
5     2, the same model was used across all three  
6     permits. The same simulation was performed where  
7     all three well sites were simulated as injecting at  
8     the same time. You'll note here that there are  
9     minor variations in Section 3 where site-specific  
10    data is used to derive individual injection  
11    pressures, rates, temperatures and critical  
12    threshold pressure estimations. Those are the only  
13    differences of material value.

14          Q.     All right. Then we'll go -- the next row  
15    is Section 4, the Area of Review. Can you briefly  
16    discuss what's contained in that row?

17          A.     Area of review, as I testified to earlier,  
18    uses the same groundwater sampling method across  
19    all three permits. The methodology remains the  
20    same. There are site-specific differences that  
21    have to do with the number of wells based on the  
22    specific area of review and what wells exist there.  
23                 Other differences include other  
24    site-specific surface features which may include  
25    springs, mining land as I discussed previously, and

1 any legacy oil or gas wells. To note, there are no  
2 legacy oil and gas present in the TB Leingang or BK  
3 Fischer area of review. There is one KJ -- there  
4 is one legacy oil and gas well in the KJ Hintz  
5 permit as I had testified to earlier.

6 Q. I'm going to try to get some points here  
7 with the court reporter, so can you slow down just  
8 a little bit?

9 A. I thought I was.

10 Q. Let's go to the next section, Section 5.

11 A. Section 5 discusses the testing and  
12 monitoring plan. Across all three permits, leak  
13 detection plans are similar. Flowline corrosion,  
14 prevention plans are similar, and baseline testing  
15 and logging plans are similar. There are minimal  
16 differences for mechanical integrity testing across  
17 all three permits.

18 You'll note that in the TB Leingang permit  
19 the Milton Flemmer 1 will use tubing-conveyed  
20 gauges, as Jean had previously testified to in  
21 Section 9. The other two stratigraphic  
22 monitoring -- excuse me -- stratigraphic  
23 test/monitoring wells will use casing-conveyed  
24 gauges. Environmental monitoring plans, again, are  
25 site specific but the methodology remains the same.

1 Q. Okay. The next section, please.

2 A. Section 6, the Postinjection Site Care and  
3 Facility Closure Plan. The monitoring programs are  
4 similar across all three storage facility permits.  
5 There are minimal differences related to monitoring  
6 well-specific details, for example, the maximum  
7 pressures seen across each storage facility.

8 Q. All right. And then Section 7 I have  
9 labeled on my exhibit Emergency and Remedial  
10 Response Plan. Can you discuss that for us,  
11 please?

12 A. The content between all three permits is  
13 the same materially.

14 Q. Okay. And Section 8?

15 A. Again, the material content is the same  
16 and there are no -- no large differences.

17 Q. And Section 9?

18 A. All three storage facility permits abide  
19 by the same North Dakota rules and regulations,  
20 such as requiring surface casing 50 foot below the  
21 lowermost USDW and CO<sub>2</sub> resistant cement casing  
22 within the injection reservoir zones.

23 You'll note that the biggest differences  
24 are that the Milton Flemmer 1 stratigraphic test  
25 well and monitoring well was drilled deeper. It

1 was drilled to 12,000 feet. The other two wells,  
2 the Archie Erickson and the Slash Lazy H, were  
3 drilled to approximately around 6,000 feet. That  
4 would result in just differences in cementing.  
5 Some are two stages for the shorter wells and some  
6 are three stages in those completions.

7 Q. All right. Let's go to Section 10, the  
8 plugging plan.

9 A. There are no material differences in the  
10 plugging plans across all three permits. Plug  
11 placement will vary based on formation depths, you  
12 know, depending on where those formations exist  
13 within each specific wellbore.

14 Q. And Section 11, Injection Well and Storage  
15 Operations?

16 A. Again, the Milton Flemmer 1 well, since it  
17 will be using tubing-conveyed pressure gauges,  
18 tubing will be installed in the Milton Flemmer 1  
19 well. Prior to injection operations beginning in  
20 that storage facility permit in the TB Leingang,  
21 that well will be plugged back. It's currently  
22 drilled to about 12,000 feet.

23 There will be no tubing installed in  
24 either the Archie Erickson monitoring well or the  
25 Slash Lazy H monitoring well.

1           There are site-specific differences in  
2           maximum bottomhole pressures, injection amounts, et  
3           cetera, as seen in Table 11-1.

4           Q.     Okay. And Jay spent some time comparing  
5           and contrasting the financial assurance. So  
6           keeping that in mind, can you just discuss Section  
7           12 for us?

8           A.     Yeah. Jay did a great job testifying to  
9           the differences already. There are minimal  
10          differences between all three storage facility  
11          permits. The total bond amount between the three  
12          storage facility permits varies slightly, and those  
13          minimal differences are related to the cost  
14          estimates of the postinjection site care and  
15          facilities plan, and namely the number of  
16          monitoring wells at each site, the reservoir  
17          monitoring well design characteristics, flowline  
18          lengths and costs associated with endangerment of  
19          USDWs.

20          Q.     All right. Now let's spend a little time  
21          with the appendices that are attached to each one  
22          of the applications. Let's start with Appendix A.

23          A.     There are no material differences between  
24          all three permits other than they use site-specific  
25          information.

1 Q. And Appendix B?

2 A. There are, again, no material differences  
3 in Appendix B, Freshwater Well Sampling Analysis,  
4 other than the results are site specific.

5 Q. And Appendix C?

6 A. There are no material differences in  
7 Appendix C across all three storage facility  
8 permits. You'll note here that site-specific  
9 information, namely XRD data, was used to inform  
10 mineralogical compositions for injection zone and  
11 confining zones. Again, stratigraphic  
12 well-specific water ionic compositions were used  
13 and, therefore, the simulation results are site  
14 specific.

15 Q. And Appendix D?

16 A. There are no material differences between  
17 the three storage facility permits. You'll note  
18 that TB Leingang does list information for those  
19 tubing-conveyed pressure temperature gauges.

20 Q. And then finally Appendix E?

21 A. There's no material differences. The  
22 differences relate to the permits themselves.

23 MR. BENDER: Mr. Examiner, you know, I  
24 don't -- I think I'll offer the exhibit, and I  
25 don't have any other further -- I don't have any

1 further questions for Ms. Olsen.

2 HEARING EXAMINER GARNER: Any objections?

3 MR. BRAATEN: No objection.

4 HEARING EXAMINER GARNER: Exhibit is  
5 admitted.

6 You can proceed to your next witness.

7 MR. BENDER: Next witness is Wade  
8 Boeshans.

9 HEARING EXAMINER GARNER: And just a  
10 reminder, Mr. Boeshans, you're still under oath.

11 MR. BOESHANS: Yes.

12 **REDIRECT EXAMINATION**

13 **BY MR. BENDER:**

14 Q. Wade, while we're handing out the  
15 exhibits, I'm just going to have you direct your  
16 attention to what's been previously marked as  
17 Exhibit 1C-1.

18 MR. BENDER: Derrick, can you tell me when  
19 you get a copy?

20 MR. BRAATEN: Sure. Okay. I'm ready.

21 MR. BENDER: Okay. Thank you.

22 Q. (MR. BENDER CONTINUING) Wade, can you  
23 tell me what Exhibit 1C-1 is?

24 A. (BY MR. BOESHANS) It is the storage  
25 agreement for SCS3 for the KJ Hintz storage site.

1           Q.     And can you briefly describe the amendment  
2     to the Hintz storage unit that Summit is proposing  
3     with this exhibit?

4           A.     Yes.   So in this exhibit it includes an  
5     amendment in what is labeled in here as Section  
6     3.12.

7           Q.     And can you explain to the Commission  
8     staff why Summit is proposing the addition of  
9     Section 3.12 to the Hintz storage agreement?

10          A.     Yes.   So as you're aware in the -- from  
11     the previous -- or my testimony yesterday, the KJ  
12     Hintz is in proximity to the DCC facilities.  I  
13     think I mentioned yesterday -- or I did mention  
14     yesterday that approximately, you know, three miles  
15     between the storage boundary of -- storage area  
16     boundary of the KJ Hintz and the DCC West facility.  
17     And so Summit and Minnkota have been in discussions  
18     around a border agreement in terms of how we would  
19     work together to, you know, manage our storage  
20     operations or cooperate in storage operations.  And  
21     so this amendment outlines what we have agreed to  
22     in terms of general terms, and those discussions  
23     have advanced to this point.

24          Q.     It's my understanding, Wade, that the --  
25     the Hintz storage agreement already has language

1     for a border agreement -- for the parties to enter  
2     into a boarding -- border -- I'm having trouble  
3     talking here -- border agreement. Why was it  
4     necessary to add Section 3.12?

5           A.     Yeah. So you're correct in that the  
6     application or the border -- the storage agreement  
7     in the application includes border agreements.  
8     This section is specific to a border agreement  
9     between Summit SCS3 and the DCC facilities.

10           And so we thought it was prudent at this  
11     time given our discussions to lay out the general  
12     terms that we've agreed to at this point in  
13     anticipation of finalizing that border agreement of  
14     coming here, but this would set forth in essence  
15     the -- call it general terms and expectations of  
16     the border agreement which the parties have agreed  
17     to work together on. We believe it's in our best  
18     interest to do so, and so we're submitting it here  
19     today.

20           Q.     So it's Summit's request and Minnkota's  
21     request that the storage agreement for the Hintz  
22     storage facility be amended to include the language  
23     which is set forth in 3.12; is that a fair  
24     statement?

25           A.     Yes. That's correct.

1 MR. BENDER: That's all the questions I  
2 have for this witness. Offer that exhibit which is  
3 Exhibit 1C-1.

4 HEARING EXAMINER GARNER: Any objection?

5 MR. BRAATEN: I don't have an objection to  
6 the admission of the exhibit. I have an objection  
7 to the amendment itself to the application at this  
8 point given the circumstances, but not to the  
9 admission of that exhibit into the record.

10 HEARING EXAMINER GARNER: We will note  
11 your objection and admit the exhibit.

12 MR. BENDER: Mr. Examiner, we'd now like  
13 to move to Amanda Douglas. If you recall, there  
14 were some questions when we had the larger group up  
15 here that we believe Amanda can respond to. So I  
16 believe she's still sworn.

17 HEARING EXAMINER GARNER: Yeah. Just a  
18 reminder you're still under oath.

19 MS. DOUGLAS: Understood.

20 REDIRECT EXAMINATION

21 BY MR. BENDER:

22 Q. Do you want to handle it the way you did  
23 last time, Amanda, where you indicate what the  
24 question is and then respond?

25 | A. (BY MS. DOUGLAS) Yes. And DMR staff, if

1 I -- I miss any, please let me know.

2 The first question I believe that was  
3 asked and deferred was how a fracture pressure  
4 gradient influenced CO<sub>2</sub> plume size. Generally, the  
5 fracture pressure gradient is used to calculate the  
6 bottomhole pressure constraint, so 90 percent of  
7 the fracture pressure gradient is used to define  
8 the bottomhole pressure constraint as required by  
9 regulations. A higher fracture pressure gradient  
10 would result in a higher bottomhole pressure  
11 allowing for more injection of CO<sub>2</sub> which would  
12 generally result in a larger plume.

13 However, I'd like to point out in the  
14 modeling cases that we ran in the permits in  
15 Section 3, the 2100 psi wellhead pressure  
16 constraint was met prior to the bottomhole pressure  
17 constraint being met. So in this case the higher  
18 fracture pressure gradient at one of the sites is  
19 not dictating a larger plume size for the case --  
20 simulation case presented in the permit  
21 application.

22 Q. That's -- I believe that's the only  
23 question that -- oh, there's another one?

24 A. I was just pausing. Sorry.

25 Q. Oh, okay.

1           A.     Waiting for --

2           Q.     That was a long pause, so --

3           A.     Waiting for the Commission to -- to write  
4     their notes.

5                     Another question I believe -- Travis, you  
6     asked a question on stabilized plume. Could you  
7     please restate your question, or postinjection  
8     period?

9                     MR. STOLLDOERF: Oh, okay. Hang on one  
10    second. Yeah. On Figure 6-2, can you explain the  
11    CO<sub>2</sub> extent ten-year postinjection -- how that  
12    ten-year postinjection boundary was determined?  
13    It's on page 6-6 or 6, dash, 6.

14                    MS. DOUGLAS: Yep. So the simulation  
15    model was used to simulate the 20 years of  
16    injection and several years postinjection. And so  
17    the plume as labeled here is showing the CO<sub>2</sub> plume  
18    extent at ten years postinjection as determined --  
19    as predicted by that modeling simulation.

20                    MR. STOLLDOERF: Okay. What parameters are  
21    used to determine when the plume is stable -- when  
22    the plume is stabilized?

23                    MS. DOUGLAS: So plume stabilization is  
24    determined by looking at the rate of change in  
25    plume area over time. So the rate of change in the

1 plume area over time decreases, and so we used --  
2 we calculated the rate of change over one-year time  
3 steps and looked at the point in time where rate of  
4 change slowed down. And in that case the cutoff  
5 was determined to be less than two square miles of  
6 change per year in plume area, and that was used as  
7 our cutoff to determine when the CO<sub>2</sub> plume  
8 stabilized. .2 -- .2 miles, sorry, if I misstated.

9 MS. MADCHE: And that's using the  
10 5 percent saturation cutoff as well within those  
11 square footage movements?

12 MS. DOUGLAS: That's correct.

13 MR. STOLLDOERF: Thank you. That's all I  
14 had.

15 MS. DOUGLAS: So, Tammy, you asked a  
16 question about the pressure from the flowlines and  
17 the wellhead pressure used in modeling. Could you  
18 restate that question?

19 MS. MADCHE: Yes. So on Table 11-1 on  
20 page 11-2, for all three applications there's a  
21 note that maximum injection pressure during  
22 operations will be limited to surface equipment  
23 pressure ratings and the maximum bottomhole  
24 pressure constraint. In Table 11-1 and in Section  
25 3 in the model you report that you used a wellhead

1 pressure constraint of 2100 psi alongside the  
2 bottomhole pressure constraints. However, in the  
3 testing and monitoring section in Table 5-4, the  
4 flowline maximum operating pressure is listed at  
5 2183 psi along with a maximum discharge pressure of  
6 2160 psi. So my question was why those operational  
7 values on the flowline are higher than the wellhead  
8 pressure constraint that was used in the model.

9 MS. DOUGLAS: So can you restate the  
10 value? Did you say it was 2,160?

11 MS. MADCHE: 2183 for max operating  
12 pressure, 2160 for max discharge pressure.

13 MR. BENDER: Do you want to hand that off  
14 to Jamey or --

15 MS. DOUGLAS: Yes.

16 MR. BENDER: Reluctantly?

17 MS. DOUGLAS: So before Lawrence  
18 introduces Jamey, then, you guys had a question on  
19 the stoplight system and the magnitude of  
20 earthquakes used in that stoplight system. So John  
21 described 2.7 is the low value for that stoplight  
22 system. Again, that's the threshold for a felt  
23 earthquake.

24 Greater than a magnitude of 4 was chosen  
25 essentially for that next step in the stoplight

1 system. At an earthquake magnitude level 4, that's  
2 where the magnitude of the earthquake would be  
3 sufficient to -- it's generally described by the  
4 USGS as shake or rattle dishes. That's how the  
5 USGS describes it. So at that point the stoplight  
6 system states that SCS will stop injection, perform  
7 inspection on surface facilities and wells to  
8 ensure there's no damage, and then reduce  
9 operations while a detailed analysis is done to  
10 determine whether or not injection operations  
11 caused that or that could have been a natural  
12 earthquake that their monitoring array is just  
13 picking up.

14 And then over 4.5 is the cutoff for  
15 complete stop of operations and working with the  
16 regulator to determine if any changes to injection  
17 operations are needed.

18 MR. SUGGS: So why the 4.5? What's the  
19 significance of that transition?

20 MS. DOUGLAS: So as you get from 4 moving  
21 up till 5, so earthquake magnitude 5 -- as  
22 described by the USGS, at earthquake magnitude 5,  
23 that's where you might start seeing potential  
24 damages to structure, such as cracked drywall,  
25 things like that. And so 4.5 is below that 5

1 threshold to provide that safeguard to make sure  
2 that operations are shut down before any  
3 earthquakes are induced that could cause damage.

4 MR. SUGGS: Okay. Thank you.

5 MS. DOUGLAS: Were there any other  
6 questions that you recalled that were deferred?

7 MS. MADCHE: No.

8 MS. DOUGLAS: Okay.

9 MR. BENDER: We'll now call Jamey Backus,  
10 I think, who can respond to the remaining  
11 questions. Jamey will -- and Jamey has not been  
12 sworn.

13 HEARING EXAMINER GARNER: I'm going to  
14 swear him in.

15 MR. BENDER: Okay.

16 **JAMEY BACKUS,**

17 being first duly sworn, was examined and testified  
18 as follows:

19 **DIRECT EXAMINATION**

20 **BY MR. BENDER:**

21 Q. Jamey, state your full name for the  
22 record.

23 A. Jamey Backus.

24 Q. And, Jamey, I misspelled your name  
25 earlier, so will you spell your last name?

1           A.     B-a-c-k-u-s.

2           Q.     And, Jamey, by whom are you employed?

3           A.     Summit Carbon Solutions.

4           Q.     In what capacity?

5           A.     Project manager of topside facilities.

6           Q.     Okay. And can you spend just a few  
7 moments providing us with a summary of your  
8 educational background and work experience?

9           A.     Bachelor's degree in mechanical  
10 engineering. I worked at DGC for a number of  
11 years, which is the chemical plant up near Beulah,  
12 and then I also worked in coal-fired power  
13 generation in roles such as engineer, maintenance  
14 superintendent and plant manager.

15          Q.     And what are some of your duties and  
16 responsibilities with respect to your employment at  
17 Summit?

18          A.     That would be design of the topside  
19 facilities and equipment selection.

20          Q.     Okay. I don't have any other questions.  
21 He's available for the questions that -- I don't  
22 remember exactly what they were, but I think Tammy  
23 may have had a few, or do you recall the questions?

24          A.     Well, I think I can -- I'll go through all  
25 the ones I have and then let me know if I forgot

1 any.

2 So if we begin with the max pressure one  
3 that Amanda referenced, the max operating pressure  
4 of the pipe is set by thickness, flange ratings, et  
5 cetera. The maximum output pressure of the pump is  
6 set by the pump manufacturer, but we will have  
7 controls in place so that the wellhead pressure  
8 never exceeds the 2100 psi.

9 MS. MADCHE: Sounds good.

10 MR. BACKUS: Okay. The other question,  
11 the block valve where NDL-327 breaks off to  
12 NDL-325, we did not have intentions of putting a  
13 block valve there. Now, with the discussion of  
14 potentially putting a Coriolis meter there, we may  
15 revisit that, but we did not originally have  
16 intentions of putting one there because the mileage  
17 of the pipeline in that area did not require it.

18 MS. MADCHE: So I guess I would just state  
19 we would probably highly recommend it just because  
20 it gives you that extra ability to isolate between  
21 the facilities since they are owned by separate  
22 LLCs.

23 MR. BACKUS: You'd asked about location of  
24 where NDL-327 goes to 325, that is 141 North, 87  
25 West, Section 5. The terminus point is 141 North,

1 86 West, Section 5.

2 MS. MADCHE: Okay.

3 MR. BACKUS: Those were the ones that I  
4 had.

5 EXAMINATION

6 BY MS. MADCHE:

7 Q. Okay. So additional ones I have were what  
8 you anticipate the average flow rate to be for the  
9 three individual flowlines?

10 A. Yeah. So I would -- I would reference the  
11 Section 11 for each one of the applications, and  
12 our average -- average injection rate between the  
13 two wells utilizing the 2100 psi wellhead  
14 constraint, I would -- I would utilize the total of  
15 that number as to what will actually flow through  
16 the line to the -- to the well site.

17 Q. So just to confirm, you plan to maximize  
18 right up until the 2100 psi wellhead pressure  
19 constraint?

20 A. Depending on flow coming in from the  
21 capture facilities --

22 Q. Sure.

23 A. -- you know, the 16 -- I'll talk in rough  
24 numbers -- the 16 million tons that is currently  
25 slated.

1 MS. MADCHE: Okay. I'm just checking to  
2 make sure I don't have anything else here. I think  
3 that's all I have for deferred questions. I'll let  
4 anyone else go. I do have one question on the  
5 Exhibit 8B afterwards, so --

6 MR. BENDER: When you say "afterwards,"  
7 I'm sorry, I don't mean to question you, but --

8 MS. MADCHE: Anyone else in DMR that --

9 MR. BENDER: Oh, I see.

10 MS. MADCHE: -- has --

11 MR. BENDER: Okay.

12 MS. MADCHE: -- deferred questions.

13 Sorry.

14 MR. BENDER: Okay. Thank you.

15 HEARING EXAMINER GARNER: I think you can  
16 ask, Tammy.

17 Q. (MS. MADCHE CONTINUING) All right. So on  
18 Exhibit 8B, on page 5 of 6 I think there might be a  
19 typo on the KJ Hintz column under Section 12,  
20 number 2. It states, "Additional groundwater  
21 monitoring well and soil gas profile station has  
22 been added at legacy well 4942." Based on the  
23 figure in the application it's an additional Fox  
24 Hills monitoring, not a soil gas station, just to  
25 confirm. And that would be figure -- give me a

1 second.

2 A. (BY MS. OLSEN) You're correct. That's a  
3 typo. There is not a soil gas station planned near  
4 that additional legacy well. Just a Fox Hills  
5 monitoring well.

6 MS. MADCHE: Okay. Thank you.

7 HEARING EXAMINER GARNER: Well, at this  
8 time I guess we'll move to cross-examination unless  
9 there's anything else.

10 MR. BENDER: Yeah. And I will -- I'll  
11 accommodate Derrick in any way. If you would  
12 prefer the -- that other group of people that we  
13 had up a few moments ago and have -- and do your --  
14 conduct your cross-examination on those witnesses  
15 first or if you want to use this group, whatever  
16 you prefer, I'll try to accommodate you.

17 MR. BRAATEN: Give me just one moment,  
18 please. Maybe for efficiency, if you don't mind, I  
19 can just start with some of the questions I had for  
20 these witnesses and then finish that and recall any  
21 that I need that were up prior.

22 MR. BENDER: I guess I'll try not to  
23 object, but I would hope you would keep it to --

24 MR. BRAATEN: Yeah. I have questions  
25 based on this testimony.

1 MR. BENDER: On the direct we just had?

2 MR. BRAATEN: Yeah.

3 MR. BENDER: Okay. Fine.

4 **RECROSS-EXAMINATION**

5 **BY MR. BRAATEN:**

6 Q. Ms. Douglas, I think you had testified  
7 about the plume stabilization parameters and  
8 indicated that the stabilization cutoff was  
9 determined to be when less than .2 square miles of  
10 change occurred in any given year at the 5 percent  
11 saturation cutoff; do I have that right?

12 A. (BY MS. DOUGLAS) Correct.

13 Q. Did you also model -- let me start over.

14 Did you run the model to determine the  
15 total duration over which the plume would keep  
16 moving regardless of rate?

17 A. I can't recall off of the top of my head.  
18 I know we modeled it for a significant  
19 postinjection duration. I was not directly  
20 involved in determination of stabilized plume so I  
21 don't have that information readily available.

22 Q. Who made the determination for stabilized  
23 plume or who was involved with that?

24 A. Apologies, I don't have those names  
25 readily available.

1 Q. Was it people at EERC?

2 A. Yes.

3 Q. Okay. There was some discussion of the  
4 stoplight system. Why not notify DMR of events  
5 between a 4 and a 4.5?

6 A. That's not included here as written, but I  
7 think that'd be prudent to add that.

8 Q. Okay. Ms. Olsen, you testified on  
9 Exhibit 8B regarding the different depths for the  
10 three wells. Do you have an understanding as to  
11 why they drilled the three different wells to those  
12 specific depths?

13 A. (BY MS. OLSEN) Generally, yes.

14 Q. And just generally, what is your  
15 understanding?

16 A. My understanding is they were drilling the  
17 Milton Flemmer to get core data from deeper  
18 formations.

19 Q. Okay. Did they complete or are there  
20 plans to complete that at a higher interval at some  
21 point with a plug?

22 A. There are no plans, to my knowledge.

23 MR. BRAATEN: I have some questions,  
24 Lawrence, related to surface facilities, and  
25 Mr. Volk did some testifying but it sounds like

1 Mr. Backus has an understanding as well. Do you  
2 mind if I ask him the questions, and if he can't  
3 answer, we can call Jay Volk up?

4 MR. BENDER: I have no problem with that.  
5 It may save time if you just try that approach.

6 Q. (MR. BRAATEN CONTINUING) Okay.  
7 Mr. Backus, can I have you turn to the generalized  
8 flow diagram on page 5-12 of Exhibit 1A?

9 A. (BY MR. BACKUS) Okay.

10 Q. Can you describe the purpose of the  
11 blowdown which is indicated on the generalized flow  
12 diagram?

13 A. Thank you. In hopes of not getting called  
14 up, I didn't bring my glasses.

15 Oh, the blowdown on the receiver?

16 Q. Correct.

17 A. Yes. That would be for when the -- when a  
18 pig is received in there and the receiver is  
19 isolated, that blows down the pressure and CO<sub>2</sub> so  
20 that the pig can be removed and data can be  
21 retrieved from it.

22 Q. Are there emergency pressure relief valves  
23 on the system anywhere as far as what we're looking  
24 at in the generalized flow diagram?

25 A. There is a thermal relief valve, but not

1 emergency pressure relief valve.

2 Q. How do you deal with an unexpected spike  
3 in pressures coming through this system?

4 A. I think that is dealt with through  
5 controls of the pipeline pump pressure control  
6 valves to maintain pressures that are -- that can  
7 be withheld within the existing facility.

8 Q. Can you explain that a little more?

9 A. In order to have a pressure spike,  
10 something would need to do that, and a pump would  
11 be the obvious thing, and there are controls on the  
12 pump, be it vari -- variable frequency drive or  
13 just the nature of the pump that would keep it  
14 underneath of the failure pressure of the piping --  
15 or the maximum operating pressure, I should say.  
16 I'm sorry.

17 Q. Do you believe there's a 0 percent chance  
18 of pressure causing some kind of a release from the  
19 surface facilities post Midwest Carbon Express'  
20 terminus point?

21 A. I don't know that I can say there is a  
22 0 percent chance of that ever happening.

23 Q. Have you done any kind of dispersion  
24 modeling to determine the areas in which you would  
25 need to provide notice to people if you did have a

1 release in one of those sites?

2 MR. BENDER: Before you answer that  
3 question, I want to caution you that there's been  
4 some -- there's been a dispersion model that's been  
5 prepared and it's been submitted to the Public  
6 Service Commission and it's confidential. So you  
7 can answer the question, but be very careful that  
8 you don't answer it in a way that provides  
9 information with the model that was supplied to the  
10 PSC.

11 MR. BACKUS: I can say that I was not  
12 personally involved with any of the dispersion  
13 modeling that has been done.

14 MR. BRAATEN: And fair objection,  
15 Lawrence. I'm actually not trying to get into  
16 that.

17 MR. BENDER: I appreciate that.

18 Q. (MR. BRAATEN CONTINUING) But my  
19 understanding of the dispersion model with the PSC  
20 is that that relates to the main line and to that,  
21 and I'm asking just specifically if there was any  
22 dispersion modeling done post main line on the  
23 flowlines in those facilities?

24 A. I was not involved in any of that.

25 Q. Okay. And so you're not saying there

1       wasn't one done.  You're just saying you don't  
2       know?

3           A.     Yes.  That's what I'm saying.

4           Q.     Okay.  Is there -- do you know of anyone  
5       else that's testifying that would know whether or  
6       not one was done?

7           A.     You could ask Mr. Powell.

8           Q.     Okay.  If Mr. Powell didn't know, is there  
9       anyone else that would?

10          A.     He would be the one to ask that question  
11       to.

12          Q.     Okay.  What is the purpose of the thermal  
13       relief valve?

14          A.     So in cases where you can isolate a  
15       section of pipe and it would be full of CO<sub>2</sub> at  
16       pressure, if it heats up through whatever means,  
17       say the sun is shining on that pipe, the CO<sub>2</sub> will  
18       expand and this -- the thermal relief makes sure it  
19       does not exceed safe operating limits.

20          Q.     How does the thermal relief valve do that?

21          A.     More than likely it would be the type of  
22       thermal relief valve that is spring operated, so as  
23       the pressure would increase, it would relieve that  
24       and then close again.

25          Q.     Is the valve opened based on temperature

1 or pressure?

2 A. The valve would open based on pressure.

3 Q. What pressure?

4 A. I believe that number is 5 percent over  
5 maximum operating pressure.

6 Q. Wouldn't that risk a failure if the max  
7 operating pressure is based on the manufacturer's  
8 recommendations?

9 A. No, I don't believe it would. That --  
10 that is a normal thing when you talk about, say, a  
11 vessel. Normally they operate -- the pressure  
12 safety valve in that case is normally set 10  
13 percent over -- 5 to 10 percent over the operating  
14 pressure.

15 Q. And when you say "the operating pressure,"  
16 are you saying the max operating pressure as  
17 established by the manufacturer of the pipe?

18 A. I'm saying the 900-pound class standard we  
19 are working off of, that operating pressure, as set  
20 by ASME, I believe.

21 Q. Okay. Does the valve, then, close by  
22 itself automatically once it gets back down below  
23 that pressure?

24 A. It does.

25 Q. Okay. So I asked you earlier about a

1 dispersion model, but are you aware of any testing  
2 done on predicted maximum release from the line  
3 through that valve?

4 A. Because -- because of that thermal relief  
5 valve?

6 Q. Correct.

7 A. Yes, I am.

8 Q. And what -- what kind of studies were done  
9 to determine what the maximum release would be from  
10 that thermal relief valve?

11 A. It was -- a third party performed a study  
12 based on a temperature rise in that line and the  
13 thermal expansion of the CO<sub>2</sub> given the size of the  
14 line and the volume contained in, how much it would  
15 need to relieve.

16 Q. As well as the intended flow rate?

17 A. Yes.

18 Q. And operating pressure?

19 A. Yes. Well, it -- when you say flow rate,  
20 do you mean through the valve or through the line?

21 Q. I don't know.

22 A. I can say this: If that would happen, it  
23 is because everything is stopped. There is no flow  
24 through the line and valves are closed.

25 Q. Okay. Yeah, so through the valve.

1                   What was the maximum amount of CO<sub>2</sub>  
2 predicted to be released from the thermal valve in  
3 the scenario you described?

4           A.     Approximately .136 tons per minute.

5           Q.     And did they determine the maximum length  
6 of time they thought such a release would  
7 potentially occur under those parameters?

8           A.     Based on the largest segment of line that  
9 one of these exists on, I think there would be  
10 approximately three tons of CO<sub>2</sub>. That would be if  
11 you emptied the line completely, which would be  
12 highly unlikely, but that would be if you emptied  
13 the line completely.

14          Q.     So when the thermal valve is released,  
15 does that trigger other valves to stop flow in the  
16 line or do you have to manually shut that off?

17          A.     Well, as I said for -- for that to trip,  
18 that means that there is no injection going into  
19 that well. We have isolated the valves because it  
20 is only as the temperature warms up, the pressure  
21 would increase to release that. So there would be  
22 no replacement CO<sub>2</sub> coming into that line. It's  
23 simply to protect the line.

24          Q.     Okay. Do you have an understanding of how  
25 far three tons of CO<sub>2</sub> would disperse under natural

1 wind and weather conditions?

2 A. I do not.

3 Q. I'm not sure who this question is for, but  
4 I think there was some testimony about who would be  
5 operating the flowlines, so not the main line,  
6 Midwest Carbon Express, but the flowlines. Was  
7 there testimony that the flowlines would be owned  
8 by the storage facilities but operated by SCS  
9 Transport?

10 A. (BY MR. BOESHANS) That's correct.

11 Q. And when did that arrangement -- when was  
12 that arrangement decided upon?

13 A. That -- I don't know that I can give you a  
14 specific timeline in which that decision was made.

15 Q. Was it within --

16 A. I think it was generally that the intent  
17 that -- from my recollection, it was always the  
18 intent that it would be an integrated system  
19 operated -- connected with a common control system  
20 as Jamey described earlier.

21 Q. Are there any contracts signed between the  
22 various entities to formalize that relationship for  
23 operating the flowlines?

24 A. We do not have interoperating agreements  
25 in place today between the entities.

1           Q.     Or any other kinds of contracts to govern  
2     that?

3           A.     Not at this time.

4           Q.     I apologize, I'm jumping around a little  
5     now, but, Ms. Douglas, I think you had talked about  
6     this traffic light system, and under the event of  
7     greater than 4.01 one of the plans is to continue  
8     operations at a reduced rate and/or below a revised  
9     maximum operation pressure. How would you make  
10    those determinations as to how much to reduce the  
11    rate or the maximum operation pressure?

12          A.     (BY MS. DOUGLAS) At this time what's  
13    specified is injection rate would be reduced to no  
14    less than 50 percent.

15          Q.     How do you decide if it'll be 50 or 55 or  
16    60, for example?

17          A.     So as part of this stoplight system and as  
18    this traffic light system is part of this seismic  
19    monitoring, we'd be acquiring continuous seismic  
20    data. So we'd take into account not just that  
21    larger event but if there were other events, how  
22    many, their magnitude, time duration, as well as  
23    their epicenters.

24          Q.     Mr. Backus, do you know what the diameter  
25    is of the thermal valve?

1 | A. (BY MR. BACKUS) 1 inch, I believe.

2 Q. Okay. Are there any other pressure relief  
3 systems post terminus of the Midwest Carbon Express  
4 that we haven't discussed?

5 MR. BENDER: I think I'd rather have you  
6 address that question to Jimmy. He's more familiar  
7 with those things, and he'll be coming up after  
8 this.

9 MR. BRAATEN: Okay. Okay. I think that's  
10 all the questions I have for these witnesses. I  
11 have a few, I think, for Mr. Powell and Ms. --  
12 one -- well, a couple quick ones for Ms. Oddy.

13 MR. BENDER: Do you want the whole group  
14 or --

15 MR. BRAATEN: No, I think -- well, I think  
16 we can start here. I think that they may be able  
17 to answer them all.

18 MR. BENDER: Okay.

19	CROSS-EXAMINATION
----	-------------------

20 BY MR. BRAATEN:

21 Q. Ms. Oddy -- am I saying that right, Oddy?

22	A. (BY MS. ODDY) Yes. Oddy.
----	-----------------------------

23 Q. You made a reference to CO<sub>2</sub> resistant  
24 cement. Can you describe what that is?

25 | A.    Yep.    So as part of the design plan, we

1 have consulted with contractors who specialize on  
2 cementing design in the basin, and part of that is  
3 evaluating the downhole pressures and temperatures  
4 as well as the interactions between the CO<sub>2</sub> stream  
5 as well as the formation water in accordance to the  
6 regulations. And so we're not looking at your  
7 conventional oil and gas cement, primary cement.  
8 The cementing system is tailored to provide  
9 resistance to CO<sub>2</sub> with additions to different  
10 chemicals and different formulations within the  
11 cement.

12 Q. Other than the pH, are there other  
13 properties of the cement that are specific to CO<sub>2</sub>  
14 resistant cement that make it different than your  
15 regular cement used for plugging wells in the oil  
16 patch?

17 A. So -- yeah, so for both plugging as well  
18 as primary cementing in our -- in our injection  
19 wells and monitoring wells, some parameters I can  
20 name off the top of my head is the permeability  
21 would be significantly reduced in the formulation.  
22 Those -- I can't recall any other parameters. Like  
23 I said, we contracted specialized cementing  
24 contractors.

25 Q. So just as a general matter, would the

1 lower permeability in that cement result from a  
2 greater clay content?

3 A. So it would just mean that, generally  
4 speaking, there'd be less chances on interactions  
5 with, you know, potential oxidation or any chemical  
6 reactions downhole.

7 Q. What do they add to the cement to prevent  
8 oxidation or chemical reactions downhole that is  
9 different than the cement used for normal cementing  
10 or plugs in the oil patch?

11 A. I'm not privy to the specific additives by  
12 the contractor.

13 Q. Do you know if anyone at Summit or EERC  
14 is?

15 A. Again, we've contracted technical experts  
16 from a cementing company and so they would know  
17 the -- they, as in the contractor, have, you know,  
18 a proprietary formulation of the cement system, and  
19 then it would just be our responsibility to make  
20 sure that those are rated for the bottomhole  
21 pressures that we expect.

22 Q. What is the name of the contractor?

23 A. So the two commonly contracted out for  
24 carbon portfolios would be either Schlumberger or  
25 Halliburton.

1           Q.     Okay. Is there any requirement to use CO<sub>2</sub>  
2 resistant cement in these wells?

3           A.     So under Administrative Code 43-05-1-11 --  
4 this would be in my own summarization, but in the  
5 selection of casing and cement, you know, where --  
6 some of the factors that we need to take into place  
7 in the design is bottomhole pressures,  
8 temperatures, as well as the potential  
9 corrosiveness when CO<sub>2</sub> is introduced with formation  
10 water.

11          Q.     And the cement both used to cement in a  
12 casing as well as the plugs interacts with CO<sub>2</sub> in  
13 the reservoir with these wells, the injectors?

14          A.     With respect to the injection wells, yes,  
15 it would be -- yep, because it'd be isolating the  
16 injection zone. So it would -- the CO<sub>2</sub> would be  
17 going through the casing into the cement into the  
18 reservoir.

19          Q.     Did they use CO<sub>2</sub> resistant cement to cement  
20 in the casing or plug the Raymond Jensen well?

21          A.     I don't have the details of what type of  
22 grade of cement that was used in the Raymond Jensen  
23 well.

24          Q.     Why wouldn't that be as important as  
25 knowing the cement in the injector wells?

1           A.     We don't anticipate, as per Caitlin or  
2     Amanda -- I can't remember which one, but we don't  
3     anticipate the CO<sub>2</sub> plume at this time to reach the  
4     Raymond Jensen well. However, it is part of the  
5     area of review and therefore that was reviewed  
6     as -- as Caitlin testified to.

7           Q.     Okay. And the surface casing for the  
8     Raymond Jensen well is not 50 feet below the lowest  
9     USDW; right?

10          A.     I'd have to -- I'd have to refer to that  
11     diagram.

12          Q.     Would you mind taking a look?

13          A.     Oh, this is the TB Leingang.

14          Q.     You know, I might be able to speed this  
15     up. Are you confident that the depth of the casing  
16     of the Raymond Jensen is in the application?

17          A.     I do not know. I'd have to refer back to  
18     the --

19          Q.     Okay. I'll have you go ahead and look.

20          A.     Can you repeat your question, please?

21          Q.     Is the surface casing for the Raymond  
22     Jensen well 50 feet -- at least 50 feet below the  
23     lowest USDW?

24          A.     According to the diagram here, I guess I'm  
25     not sure in this area what would be considered what

1 the lowest underground source of drinking water is.

2 Q. What's the depth of the surface casing?

3 A. On the diagram it's 330 -- 330 feet.

4 Q. Okay.

5 MR. BENDER: Mr. Braaten, if you don't  
6 mind, I think Caitlin can address that question, if  
7 you want.

8 MR. BRAATEN: Oh, okay. Thank you.

9 MS. OLSEN: Can you repeat the question?  
10 Sorry.

11 Q. (MR. BRAATEN CONTINUING) Is the surface  
12 casing of the Raymond Jensen at least 50 feet below  
13 the lowest USDW?

14 A. (BY MS. OLSEN) It's not.

15 Q. Okay. When you did the model for the  
16 leaky well scenario, were you doing that based on  
17 the location of the Raymond Jensen well?

18 A. No, we did that leaky well scenario to  
19 delineate the AOR using the risk-based AOR method.

20 Q. Okay. I'm going to -- just a couple more  
21 here, and I'm not sure who this one's for, but it  
22 relates to the -- the valves in the surface  
23 facilities we discussed. And, Mr. Powell, I think  
24 these were for you.

25 But the first question is have you

1 designed that system to accommodate a situation  
2 with a blocked flow in the system?

3 A. (BY MR. POWELL) Yes. So the general flow  
4 diagram is not the piping and instrument diagram.  
5 So the thermal relief was just to relieve pressure  
6 in that bypass on that valve. So, yes, in all  
7 segments where the -- a segment could be isolated  
8 by a valve or shut in, yes, there is pressure  
9 relief in those segments.

10 As far as design pressure, the pipe is  
11 designed for 195. It's hydro tested to 125 percent  
12 of that maximum operating pressure. The valves  
13 were designed at Class 900 and bench-tested to 150  
14 percent of pressure.

15 THE REPORTER: Can I have you speak up,  
16 please?

17 MR. POWELL: Oh, sorry. I'll repeat it.

18 So as far as the design pressure of the  
19 pipeline, it's per 195 regulation and then it's  
20 hydro tested to 125 percent of the MAOP, which  
21 would be 125 percent of the 2183. The valves are  
22 designed to Class 900 and that pressure value and  
23 then they're bench-tested at 150 percent of that.

24 Q. (MR. BRAATEN CONTINUING) Why was the  
25 piping and instrumentation diagram not provided as

1 part of the application?

2 A. I can't answer that question.

3 Q. Can it be provided?

4 A. Yes.

5 Q. Rather than asking you to identify the  
6 location and size of every valve in there, would  
7 you be willing to simply provide the piping and  
8 instrumentation diagram?

9 A. Yes.

10 Q. Oh, what is the diameter of those other  
11 valves that you just discussed?

12 A. Again, we'll reference them on the piping  
13 and instrument diagram. To Jamey's testimony,  
14 they're typically 1-inch to 2-inch valves.

15 Q. But the diameter of those valves will be  
16 listed on the piping and instrumentation?

17 A. Not the diameter of the valve. The size  
18 of the valve. The valves themselves are standard,  
19 at least in my experience, but the connections to  
20 the piping, to the carrier pipe, that's typically  
21 three-quarter inch to 1 inch, but we'll have that  
22 on the P&I data.

23 Q. Okay.

24 A. And just to clarify, any relief of  
25 pressure would not be external to the pipe. It

1 would be relieved into the pipeline. So if it's --  
2 if you've got pressure relief between two  
3 segments -- a segment of the pipe that could be  
4 isolated with two closed valves, the pressure would  
5 be iso -- or relieved downstream. It would not be  
6 released to the atmosphere. So that wasn't clear  
7 from what I heard before.

8 Q. Okay. Thank you. So the only valve that  
9 would release to the atmosphere would be the  
10 temperature valve --

11 A. No. The temperature.

12 Q. -- or thermal valve? Sorry.

13 A. The thermal relief should be -- should be  
14 via tubing connected downstream. So if you have  
15 those two -- if there's pressure built up in that  
16 valve bypass, which would typically be closed in  
17 normal operation, then you could -- to Mr. Backus'  
18 testimony, you could have a thermal pressure  
19 buildup, and if that's the case, there's a set  
20 point on that valve, 110 percent, whatever it is --  
21 we'll have that set point and that should be  
22 indicated on the P&ID, at least at this point.  
23 Then when it reaches that set point, it relieves  
24 downstream of that closed valve so it relieves the  
25 pressure on that piping, that segment of piping.

1           Q.     The thermal valve releases the pressure  
2     downstream?

3           A.     That thermal relief valve relieves the  
4     pressure from that small segment of bypass piping  
5     downstream of the closed valve.

6           Q.     So it doesn't release anything to the  
7     atmosphere?

8           A.     No.   The only thing that would be released  
9     to the atmosphere is where you saw the blowdown  
10    referenced.   That would be a controlled blowdown or  
11    release to the atmosphere if that were needed for  
12    normal or abnormal operating conditions.

13          Q.     What kind of a spike in pressure would you  
14    expect if you had a valve shutdown at the wellhead?

15          A.     Again, these -- these set points -- I'll  
16    back up.

17                 I mentioned earlier in previous testimony  
18    about a surge analysis.   So that surge analysis  
19    is -- was conducted on every -- or every main line  
20    valve, including in the flowline segments, was  
21    evaluated for an inadvertent closing.   And the  
22    regulation is 110 percent of maximum operating  
23    pressure so it cannot exceed that.   And in our case  
24    I believe the maximum was 107 percent.   We can tell  
25    you exactly what the segments were in the

1 flowlines, I don't remember off the top of my head,  
2 but they were less than 110 percent.

3 Q. What was the time duration that was  
4 modeled over?

5 A. The -- the valves themselves are all  
6 actuated and have the capability to close in  
7 seconds, and we can confirm, but I believe the time  
8 frame was minutes, two to five minutes.

9 Q. So if all of your pressure relief systems  
10 relieves pressure within the line downstream and  
11 you have a valve unexpectedly shut at the wellhead,  
12 how do you relieve that pressure?

13 A. You're talking about upstream of the  
14 wellhead --

15 Q. Right.

16 A. -- to the inlet valve?

17 Q. Right. Yeah.

18 A. If it's the segment up -- well, let me  
19 back up.

20 Because there's -- remember, this is all  
21 automatically or automated or controlled by a  
22 control center, and there are -- there will be  
23 tight operating pressure boundaries. So they're  
24 continually seeing when any pressure changes may  
25 happen in a line, so -- and if -- there will be set

1 points, and I can't tell you what they are at this  
2 ten seconds, but there will be an alarm and then  
3 there will be a secondary alarm. And so the  
4 control center operator will have notification if  
5 there's a -- if there's a pressure increase, and so  
6 there will be procedures or protocol they take to  
7 relieve that pressure before there's a buildup that  
8 would overpressure any equipment, whether it's that  
9 inlet valve to the wellhead or that segment of  
10 piping. So there shouldn't be a situation even in  
11 an abnormal operating condition where that  
12 equipment will be overpressured.

13 Q. But the protocol you mention for ensuring  
14 that that doesn't get overpressured relies on human  
15 judgment?

16 A. No. There will be an automatic -- or you  
17 can't have automatic set points, but, yes, the  
18 first -- the first response would be from an  
19 individual in the control center. That's correct.  
20 Per procedures on what to do in a what-if  
21 situation.

22 Q. Will there be protocols provided to the  
23 DMR or any regulatory bodies with respect to the  
24 decision tree for the person making that decision?

25 A. Those will be in the standard operating

1 procedures. So I'm not -- I don't have the  
2 experience with the DMR to see if that's something  
3 that they are -- that they want to audit or  
4 interested in reviewing. If they do, they would be  
5 available. They're not confidential or will not be  
6 confidential.

7 Let me clarify. We're not going to  
8 publish them on the website, but if a regulatory  
9 body wants to see our operating procedures,  
10 absolutely.

11 Q. Mr. Powell, were you here during my  
12 questioning of, I believe, Ms. Douglas when I was  
13 asking about what Summit would do if after, for  
14 example, the five-year review you determined that  
15 you needed to change the boundaries of the storage  
16 facility and then my questions following that were  
17 about how you would allocate compensation in that  
18 event? Did you -- were you here during that  
19 testimony?

20 A. I was.

21 Q. So let's just take as a hypothetical a  
22 situation where Summit makes the determination  
23 after five years that the data on the ground  
24 justifies adjusting those storage facility  
25 boundaries. What is Summit's plan with respect to

1       how to adjust the compensation to the landowners  
2       that has been paid up until that point?

3           A.     I don't have that knowledge of how the --  
4       how the compensation may or may not be adjusted to  
5       landowners.

6           Q.     Is there anyone else in the company that  
7       would have that knowledge?

8           A.     I'll defer to Mr. Boeshans.

9           Q.     Okay.

10           MR. BRAATEN: I'm not trying to get out of  
11       order, Lawrence, but do you mind -- this is like  
12       right near the end. Do you mind if we have  
13       Mr. Boeshans come up?

14           MR. BENDER: If you're getting close to  
15       the end, I don't have any problem with that.

16           Q.     (MR. BRAATEN CONTINUING) Mr. Boeshans, do  
17       you have an under -- well, I'll just start over.

18                   In the hypothetical scenario that five  
19       years down the road Summit determines that it wants  
20       to adjust the boundary of the storage facility  
21       based on the data it gets from its monitoring  
22       activities, how would it allocate or reallocate  
23       payments already made to the owners in the storage  
24       facility?

25           A.     (BY MR. BOESHANS) So in that situation,

1     what I would see is, you know, it's an it-depends  
2     answer. It depends on what the adjustment is to  
3     the boundary. And then if we were going to make an  
4     adjustment to the boundary, it would be -- you  
5     know, be decided, you know, by hearing like this  
6     with the Commission because that would be a major  
7     modification to the permit.

8             And so at that time we would have more  
9     information around what the change is, the  
10    adjustment is, how much -- how long it's been  
11    operated and have a -- probably have -- we'd have a  
12    recommendation in terms of how to do that. We  
13    don't have a plan exactly today in terms of how  
14    that would happen.

15            Q.     If you expand the storage facility after  
16    five years, the boundary of the -- I'm going to  
17    start over.

18                   If Summit were to make a major  
19    modification and expand the border of the storage  
20    facility through a hearing with the DMR, would you  
21    agree that you need to pay the new owners now being  
22    included in the storage facility for prior  
23    injections?

24                   MR. BENDER: I'm going to object because I  
25    think you're asking for a legal conclusion.

1 MR. BRAATEN: That's fair.

2 Q. (MR. BRAATEN CONTINUING) But what I'm  
3 actually asking is what Summit's opinion would be  
4 on that issue. Not whether they need to, just  
5 whether you would.

6 A. So you're asking me if there was an  
7 adjustment -- your situation, if there was an  
8 adjustment after five years and we had been  
9 injecting, would we pay the landowners that were  
10 added to the unit?

11 Q. For the past injections.

12 A. For the past injections. I don't know  
13 that I can answer that. It's a -- I think you'd  
14 have to understand more about that situation, what  
15 led to the changing of the units.

16 Q. What more do you want to understand? What  
17 information are you missing to make the  
18 determination?

19 A. Well, I'm missing the historical operation  
20 and what led to the need for a change.

21 Q. Well, let's presume -- sorry. This was  
22 implied, but I should be explicit. You're going to  
23 change the size of the storage facility because  
24 you've determined that it was inaccurate and that  
25 the plume is going to move further than you

1 originally anticipated such that you need to expand  
2 the boundary of the storage facility.

3 MR. BENDER: And I'm going to object.  
4 You've asked that question previously in a little  
5 bit different manner and he said he needs to know  
6 more information before he can answer the  
7 question -- answer the question. So I'm going to  
8 object.

9 HEARING EXAMINER GARNER: I'm going to let  
10 him answer if he knows.

11 MR. BOESHANS: I don't know.

12 Q. (MR. BRAATEN CONTINUING) You don't know  
13 what?

14 A. I don't know the answer to your question  
15 right now.

16 Q. So Summit won't make a commitment to pay  
17 owners added into an expanded storage facility for  
18 prior injections?

19 MR. BENDER: Objection. Asked and  
20 answered.

21 HEARING EXAMINER GARNER: Sustained.

22 Q. (MR. BRAATEN CONTINUING) Was the answer  
23 no?

24 MR. BENDER: He said he didn't know.

25 Q. (MR. BRAATEN CONTINUING) Okay. But if

1     you don't know whether or not Summit will make a  
2     commitment to do that, then the answer is that  
3     they're not making a commitment right now to do  
4     that; right?

5             MR. BENDER:  Objection.  I mean, we've  
6     covered this ground now three times.

7             HEARING EXAMINER GARNER:  Sustained.

8             Q.     (MR. BRAATEN CONTINUING)  Does anyone at  
9     Summit know the answer to that question?

10            MR. BENDER:  Objection.

11            MR. BRAATEN:  What's the objection?

12            HEARING EXAMINER GARNER:  He can -- he can  
13     answer that one.

14            MR. BOESHANS:  I don't know.  It's not a  
15     question that I've raised with anybody at Summit.

16            Q.     (MR. BRAATEN CONTINUING)  Has anyone else  
17     at Summit raised the question with you or anyone  
18     else that you're aware of?

19            A.     Not that I'm aware of.

20            Q.     I apologize if someone did ask this, but  
21     there was a question earlier -- Mr. Powell, I think  
22     it might have been deferred to you, but -- or  
23     Mr. Boeshans -- with respect to the payments being  
24     made to landowners on the CO<sub>2</sub> stream, is that -- are  
25     those payments being made based on the full stream

1 or the actual CO<sub>2</sub> mass in the stream?

2 MR. BENDER: I'm going to object. You  
3 seem to be using the past tense. You said that we  
4 have paid or am I misunderstanding you?

5 MR. BRAATEN: Well, I can -- I'll just  
6 change it to avoid that.

7 MR. BENDER: Okay.

8 MR. BRAATEN: I see what you're saying.

9 Q. (MR. BRAATEN CONTINUING) So when you go  
10 to pay landowners for injections, is it your intent  
11 to pay based on the full stream of substances  
12 injected or the CO<sub>2</sub> mass in the stream?

13 A. The intent is to pay on the -- the full  
14 stream as it's defined in the storage agreement --

15 Q. Okay.

16 A. -- which is associated substances.

17 MR. BRAATEN: Okay. No further questions.

18 HEARING EXAMINER GARNER: I believe the  
19 staff might have some questions. Already answered?

20 Okay. Lawrence, any further witnesses?

21 MR. BENDER: Not at this time.

22 HEARING EXAMINER GARNER: Okay.

23 MR. BRAATEN: Could we take a break?

24 HEARING EXAMINER GARNER: Take a break  
25 before you call?

1 MR. BRAATEN: Yeah.

2 HEARING EXAMINER GARNER: Sure. Take a  
3 ten-minute break.

4 (Recessed at 4:42 p.m. and reconvened at  
5 4:59 p.m.)

6 HEARING EXAMINER GARNER: We are back on  
7 the record. Attorney Braaten, you can proceed with  
8 your first witness.

9 MR. BRAATEN: All right. We are calling  
10 Shane Bofto to appear by phone. Shane, can you  
11 hear me okay?

12 MR. BOFTO: I can hear you.

13 HEARING EXAMINER GARNER: Okay. Let me  
14 swear him in real quick.

15 MR. BRAATEN: Okay. Shane, the hearing  
16 examiner is going to swear you in.

17 **SHANE BOFTO,**  
18 being first duly sworn, was examined and testified  
19 as follows:

20 **DIRECT EXAMINATION**

21 **BY MR. BRAATEN:**

22 Q. Shane, can you state your full name and  
23 spell your last name for us?

24 A. My name is Shane Bofto. Last name is  
25 B-o-f-t-o.

1 Q. And by whom are you employed?

2 A. HydroSolutions, Incorporated.

3 Q. And just generally speaking, what kind of  
4 company is HydroSolutions, Incorporated?

5 A. We're a services, disabled veteran-owned,  
6 small business associated with consulting and  
7 environmental and water resources.

8 Q. Okay. Can you describe your educational  
9 background, please?

10 A. Sure. I have a bachelor of science in  
11 chemical engineering from Montana State University  
12 and an M.B.A. from the University of Mary in  
13 Bismarck.

14 Q. And can you give us a description of your  
15 professional experience from college up until you  
16 began with HydroSolutions?

17 A. Sure. I initially out of college worked  
18 at a petroleum refinery in the environmental health  
19 and safety department. I then went to work out in  
20 Seattle where I focused on mining internationally,  
21 consulting primarily in water quality, acid rock  
22 drainage and treatment.

23 Following that, I moved back to Montana  
24 and was a general environmental engineering  
25 consultant and went through several companies till

1 I ended up here at HydroSolutions.

2 Q. And approximately how long have you been  
3 working at HydroSolutions?

4 A. Since -- since 2004.

5 Q. And can I have you pull up Exhibit No.  
6 LO-56, Shane?

7 A. I have it.

8 MR. BENDER: Can you just give me a minute  
9 to get there?

10 MR. BRAATEN: It's his résumé.

11 MR. BENDER: Okay. I'm there. Thank you.

12 Q. (MR. BRAATEN CONTINUING) Does this  
13 curriculum vitae accurately reflect your  
14 educational and professional qualifications and  
15 experience, Mr. Bofto?

16 A. Yes, it does.

17 MR. BRAATEN: Move to admit Exhibit LO-56.

18 HEARING EXAMINER GARNER: Any objections?

19 MR. BENDER: No objection.

20 HEARING EXAMINER GARNER: Motion granted.

21 Q. (MR. BRAATEN CONTINUING) And, Shane, can  
22 you describe for us with respect to your work at  
23 HydroSolutions the kinds of clients and the kinds  
24 of work that you've been involved in?

25 A. At HydroSolutions, clients mainly consist

1 of private individuals, ag and ranching clients,  
2 federal, state and local governments and  
3 municipalities. We have a GSA contract with the  
4 federal government. We work with developers,  
5 conservation groups and other NGOs and then  
6 companies including mining, oil and gas pipelines,  
7 and we also work with attorneys.

8 Q. And as a general matter, you mentioned  
9 environmental consulting services, but can you give  
10 us just some specific examples of the kinds of  
11 projects and the kinds of consult -- different  
12 kinds of consulting work that the folks at  
13 HydroSolutions do?

14 A. Generally, we provide independent services  
15 and environmental engineering, hydrogeology,  
16 remedial investigations, remediation, permitting,  
17 water resource development, compliance, due  
18 diligence, environmental impact statements and  
19 expert work.

20 Q. And, Mr. Bofto, are you familiar with the  
21 applications and the Class VI well permit  
22 applications that bring us to the hearing today?

23 A. Yes, I've briefly reviewed them.

24 Q. And do you have any -- we've talked  
25 generally about the experience of HydroSolutions

1     and your experience. Do you have any experience on  
2     particular or specific projects that you think  
3     informs your ability to work on -- or work in this  
4     proceeding or on this matter?

5           A.     Yes. Several projects come to mind. In  
6     2011, the Wyoming Land Quality Division issued an  
7     RFP that resulted in a competitive bid, and  
8     HydroSolutions was hired where I was the project  
9     manager to look at mining regulations in Wyoming,  
10    specifically with respect to rare earth elements in  
11    mining. And we reviewed all of the regulations and  
12    permitting process with respect to Wyoming and  
13    implications of kind of a different mining type  
14    that the state wasn't used to seeing. It was out  
15    of the ordinary.

16           And following that, the Montana Board of  
17    Oil and Gas Conservation issued an RFP and we were  
18    awarded that to explore primacy for the Class VI  
19    program in 2014. They were looking at setting up a  
20    program and reviewing it as an exploratory project  
21    to see if they wanted to gain primacy, and this was  
22    about the time -- a little after the time North  
23    Dakota did that same pursuit, so we followed it  
24    very closely.

25           Q.     And so did Montana end up submitting an

1 application to obtain primacy for its Class VI  
2 program?

3 A. We provided the State with a draft program  
4 and we went back and forth with them, and  
5 ultimately they had an administrative decision at  
6 that time to not submit for primacy.

7 Q. And as you were working on the -- drafting  
8 the Class VI program for Montana, did you review  
9 any documents or guidance that informed your  
10 understanding of how to develop a Class VI program?

11 A. Yes. I heavily relied on a lot of BPA  
12 documents. Specifically for the Class VI program,  
13 there were a lot of guidance documents associated  
14 with implementing programs, well characterization,  
15 area of review, recordkeeping, to name a few.

16 Q. Can I have you turn to Exhibit LO-18?

17 A. I have it.

18 Q. Is this one of the guidance documents you  
19 just referenced that helped inform your  
20 understanding of the Class VI program while you  
21 were drafting Montana's regulations?

22 A. Yes, it was one of the documents I used to  
23 understand and outline our draft program.

24 Q. And can you just describe briefly the  
25 topic of this guidance?

1           A.     Sure. The guidance generally provides  
2 information regarding modeling and recommendations  
3 for delineating the area of review. It also  
4 describes the circumstances under which the AOR or  
5 area of review is to be reevaluated, and also  
6 describes how to perform an AOR reevaluation and  
7 development of corrective actions.

8           Q.     Okay. Let me have you turn to  
9 Exhibit LO-19.

10          A.     All right. I have it.

11          Q.     Is this also one of the documents you  
12 referenced that you reviewed to inform your  
13 understanding of Class VI regulatory regimes?

14          A.     Yes, it was one of the documents I used to  
15 understand and so outline the draft program.

16          Q.     And can you just describe generally what  
17 the topic of this document is and what it covers?

18          A.     It provided a basic framework for the  
19 permitting process and the required activities  
20 through the Class VI injection well and activities  
21 associated with that.

22          Q.     Okay. Can I have you turn to  
23 Exhibit LO-20?

24          A.     I have it up.

25          Q.     Is this also one of the guidance documents

1     you referenced a moment ago that informed your  
2     understanding of the Class VI well program when you  
3     were drafting Montana's regulations?

4             A.     Yes.   I used it similar to the others.

5             Q.     Okay.   And just generally speaking, what  
6     does this guidance document cover topically?

7             A.     I would say it provides a general outline  
8     of the data to be collected and how to use the data  
9     to identify potential risks and eliminate  
10    unacceptable sites.   It also provides information  
11    for inputs into whatever geologic model is chosen  
12    for use to evaluate any geological modeling.

13            Q.     Okay.   And now I'm going to have you --  
14    it's marked a little out of order here, but there's  
15    an Exhibit LO-82.   I'll have you switch -- or flip  
16    to Exhibit LO-82.

17            MR. BRAATEN:   And, Lawrence this one  
18    didn't get into the binder.   I've got an extra  
19    copy.

20            MR. BOFTO:   Okay.   I'm pulling it up.  
21    Yes, I have this one.

22            Q.     (MR. BRAATEN CONTINUING)   I'm sorry,  
23    Mr. Bofto, I might have missed it.   Did you get  
24    yourself to that exhibit?

25            A.     Yes, I have -- have that exhibit, the one

1 for recordkeeping and reporting, generally.

2 Q. And specifically Exhibit 82 that indicates  
3 it's the Underground Injection Control Program  
4 Class VI Well Recordkeeping, Reporting, and Data  
5 Management Guidance for Owners and Operators. Is  
6 that the exhibit you have up?

7 A. Yes.

8 Q. Okay. Is this also one of the guidance  
9 documents that you reviewed that informs your  
10 understanding of the Class VI program that you used  
11 in developing Montana's regulation?

12 A. Yes.

13 Q. Okay.

14 MR. BRAATEN: Move to admit Exhibits 18,  
15 19, 20 and 82.

16 HEARING EXAMINER GARNER: Any objections?

17 MR. BENDER: No objection.

18 HEARING EXAMINER GARNER: Exhibits are  
19 admitted.

20 Q. (MR. BRAATEN CONTINUING) Mr. Bofto, can I  
21 have you now open up -- or turn to Exhibit No. 21?

22 A. I have that up.

23 Q. Do you have an understanding of what the  
24 first two sentences of this data tool mean?

25 A. Yes.

1 Q. And can you tell us what that is?

2 A. Under the rule that's cited there, that  
3 the owners and operators must submit the project  
4 information -- their geological sequestration  
5 project information directly to the EPA and I take  
6 it through the geologic sequestration data tool in  
7 that this requirement applies regardless of  
8 primacy, whether it's still EPA or a particular  
9 state or entity has primacy.

10 Q. Mr. Bofto, are you ready, willing and able  
11 and have you been ready, willing and able for the  
12 past three weeks to assist in running and analyzing  
13 models related to these Class VI well applications  
14 had you received data and input files to do so?

15 A. I'm capable and ready to run the  
16 geochemical model PHREEQ, given that if I had the  
17 input files and the right thermal dynamic database  
18 or a reference to it if -- if the reference one  
19 that comes with the model, is unaltered.

20 MR. BRAATEN: No further questions.

21 HEARING EXAMINER GARNER: Mr. Bender, any  
22 questions?

23 MR. BENDER: Yeah, I do.

24

25

**CROSS-EXAMINATION**

**BY MR. BENDER:**

Q. Mr. Bofoto [sic], my name is Lawrence Bender and I represent the applicant, Summit, in this case. Nice to meet you today.

A. Nice to meet you.

Q. Okay.

A. My name is Bofto.

Q. Okay. Thank you for correcting me. I appreciate that. Do you mind if I call --

A. No problem.

Q. Do you mind if I call you Shane?

A. Please do.

Q. Okay. Thank you. I want to just delve a bit into your discussion about what you did for the State of Montana. First of all, what was the time period in which you were working on that? I think you said it was about the time that North Dakota was adopting its rules, but I want to make sure that I understood that correctly.

A. Yes. I believe I started it in 2012, but a lot of these documents that I had just referenced were in draft form, so a lot of it we waited for the final versions of the EPA guidance documents to be issued. And I believe my last final draft was

1 submitted to the Board of Oil and Gas following  
2 discussions with them in mid to late 2014.

3 Q. Okay. And when you -- when you referred  
4 to these documents were in draft form, I'm sure  
5 you're talking about Exhibits LO-18, 19 -- let's  
6 see here -- looks like 20 and is it 83?

7 MR. BRAATEN: 82.

8 Q. (MR. BENDER CONTINUING) 82. Is that  
9 correct?

10 A. They may have included some of those, but  
11 there were also some other guidance documents and  
12 some of the things I'm trying to recall with the  
13 environmental justice, bonding, things like that.  
14 So that was why we waited a little while longer so  
15 we could work with final documents that were  
16 included. I think they're currently included on  
17 EPA's Class VI website.

18 Q. And what was it that you were requested to  
19 do by the Montana Oil and Gas Conservation  
20 Commission?

21 A. To review that type of information and  
22 draft a program that the State could use for their  
23 primacy application should they desire to go after  
24 primacy for the Class VI program.

25 Q. And were involved in drafting the statutes

1       that were necessary for the Montana Board of Oil  
2       and Gas to adopt the rules or were you -- was that  
3       statutory enactment already in place and all you  
4       were asked to do was prepare the regulations?

5           A.     I was asked -- I was not involved with the  
6       statutes or anything like that. I was just  
7       involved with gathering information that the board  
8       needed to get the primacy application in place.

9           Q.     Are the statutes already in place in  
10      Montana and that all they're lacking at this point  
11      in time is the regulations?

12          A.     I believe at that time there was a statute  
13      associated with it that was in place.

14          Q.     Okay.

15          A.     It's been a while, but I seem to recall it  
16      was in place prior to them issuing approval for us  
17      to do this work.

18          Q.     Okay. And I believe you said you started  
19      in 2012, probably finished in 2014; is that  
20      correct?

21          A.     That sounds about right.

22          Q.     Okay. Approximately -- well, strike that.  
23                  During that period of time, were you  
24      working full-time on this project?

25          A.     No.

1           Q.     Okay.  Were you working on the project by  
2 yourself?

3           A.     No.  I was part of a team of other  
4 consultants and internal people.  We had an  
5 attorney because there was a portion where we had  
6 to draft a letter from I believe the attorney  
7 general or something to EPA and there were several  
8 other documents that needed to be drafted that were  
9 best suited for an attorney.  And I had another  
10 company that had petroleum engineers and petroleum  
11 geologists associated that were reviewing some of  
12 the draft documents at that time as well.

13          Q.     Okay.  Well, thank you for that.  I had  
14 misunderstood your testimony.  I thought that you  
15 were primarily responsible for doing all the work.  
16 But since it was a team, let me ask you a couple  
17 questions about that.  What were -- what were your  
18 specific responsibilities on that team?

19          A.     I was the project manager, and areas -- I  
20 would collect information as well as derive  
21 information that I could and I put them into the  
22 draft program.  I took and I followed a lot of the  
23 guidance to establish, you know, a general  
24 procedure for permitting.

25          Q.     And did you ultimately draft some rules

1       that were submitted to the Oil and Gas Conservation  
2       Commission?

3           A.     Not at that time.

4           Q.     When you say "not at that time," you're  
5       talking about the period from 2012 to 2014?

6           A.     I'm talking -- well, I never drafted any  
7       rules based on the draft program.

8           Q.     Okay. I misunderstood you then. I -- I  
9       had understood you to testify when Mr. Braaten was  
10      asking you questions that you drafted the rules but  
11      the -- the board ultimately made a decision that it  
12      was not going to adopt the rules. Did I  
13      misunderstand?

14          A.     I drafted a permitting program for  
15      somebody that we could run past EPA so someone  
16      could get a permit for a Class VI well should  
17      Montana get primacy.

18          Q.     Okay.

19          A.     Does that make sense?

20          Q.     I think so.

21                 Do you know why the board never went  
22      forward with the rules?

23          A.     No, that was an administrative decision  
24      far above my pay grade.

25          Q.     Okay. Let's talk a little bit more about

1     your experience.  You've explained to us that as a  
2     result of reviewing these guidance documents that  
3     have now been entered into the record, I think it  
4     was 17, 18, 19, 20 and also 82, you were involved  
5     in this project.  Have you ever been involved in  
6     making application in a state that has primacy for  
7     a Class VI permit?

8             A.     No.

9             Q.     Okay.  You haven't been -- I apologize.  I  
10     wasn't listening to my question very well when I  
11     asked it.  Did I -- well, let me rephrase it.

12             Have you ever been involved in any way in  
13     making a Class VI application to a state that has  
14     primacy?

15             A.     No.

16             Q.     Okay.  Have you ever reviewed an  
17     application, other than the one before the  
18     Commission -- or the ones that are before the  
19     Commission today, for a Class VI permit?

20             A.     I'm trying to recall.  I may have looked  
21     at some when I was drafting a program.  I have a  
22     faint recollection that I tried to look at others  
23     that had gone through EPA at the time.  I just  
24     cannot recall the specifics.

25             Q.     Yeah.  And I apologize, I think I said

1     this, but I asked -- my question was specific to  
2     being involved in an application with a state that  
3     had primacy.

4           A.     None with a state that had primacy.

5           Q.     Other than the applications that are  
6     before the Commission today, have you ever reviewed  
7     an application for a Class VI well?

8           A.     Back to my previous statement, I believe I  
9     did when I was drafting the program to look at what  
10    an application looks like. I just don't recall  
11    because it was so long ago on what it was.

12          Q.     That would have been back in the 2012  
13    period, 2014 period; is that right?

14          A.     Somewhere in there.

15          Q.     And would those have been applications  
16    before the EPA?

17          A.     Yes.

18          Q.     Okay. When were you hired by the  
19    intervenors in this case?

20          A.     Oh, it's been a month or so.

21          Q.     Okay. You don't know the exact date? I  
22    mean, today is the 11th. Would it have been  
23    probably May 11?

24          A.     It could have been about that time, but I  
25    don't know specifics.

1           Q.     What were you asked to do on May -- on  
2     May 11?

3           MR. BRAATEN:   I'm going to object to that  
4     characterization of testimony.  I don't believe he  
5     testified to doing something on the 11th.

6           HEARING EXAMINER GARNER:  Overruled.

7           Q.     (MR. BENDER CONTINUING)  Okay.  What --  
8     okay.  I guess you can answer the question.

9           A.     What was I -- could you repeat that  
10    question again?

11          Q.     What were you asked to do when you were  
12    hired for this project?

13          MR. BRAATEN:   I'm going to object to  
14    questions eliciting communications between me and  
15    the experts.

16          HEARING EXAMINER GARNER:  Overruled.

17          MR. BRAATEN:   You can go ahead, Shane.

18          MR. BOFTO:   Oh, okay.  Just to provide my  
19    experience with the Class VI guidance and programs  
20    that I had early on and just my general  
21    environmental background information.

22          Q.     (MR. BENDER CONTINUING)  And how many  
23    hours do you believe you've worked on this project  
24    since you were retained?

25          A.     Outside of this, probably 15 reviewing

1 documents and such and --

2 Q. And have you had an opportunity to review  
3 each one of the -- what I'm going to refer to as  
4 the final form of applications for the three  
5 applications that are before the Commission?

6 A. I've generally reviewed them, yes, and --  
7 I'm trying to think if I've done any others. So  
8 I'd say I generally reviewed the three  
9 applications.

10 Q. Okay. And when you say reviewed them, did  
11 you just -- did you just read them or did you do  
12 anything beyond reading? Did you do any  
13 independent research?

14 A. I looked closely at some of the models on  
15 what were being used and what they did exactly.

16 Q. Okay. And if I -- and please correct me  
17 if I'm wrong, Shane, but I understood your  
18 testimony when Mr. Braaten was asking you some  
19 questions that you -- if you'd had the materials  
20 that he requested from the Industrial Commission,  
21 you could have run a model in a relatively short  
22 period of time. Was that your testimony?

23 A. Yes. I specifically referenced the  
24 PHREEQC model by U -- that is put out by the USGS.

25 Q. Okay. And do you have the necessary

1 software packages that you would need to run the  
2 model?

3 A. Yes, I do. It's on my computer now.

4 Q. Okay. Can you tell me what some of those  
5 programs are?

6 A. I'm specifically talking about the PHREEQC  
7 model. It's downloaded freely from the USGS, and I  
8 have routinely used the program through my career  
9 and have used it to write specific reports.

10 Q. And do you believe that that's the only  
11 software you would need to analyze the information  
12 that Summit has filed with the Industrial  
13 Commission on this matter?

14 A. It's the only one that I'm focused on.

15 Q. Okay. Do you agree with me that there are  
16 other software programs?

17 MR. BRAATEN: I'm going to object to the  
18 form of the question.

19 MR. BENDER: What's that?

20 MR. BRAATEN: I object to the form of the  
21 question. There are.

22 MR. BENDER: Well, let him answer.

23 HEARING EXAMINER GARNER: If he can  
24 understand it, he can answer it.

25 MR. BOFTO: There are numerous geochemical

1 models outside of PHREEQ. There's Geochem  
2 Workbench® that I've used and several others, but  
3 the application specifically said they used PHREEQC  
4 and that was the one I was focused on.

5 Q. (MR. BENDER CONTINUING) But you don't  
6 know if this PHREEQC is the only program that would  
7 be necessary to evaluate the information that's  
8 been supplied to the Commission, do you?

9 MR. BRAATEN: For the --

10 MR. BOFTO: I'm just going off the  
11 application that said that was the program that  
12 they used.

13 Q. (MR. BENDER CONTINUING) Okay.

14 A. I did not see any other geochemical  
15 programs to evaluate the upper and lower confining  
16 units.

17 Q. Okay. Tell me a little bit about your  
18 experience working in North Dakota. I know you  
19 said you went to the University of Mary. Have you  
20 done any work in your current role with -- I  
21 believe it's HydroSolutions. Have you worked in  
22 North Dakota with that company?

23 A. Yes. I've had probably -- probably six or  
24 seven projects in the last ten years in North  
25 Dakota.

1           Q.     What were those projects?

2           A.     Some of them were work with attorneys for  
3     oil and gas impacted sites. Done some incidental  
4     air quality work there from facilities. Trying to  
5     think. Looked at different reviewing remediation  
6     plans for cleanup for saline impacts or produced  
7     water impacts.

8           Q.     Okay. So it sounds to me, and please  
9     correct me if I'm wrong, that most of that work  
10    that you've done in North Dakota has been from the  
11    standpoint of surface issues; is that a -- is that  
12    a fair statement?

13          A.     No. There's been other issues associated  
14    with contaminated groundwater and cleanup.

15          Q.     Okay. Have you ever been involved in  
16    North Dakota in making application to the  
17    Commission relative to saltwater disposal wells or  
18    Class II wells?

19          A.     I've been part of such projects exploring  
20    commercial Class II saltwater disposal wells.

21          Q.     Ever prepare an application to the  
22    Commission for a saltwater disposal well?

23          A.     I've provided information for somebody  
24    else to submit a Class II application.

25          Q.     Okay. What sort of information did you

1 supply?

2 A. Looked at things like deriving maximum  
3 pressure at the wellhead. Working with other  
4 geologists in my company, suitable formations.  
5 Looking at areas of review for other wells that  
6 could be within the area of review, things along  
7 that line.

8 Q. But you never were involved in a saltwater  
9 disposal application in North Dakota where you were  
10 the lead individual in making that application;  
11 isn't that correct?

12 A. That'd be fair to say.

13 MR. BENDER: No further questions.

14 HEARING EXAMINER GARNER: Any questions  
15 from the staff? Any redirect, Mr. Braaten? Oh,  
16 I'm sorry, you do.

17 **EXAMINATION**

18 **BY MR. HELMS:**

19 Q. Shane, this is Lynn Helms with the  
20 Industrial Commission. Nice to meet you, maybe  
21 some day face-to-face.

22 A. Nice to meet you.

23 Q. Yes.

24 North Dakota made its application for  
25 Class VI primacy on June 21 of 2013 and received

1 final approval April 24 of 2018. Shane, did you  
2 comment on North Dakota's application?

3 A. No, I did not.

4 Q. Did you review the North Dakota documents  
5 when you were preparing Montana's prospective  
6 documents?

7 A. I seem to recall that we were following at  
8 that time whether North Dakota was going to draft  
9 their own specific rules or adopt it by rule, and  
10 that was -- we had a lot of discussions about that  
11 on whether Montana should or shouldn't, and I seem  
12 to recall North Dakota going back and forth maybe  
13 once on what the appropriate action was, and we  
14 were going to try to learn at that point from you.

15 MR. HELMS: Okay. Thank you.

16 **REDIRECT EXAMINATION**

17 **BY MR. BRAATEN:**

18 Q. Mr. Bofto, do you have a copy of -- well,  
19 do you recall signing an engagement letter for this  
20 matter?

21 A. Yes.

22 Q. And do you recall the date of that?

23 A. May 1.

24 MR. BRAATEN: Okay. No further questions.

25 HEARING EXAMINER GARNER: Okay. You can

1 call your next witness. Can I get the name?

2 MR. BRAATEN: Ted Doughty.

3 HEARING EXAMINER GARNER: Doughty. Okay.

4 MR. BRAATEN: Yeah.

5 MS. ZASTE: He has a first initial, P, but  
6 he goes by Ted. So it's P. Ted Doughty.

7 HEARING EXAMINER GARNER: Gotcha.

8 MR. BRAATEN: Mr. Doughty, we're getting  
9 some feedback from you. Can you mute -- well, no,  
10 we're still getting feedback. Can you mute -- what  
11 was it -- what did you -- okay.

12 P. TED DOUGHTY,  
13 being first duly sworn, was examined and testified  
14 as follows:

15 DIRECT EXAMINATION

16 BY MR. BRAATEN:

17 Q. Mr. Doughty, can you state your full name  
18 and spell your last name for us, please?

19 A. It's Paul Ted Doughty, D-o-u-g-h-t-y.

20 Q. And you go by Ted; right?

21 A. Yes, I do.

22 Q. Okay. Can you tell me briefly your  
23 educational background?

24 A. I have a bachelor's in geology from  
25 Washington University in St. Louis, a master's in

1 geophysics from the University of Montana, and a  
2 PhD from Queen's University in Ontario, Canada.

3 Q. And can you start by just briefly  
4 describing your professional background?

5 A. Yes, sir. So I've worked with Exxon -- I  
6 worked in the Exxon research lab for four years in  
7 the late '90s. I taught at Eastern Washington  
8 University for eight years as a professor. And  
9 since 2008 I've been a consultant on my own working  
10 for various companies like Talisman Energy,  
11 Halliburton, various other companies in the  
12 Rockies.

13 Q. Can you tell us a little bit about the  
14 kinds of work you did with your time at Exxon?

15 A. Yes. So at Exxon I was in the fault --  
16 fault seal group, also did -- which is analyzing  
17 how fault seal in the various environments in  
18 the -- in the -- we did a whole research project  
19 looking at fault seal across the entire -- all the  
20 basins that Exxon worked in.

21 I also did 3D seismic interpretation in  
22 various basins across the world. Did a lot of  
23 field research on the Bakken and various other  
24 groups in the western U.S. as analogs for  
25 subsurface formations.

1           Q.     And can I have you pull up in front of  
2     you, Ted, the Exhibit LO-58?

3           A.     I'm not in the office, so if you describe  
4     it to me, though, I can do that.

5           Q.     Do you recall the information contained on  
6     your curriculum vitae?

7           A.     Your -- can you repeat the question?

8           Q.     So I'll tell you Exhibit 58 is your  
9     curriculum vitae. Are you familiar with --

10          A.     Oh.

11          Q.     -- the contents of your curriculum vitae?

12          A.     Oh, yes. Yes, sir. Yes.

13          Q.     Okay. And does that accurately describe  
14     your educational and professional background and  
15     experience.

16          A.     Yes, sir. With the exception of several  
17     items that I left off that I did recently. I  
18     actually was the well site geologist on the J-Loc  
19     Minnkota well that was drilled as part of their  
20     carbon sequestration project. I logged --  
21     personally logged 1600 feet of core on site for  
22     that project.

23          Q.     Okay.

24          A.     And I've also done a lot of helium  
25     exploration in the last, oh, six months.

1 MR. BRAATEN: Okay. Move to admit LO-58.

2 HEARING EXAMINER GARNER: Any objection?

3 MR. BENDER: No objection. Oh, thank you.

4 No objection.

5 HEARING EXAMINER GARNER: The exhibit is  
6 admitted.

7 MR. BENDER: My mike was off.

8 HEARING EXAMINER GARNER: Exhibit is  
9 admitted.

10 Q. (MR. BRAATEN CONTINUING) And, Ted, did  
11 you review the applications submitted by EERC and  
12 Summit that bring us here today?

13 A. Yes, I have, in extensive detail.

14 Q. And can you start by just describing to us  
15 the areas of those applications regarding which you  
16 would have particular expertise?

17 A. Yes. So they have core data on the Broom  
18 Creek Formation of which I mentioned I personally  
19 logged all the J-Loc wells. So I'm familiar with  
20 that. Also I have expertise in 3D seismic  
21 interpretation. I haven't seen their 3D seismic,  
22 but it's a critical part of their application, as  
23 well as the formation mechanical integrity work  
24 that they did doing the testing in their test well.

25 Q. What data would you need in order to

1     create a PHI-H map to map out the porosity and  
2     permeability of a reservoir?

3           A.     So from what I've seen of their  
4     applications, the -- there's only one -- no,  
5     there's three -- I think there's three -- there's  
6     two wells that are close together and another well  
7     in their AOR which encompasses about -- actually,  
8     I'm not sure how big the AOR is, but if you take  
9     their simulation area, there's 26 wells in the  
10    simulation area -- or the simulation area, there's  
11    26 wells. It's about a well per 55 square miles  
12    which is not very many data points. So within the  
13    AOR there's only 3 data points. There's no legacy  
14    wells.

15                So you would need to coordinate it, which  
16    they provided, but as well it appears like the  
17    seismic data was a critical part of how they  
18    defined the reservoir properties in the AOR.  
19    There's only -- like I mentioned, there's very few  
20    wells within the AOR. So we'd need access to the  
21    3D seismic to actually do a facies analysis to  
22    determine what the seismic data tells you about the  
23    reservoir within that AOR.

24                And within that application, there's only  
25    one map that shows the permeability distribution

1       within their stimulation -- their simulation area.  
2       Excuse me. So there's very little data within  
3       their application with which to evaluate exactly  
4       how they derive their permeability parameters for  
5       the AOR that they're applying for.

6           Q.     Mr. Doughty, do you recall approximately  
7       how long ago you were asked about the possibility  
8       of working on this matter?

9           A.     It was, what, a month ago, maybe three  
10      weeks ago, something like that.

11          Q.     And are you ready, willing and able to  
12      conduct additional review and particularly review  
13      of seismic data if you receive it?

14          A.     Yes, I am.

15                 MR. BRAATEN: No further questions.

16                 HEARING EXAMINER GARNER: Attorney Bender.

17                                 **CROSS-EXAMINATION**

18       **BY MR. BENDER:**

19          Q.     Mr. Doughty, are you -- Mr. Doughty, are  
20      you in a position today to make any recommendations  
21      to the Commission as to whether this application  
22      should be approved or denied?

23          A.     I am.

24          Q.     And what are your conclusions?

25          A.     I would recommend that it's denied on the

1 basis that the applicant did not -- has not  
2 provided enough of the data from which the  
3 Commission or another party could evaluate how they  
4 came up with some of their reservoir properties.

5 Q. Okay.

6 A. Without the 3D seismic, you cannot  
7 determine the distribution of permeability and  
8 porosity across the AOR.

9 Q. Okay. And I believe it was your testimony  
10 at this point in time all you have reviewed is the  
11 three applications; is that correct?

12 A. That is correct. And --

13 Q. And you haven't reviewed -- you haven't  
14 reviewed the other data that's on file with the  
15 Commission?

16 A. I've reviewed the data that's publicly  
17 available.

18 Q. Okay.

19 A. Yes.

20 Q. Did you -- have you seen a letter dated  
21 May 15, 2024, from Mr. Braaten to the Commission  
22 requesting certain information?

23 A. I have not seen the letter. I've heard  
24 that there's a motion to compel.

25 Q. Okay. Do you know if the Commission

1 indicates that they supplied that information to  
2 Mr. Braaten?

3 A. I do not.

4 Q. Okay. You talked a little bit about a  
5 PHI-H map, and I don't want to put -- I don't want  
6 to testify for you, but I understood you to say  
7 that a PHI-H map would have been important for the  
8 Commission in this case. Is that a -- is that a  
9 fair statement of your testimony?

10 A. Yes, that is a fair statement. If you --  
11 if you want to understand where the CO<sub>2</sub>'s going as  
12 you inject it, you need a PHI-H map to determine  
13 the -- the storage capacity to the formation.

14 Q. Okay. And you --

15 A. And like I -- like I said earlier, there's  
16 only three data points within the AOR. So I'm -- I  
17 don't quite understand how the EERC came up with  
18 such a complex map of permeability and porosity  
19 without having additional data. It should have  
20 been provided in their submittal.

21 Q. Okay. And I think you also indicated that  
22 you were involved -- you sat the -- the well for  
23 Minnkota's -- the J-Loc?

24 A. The J-Loc.

25 Q. Yeah, the J-Loc.

1           A.    Yep.   J-Loc.   Yep.

2           Q.    So you know somewhat about that -- you  
3 know some things about that application that was  
4 made to the Commission for a Class VI well; is that  
5 correct?

6           A.    I -- no.   I don't -- I set the well.   I  
7 described the core.   I was not involved in anything  
8 after they drilled the well.

9           Q.    You knew the --

10          A.    But I.

11          Q.    -- you know the Commission granted the  
12 application; correct?

13          A.    Yes.

14          Q.    Do --

15          A.    But I wasn't involved in it.   I do know  
16 what the core looked like and somewhat of the  
17 reservoir properties of the Broom Creek.

18          Q.    And, you know, thank you for all that, but  
19 we can get through this a little bit quicker if you  
20 just answer my questions.

21                Do you know --

22               MR. BRAATEN:   I think he did.

23               MR. BENDER:   Well, I think he went on a  
24 little bit more than he needed to, but I'll move  
25 on.

1           Q.     (MR. BENDER CONTINUING) Do you know if  
2 Minnkota submitted a PHI-H map in its application?

3           A.     I do not.

4           Q.     Are you familiar with the application that  
5 was filed by Blue Flint?

6           A.     No.

7           Q.     Do you know if they submitted a PHI-H map?

8           A.     I do not.

9           Q.     Are you familiar with the application that  
10 was submitted by Dakota Gasification?

11          A.     No.

12          Q.     Do you know if they submitted a PHI map --  
13 PHI-H map?

14          A.     No.

15          Q.     Are you familiar with the application that  
16 was filed by Red Trail?

17          A.     No.

18          Q.     Do you know if they submitted a PHI-H map?

19          A.     No.

20          Q.     Do you know all those applications were  
21 granted by the Commission?

22          A.     No.

23                 MR. BENDER: No further questions.

24                 HEARING EXAMINER GARNER: Any questions  
25 from the staff?

1 Redirect, Attorney Braaten?

2 MR. BRAATEN: No, I don't have any further  
3 questions. Thank you very much, Mr. Doughty.

4 MR. DOUGHTY: Thank you.

5 HEARING EXAMINER GARNER: Okay. You can  
6 call your next witness.

7 MR. BRAATEN: We are calling Paul Button.

8 HEARING EXAMINER GARNER: Button?

9 MR. BRAATEN: Yes.

10 **PAUL BUTTON,**

11 being first duly sworn, was examined and testified  
12 as follows:

13 **DIRECT EXAMINATION**

14 **BY MR. BRAATEN:**

15 Q. Mr. Button, can you state your full name  
16 and tell us -- well, let's start there. Just state  
17 your full name, please.

18 A. My name is Paul Michael Button.

19 Q. And can you give us a business or  
20 residential address?

21 A. My residential address is 1119 South Ophir  
22 Street in Butte, Montana.

23 Q. All right. Can you tell us just a little  
24 bit about your educational background?

25 A. I have a bachelor of science degree in

1     petroleum engineering from Montana Tech.

2           Q.     All right. And tell us a bit about your  
3     professional experience.

4           A.     My professional experience is I've worked  
5     26 years as a petroleum engineer. I started off my  
6     career as a reservoir engineer for Marathon Oil  
7     Company working the Yates Field in West Texas doing  
8     simulation on gas oil gravity drainage with  
9     nitrogen injection and then converting it over to  
10    CO<sub>2</sub> injection.

11                From there I moved to -- on to Kinder  
12    Morgan when they acquired the Yates asset. I did a  
13    little bit of reservoir simulation on Yates, and  
14    then I worked the SACROC CO<sub>2</sub> flood unit in Scurry  
15    County, Texas.

16                After I left Kinder Morgan, I worked for  
17    SM Energy in Billings, Montana, for a number of  
18    years doing enhanced oil recovery studies on fields  
19    in the state of Wyoming. Also worked several water  
20    floods and shale development wells within the  
21    Powder River Basin, Richland County, Montana, and a  
22    little bit of experience in Divide County, North  
23    Dakota.

24                From there I left SM Energy and I went out  
25    on my own as a consultant. I did numerous

1 consulting jobs for multiple clients, including  
2 purchase and acquisition, evaluation, State  
3 evaluations and reservoir simulation for enhanced  
4 oil recovery on the Poplar Dome in Montana.

5 I then joined a company called Poplar  
6 Resources as a vice president where we implemented  
7 a pilot for enhanced -- a nitrogen injection flood.  
8 And I have been with that ever since.

9 And then I also started a startup for a  
10 battery energy storage corporation. We do  
11 compressed air energy storage. And I'm currently  
12 working both the Poplar job, the consulting job,  
13 and battery energy storage job.

14 Q. Okay. Can I have you turn in the exhibits  
15 to what we marked as LO-57?

16 A. Yes.

17 Q. Let me know, do you have that in front of  
18 you now?

19 A. Yes, I do.

20 Q. And what is Exhibit 57?

21 A. I would call it my résumé or CV.

22 Q. Okay. And does this CV accurately reflect  
23 your educational and professional experience and  
24 qualifications?

25 A. I would probably -- I caught a couple of

1 errors in here. The Button Petroleum Management,  
2 it was no longer active until recently again, so I  
3 would add that through 2024.

4 Q. Okay.

5 A. And I believe the name of the -- my  
6 educational school is no longer accurate because  
7 it's no longer Montana Tech of the University of  
8 Montana. I believe it's the Montana Technological  
9 University.

10 Q. Okay. Other than those, does the  
11 Exhibit 57 accurately reflect your professional and  
12 educational experience and qualifications?

13 A. Yes.

14 MR. BRAATEN: Move to admit Exhibit 57.

15 MR. BENDER: No objection.

16 HEARING EXAMINER GARNER: Exhibit is  
17 admitted.

18 Q. (MR. BRAATEN CONTINUING) Mr. Button, can  
19 you tell me if you have any experience with Class  
20 II wells or permitting Class II wells?

21 A. Yes. I have permitted a num -- a number  
22 of Class II wells in the state of Montana.

23 Q. And with respect to any of those Class II  
24 wells, was it necessary to obtain an aquifer  
25 exemption?

1           A.     Yes.   We worked on an aquifer exemption  
2     for one of the wells within the Poplar unit, east  
3     Poplar unit.

4           Q.     Okay.   Was there any kind of a volumetric  
5     limit imposed as part of that aquifer exemption?

6           A.     Yes, I believe so.

7           MR. BENDER:   Objection.   Relevance.

8           HEARING EXAMINER GARNER:   Overruled.

9           Q.     (MR. BRAATEN CONTINUING)   And are you  
10    familiar with the manner in which the volumetric  
11    limits are calculated for aquifer exemptions by  
12    either the EPA or state authorities?

13          A.     I am familiar with how the volumetric  
14    extensions were calculated and approved for the  
15    permits that I worked on.   Yes.

16          Q.     Okay.   And so with respect to the permits  
17    you worked on, can you just provide a general  
18    description of how those volumetric limits are  
19    calculated for the aquifer exemptions?

20          A.     Basically, these were pretty simple  
21    calculations in that you would calculate the -- the  
22    volume within a given X number of foot radius that  
23    you believe you'll affect with the water injection,  
24    you know, so you get a volume of a cylinder,  
25    multiply it by your porosity, divide it by your

1 formation volume factor of water and that is the  
2 volume that will be affected.

3 Q. Do you have experience with reservoir  
4 modeling and -- well, you've already talked about  
5 this. Can you tell us a little bit about the  
6 experience you have with EOR and water floods with  
7 respect specifically to field development analysis?

8 A. Yes. I've had several major modeling  
9 projects over my career. The first one was for  
10 Yates field. We spent quite a few years looking at  
11 and running sensitivities on gas oil gravity  
12 drainage, enhanced oil recovery process as far as  
13 looking at gas oil contact movement speed versus  
14 the drainage of oil from the matrix in the  
15 reservoir. We also looked at viscosity effects  
16 with the injection of different gases and the  
17 swelling effects in the oil with different  
18 composition of injected gases, whether it was  
19 nitrogen, CO<sub>2</sub> or a mixture of recycled gas to  
20 determine the most effective recovery and most  
21 economic recovery mechanism with an EOR process.

22 My other major modeling project which I've  
23 worked on most recently is developing a full-field  
24 simulation model to model the history and also the  
25 enhanced oil recovery potential for Poplar Dome in

1 Montana, the East Poplar unit. That is a  
2 70-year-old field that's probably undergone primary  
3 depletion with a strong natural water drive where I  
4 deal with gas on the top of it and expose the  
5 matrix to gas oil gravity drainage and determine if  
6 that was an economically feasible project.

7 Q. And can you tell us about any other  
8 specific experiences you have related to doing  
9 reservoir modeling and analysis?

10 A. I'm currently working on setting up the  
11 parameters to look at natural -- or compressed air  
12 storage in salt caverns and looking at the pressure  
13 volume and temperature effects and the rock stress  
14 effects within salt caverns to determine the  
15 feasibility for the active storage reservoirs.

16 Q. Mr. Button, do you have an understanding  
17 of different ways that pore space can be used in a  
18 commercial manner?

19 A. Yes, I do.

20 Q. And if a landowner wants to make a  
21 commercial use of pore space, can you tell us what  
22 you understand to be the options for making that  
23 commercial use of pore space?

24 A. It's basically three options of which  
25 there can be multiple derivatives of each option,

1 but either you remove fluid and market it as a --  
2 as a quantity, you temporarily store something in  
3 your pore space, or you permanently sequester  
4 something in your pore space.

5 Q. And how would you assess the degree to  
6 which the pore space of a given landowner is being  
7 used in a way that forecloses other commercial  
8 uses?

9 A. I guess I would attempt to evaluate the  
10 change in the pressure volume temperature of the  
11 fluids contained within the pore space, and knowing  
12 that there are certain constraints on the upper end  
13 of the pressure and certain constraints on the  
14 lower end of the pressure and try to determine what  
15 the current impacts, what the proposed impacts and  
16 what the -- the final limits were of that pore  
17 space.

18 Q. Mr. Button, if you were provided with the  
19 data decks and input files required to run models  
20 in CMG and Schlumberger's Petrel software for this  
21 project, would you be ready, willing and able to  
22 run those models and analyze them for the  
23 intervenors?

24 A. The CMG model, I would be ready to upload  
25 those and run those and do some sensitivity

1     analysis on those models. As far as the Petrel  
2     model, the Petrel model is a static model. It's  
3     basically a geologic database, so those -- unless  
4     you're trying to redistribute properties or  
5     something like that, there's -- it's not a dynamic  
6     model where the answer changes, so I don't think  
7     there's nothing -- there's nothing to run there.

8             MR. BRAATEN: Understood. No further  
9     questions.

10            HEARING EXAMINER GARNER: Attorney Bender.

11                                   **CROSS-EXAMINATION**

12     **BY MR. BENDER:**

13            Q. Mr. Button, you -- you spent some time  
14     describing your experience as an engineer and  
15     involved in various enhanced oil recovery projects  
16     around the country. Is that a fair statement?

17            A. Yes.

18            Q. And you also talked about a compressed air  
19     project that you're working on. Do you recall  
20     that?

21            A. Yes.

22            Q. And in those projects, both the enhanced  
23     oil recovery projects and the compressed air  
24     project, you were involved in running some models;  
25     is that a fair statement?

1           A.     Yes.

2           Q.     Okay.  Would you agree with me that  
3     running -- preparing and running models for  
4     enhanced oil recovery projects and a compressed air  
5     project is different than preparing and running a  
6     model for CO<sub>2</sub> storage?

7           A.     Can you clarify what you mean by  
8     "different"?

9           Q.     Well, if you've run -- or prepared and run  
10    models for CO<sub>2</sub> on a number of projects, are you  
11    going to have more knowledge and experience than  
12    someone who has not run models for CO<sub>2</sub>, only for  
13    enhanced oil recovery and compressed air?

14          A.     Well, the models that I've ran for  
15    enhanced oil recovery, especially for when I worked  
16    the Yates field, those directly involved the  
17    injection of CO<sub>2</sub> in the pore space --

18          Q.     Okay.

19          A.     -- so they're not too dissimilar.  The  
20    only -- the main dissimilar between those two  
21    models is that in the carbon sequestration, the  
22    CO<sub>2</sub>'s interaction is primarily with water, where in  
23    those other models it was with both water and oil.  
24    So they were actually more complex.

25          Q.     Okay.  Are you familiar with the data

1 requests that Mr. Braaten made to the Industrial  
2 Commission?

3 A. I --

4 Q. Pardon me?

5 A. Yes, I am.

6 Q. Okay.

7 A. Yes, I am.

8 Q. Okay. And are you familiar with the type  
9 of data that would be contained within a CMG data  
10 file?

11 A. Yes, I am.

12 Q. Could someone produce a PHI-H map if they  
13 had a CMG data file?

14 A. I believe that within CMG's program you  
15 could get that, yes.

16 Q. Okay. And are you aware that it's the --  
17 in the Commission's position that they provided a  
18 CMG data file to Mr. Braaten?

19 A. I am not aware of the CMG data file, if  
20 Mr. Braaten is in possession of it or -- I am  
21 certainly not in possession of that CMG data file.

22 Q. He didn't provide it to you?

23 A. I have not seen it, no.

24 Q. Is it a fair statement that -- well, let  
25 me back -- strike that.

1           A.     Let me --

2           Q.     How many hours -- just let me ask the  
3 questions. Just let me ask the questions.

4           A.     Okay.

5           Q.     How many hours of time have you spent  
6 working on this project?

7           A.     I have -- up until the start of this  
8 hearing, I spent 14-and-a-half hours working on it.

9           Q.     Okay. And what were you asked to do?

10           MR. BRAATEN: Same objection to privileged  
11 communications with experts.

12           HEARING EXAMINER GARNER: Overruled.

13           MR. BUTTON: What was I asked to do?

14           Q.     (MR. BENDER CONTINUING) Yes.

15           A.     I was asked by Mr. Braaten to evaluate the  
16 impact of the pore space of his clients.

17           Q.     Okay. And to do that at this point in  
18 time, all you have done is reviewed the  
19 applications that were submitted to the Commission;  
20 is that correct?

21           A.     No.

22           Q.     You didn't review the applications?

23           A.     I did review the applications, but that is  
24 not all that I've done.

25           Q.     What else did you do in the 15 hours that

1       you've spent on this project?

2           A.     I have looked through the well files of  
3       the wells in the immediate area to see what  
4       information was available.

5           Q.     How many hours did you spend reviewing the  
6       applications?

7           A.     Probably the majority of the 14 hours.

8           Q.     Okay.

9           A.     But I don't have a specific number, but I  
10      could get that number for you.

11          Q.     More than ten?

12          A.     I would say yes.   Probably in the ten  
13      range.

14          Q.     Well, you said more than 10.   Would it be  
15      11 or 12?

16          A.     We'll go with more than ten.

17          Q.     Okay.   And then the other -- the only  
18      other time you would have -- well, strike that.

19                 The additional time you would have spent  
20      between 10 hours and 15 hours would have been to  
21      review some logs; is that what you said?

22          A.     I did not say I reviewed logs.   I said I  
23      reviewed the well files on the Commission website.

24          Q.     Okay.   What are in the well files?

25          A.     The well files contain the core reports

1 and some of that type of information. They have  
2 like casing size and the drilling completion  
3 information, things like that.

4 Q. Okay. Would you agree with me that you  
5 really haven't reviewed enough to make any sort of  
6 recommendation to the Commission whether this  
7 application should be granted or denied?

8 A. Absolutely.

9 MR. BENDER: Okay. No further questions.

10 HEARING EXAMINER GARNER: Any questions  
11 from the staff?

12 Mr. Braaten, any redirect?

13 MR. BUTTON: Are you waiting for a  
14 response from me?

15 MR. BRAATEN: Sorry. No, Mr. Button, that  
16 was on me. I'm just taking a moment to review my  
17 notes to see if I have anything else to ask. Give  
18 me one moment, please.

19 I have nothing further.

20 HEARING EXAMINER GARNER: Okay. I know  
21 you said you only expected to get through three  
22 witnesses, but you still have 20 minutes.

23 MR. BRAATEN: I'm -- yeah, I'm sorry, I  
24 have one more, but he is no longer available.

25 HEARING EXAMINER GARNER: He's not

1 available right now?

2 MR. BRAATEN: Right.

3 HEARING EXAMINER GARNER: Let's go off the  
4 record for a minute.

5 (Recessed at 6:10 p.m. and reconvened at  
6 6:11 p.m.)

7 HEARING EXAMINER GARNER: Okay. We are  
8 back on the record, and we are going to recess  
9 these hearings and resume tomorrow morning at  
10 9 a.m. That concludes our hearings for the day.

11 (Recessed at 6:12 p.m., Wednesday, the 12th  
12 day of June, 2024.)

1 CERTIFICATE OF COURT REPORTER  
2

3 I, Stephanie A. Smith, a Registered  
4 Professional Reporter,

5 DO HEREBY CERTIFY that I recorded in  
6 shorthand the foregoing proceedings had and made of  
7 record at the time and place hereinbefore  
8 indicated.

9 I DO HEREBY FURTHER CERTIFY that the  
10 foregoing typewritten pages contain an accurate  
11 transcript of my shorthand notes then and there  
12 taken.

13 Dated at Bismarck, North Dakota, this 3rd  
14 day of July, 2024.

 140 North, Range 88 West and :  
 Sections 4, 5, 6, and 7, Township :  
 140 North, Range 87 West, Mercer, :  
 Morton, and Oliver Counties, ND. :

In re application of Summit :  
 Carbon Storage #1, LLC to :  
 consider the amalgamation of the :  
 storage reservoir pore space, in :  
 which the Commission may require :  
 that the pore space owned by :  
 nonconsenting owners be included :  
 in the geologic storage, as :  
 required to operate the Summit :  
 Carbon Storage #1, LLC storage :  
 facility located in Sections 31, :  
 32, 33, and 34, Township 142 :  
 North, Range 87 West, Sections 1, :  
 11, 12, 13, 14, 15, 22, 23, 24, :  
 25, 26, 35, and 36, Township 141 :  
 North, Range 88 West, Sections 2, :  
 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, :  
 15, 16, 17, 18, 19, 20, 21, 22, :  
 23, 25, 26, 27, 28, 29, 30, 31, :

32, 33, 34, and 35, Township 141 :  
 North, Range 87 West, Sections 1, :  
 2, 3, and 12, Township 140 North, :  
 Range 88 West and Sections 4, 5, :  
 6, and 7, Township 140 North, :  
 Range 87 West, Mercer, Morton, :  
 and Oliver Counties, ND, in the :  
 Broom Creek Formation. :

In re application of Summit :  
 Carbon Storage #1, LLC for an :  
 order of the Commission :  
 determining the amount of :  
 financial responsibility for the :  
 geologic storage of carbon dioxide: :  
 from the Midwest Carbon Express :  
 Pipeline in the storage facility :  
 located in Sections 31, 32, 33, :  
 and 34, Township 142 North, Range :  
 87 West, Sections 1, 11, 12, 13, :  
 14, 15, 22, 23, 24, 25, 26, 35, :  
 and 36, Township 141 North, Range :  
 88 West, Sections 2, 3, 4, 5, 6, :  
 7, 8, 9, 10, 11, 14, 15, 16, 17, :  
 18, 19, 20, 21, 22, 23, 25, 26, :  
 27, 28, 29, 30, 31, 32, 33, 34, :  
 and 35, Township 141 North, Range :  
 87 West, Sections 1, 2, 3, and 12,:  
 Township 140 North, Range 88 West :  
 and Sections 4, 5, 6, and 7, :  
 Township 140 North, Range 87 West,:  
 Mercer, Morton, and Oliver :  
 Counties, ND, in the Broom Creek :  
 Formation. :

In re motion to consider :  
 establishing the field and pool :  
 limits for lands located in :  
 Sections 31, 32, 33, and 34, :  
 Township 142 North, Range 87 West,:  
 Sections 1, 11, 12, 13, 14, 15, :  
 22, 23, 24, 25, 26, 35, and 36, :  
 Township 141 North, Range 88 West,:  
 Sections 2, 3, 4, 5, 6, 7, 8, 9, :  
 10, 11, 14, 15, 16, 17, 18, 19, :  
 20, 21, 22, 23, 25, 26, 27, 28, :  
 29, 30, 31, 32, 33, 34, and 35, :

Township 141 North, Range 87 West, :  
 Sections 1, 2, 3, and 12, Township :  
 140 North, Range 88 West and :  
 Sections 4, 5, 6, and 7, Township :  
 140 North, Range 87 West, Mercer, :  
 Morton, and Oliver Counties, ND, :  
 subject to the application of :  
 Summit Carbon Storage #1, LLC for :  
 the geologic storage of carbon :  
 dioxide in the Broom Creek :  
 Formation, and enact such special :  
 field rules as may be necessary. :

In re application of Summit :  
 Carbon Storage #2, LLC requesting :  
 consideration for the geologic :  
 storage of carbon dioxide in the :  
 Broom Creek Formation from the :  
 Midwest Carbon Express Pipeline :  
 in the storage facility located in :  
 Sections 27, 28, 29, 32, 33, 34, :  
 and 35, Township 143 North, Range :  
 88 West, Sections 1, 2, 3, 4, 5, :  
 6, 7, 8, 9, 10, 11, 12, 13, 14, :  
 15, 16, 17, 18, 19, 20, 21, 22, :  
 23, 24, 25, 26, 27, 28, 29, 30, :  
 32, 33, 34, 35, and 36, Township :  
 142 North, Range 88 West, Sections :  
 5, 6, 7, 8, 17, 18, 19, 20, 29, :  
 30, and 31, Township 142 North, :  
 Range 87 West, and Sections 1, 2, :  
 and 3, Township 141 North, Range :  
 88 West, Mercer and Oliver :  
 Counties, ND. :

In re application of Summit :  
 Carbon Storage #2, LLC to :  
 consider the amalgamation of the :  
 storage reservoir pore space, in :  
 which the Commission may require :  
 that the pore space owned by :  
 nonconsenting owners be included :  
 in the geologic storage, as :  
 required to operate the Summit :  
 Carbon Storage #2, LLC storage :  
 facility located in Sections 27, :  
 28, 29, 32, 33, 34, and 35, :

Township 143 North, Range 88 West, :  
 Sections 1, 2, 3, 4, 5, 6, 7, 8, :  
 9, 10, 11, 12, 13, 14, 15, 16, 17, :  
 18, 19, 20, 21, 22, 23, 24, 25, :  
 26, 27, 28, 29, 30, 32, 33, 34, :  
 35, and 36, Township 142 North, :  
 Range 88 West, Sections 5, 6, 7, :  
 8, 17, 18, 19, 20, 29, 30, 31, :  
 Township 142 North, Range 87 :  
 West, and Sections 1, 2, and 3, :  
 Township 141 North, Range 88 :  
 West, Mercer and Oliver Counties, :  
 ND in the Broom Creek Formation. :

In re application of Summit :  
 Carbon Storage #2, LLC to :  
 consider the application of Summit :  
 Carbon Storage #2, LLC for an :  
 order of the Commission :  
 determining the amount of :  
 financial responsibility for the :  
 geologic storage of carbon dioxide :  
 from the Midwest Carbon Express :  
 Pipeline in the storage facility :  
 located in Sections 27, 28, 29, :  
 32, 33, 34, and 35, Township 143 :  
 North, Range 88 West, Sections 1, :  
 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, :  
 12, 13, 14, 15, 16, 17, 18, 19, :  
 20, 21, 22, 23, 24, 25, 26, 27, :  
 28, 29, 30, 32, 33, 34, 35, and :  
 36, Township 142 North, Range 88 :  
 West, Sections 5, 6, 7, 8, 17, 18, :  
 19, 20, 29, 30, and 31, Township :  
 142 North, Range 87 West, and :  
 Sections 1, 2, and 3, Township 141 :  
 North, Range 88 West, Mercer and :  
 Oliver Counties, ND, in the Broom :  
 Creek Formation. :

In re motion of the Commission to :  
 consider establishing the field :  
 and pool limits for lands located :  
 in Sections 27, 28, 29, 32, 33, :  
 34, and 35, Township 143 North, :  
 Range 88 West, Sections 1, 2, 3, :  
 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, :

14, 15, 16, 17, 18, 19, 20, 21, :  
 22, 23, 24, 25, 26, 27, 28, 29, :  
 30, 32, 33, 34, 35, and 36, :  
 Township 142 North, Range 88 West, :  
 Sections 5, 6, 7, 8, 17, 18, 19, :  
 20, 29, 30, and 31, Township 142 :  
 North, Range 87 West, and Sections :  
 1, 2, and 3, Township 141 North, :  
 Range 88 West, Mercer and Oliver :  
 Counties, ND, subject to the :  
 application of Summit Carbon :  
 Storage #2, LLC for the geologic :  
 storage of carbon dioxide in the :  
 Broom Creek Formation, and enact :  
 such special field rules as may :  
 be necessary. :

In re application of Summit :  
 Carbon Storage #3, LLC requesting :  
 consideration for the geologic :  
 storage of carbon dioxide in the :  
 Broom Creek Formation from the :  
 Midwest Carbon Express Pipeline in :  
 the storage facility located in :  
 Section 36, Township 143 North, :  
 Range 87 West, Sections 19, 20, :  
 21, 28, 29, 30, 31, 32, 33, 34, :  
 35, and 36, Township 143 North, :  
 Range 86 West, Sections 1, 2, 11, :  
 12, 13, 14, and 24, Township 142 :  
 North, Range 87 West, Sections 1, :  
 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, :  
 12, 13, 14, 15, 16, 17, 18, 19, :  
 20, 21, 22, 23, 24, 25, 26, 27, :  
 28, 29, 30, 32, 33, 34, and 35, :  
 Township 142 North, Range 86 :  
 West, and Sections 6, 7, 17, 18, :  
 19, and 20, Township 142 North, :  
 Range 85 West, Oliver County, ND. :

In re application of Summit :  
 Carbon Storage #3, LLC to consider :  
 the amalgamation of the storage :  
 reservoir space, in which the :  
 Commission may require that the :  
 pore space owned by nonconsenting :  
 owners be included in the geologic :

storage, as required to operate :  
 the Summit Carbon Storage #3, LLC :  
 storage facility located in :  
 Section 36, Township 143 North, :  
 Range 87 West, Sections 19, 20, :  
 21, 28, 29, 30, 31, 32, 33, 34, :  
 35, and 36, Township 143 North, :  
 Range 86 West, Sections 1, 2, 11, :  
 12, 13, 14, and 24, Township 142 :  
 North, Range 87 West, Sections 1, :  
 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, :  
 12, 13, 14, 15, 16, 17, 18, 19, :  
 20, 21, 22, 23, 24, 25, 26, 27, :  
 28, 29, 30, 32, 33, 34, and 35, :  
 Township 142 North, Range 86 West, :  
 and Sections 6, 7, 17, 18, 19, and :  
 20, Township 142 North, Range 85 :  
 West, Oliver County, ND, in the :  
 Broom Creek Formation. :

In re application of Summit :  
 Carbon Storage #3, LLC for an :  
 order of the Commission :  
 determining the amount of :  
 financial responsibility for the :  
 geologic storage of carbon dioxide :  
 from the Midwest Carbon Express :  
 Pipeline in the storage facility :  
 located in Section 36, Township :  
 143 North, Range 87 West, Sections :  
 19, 20, 21, 28, 29, 30, 31, 32, :  
 33, 34, 35, and 36, Township 143 :  
 North, Range 86 West, Sections 1, :  
 2, 11, 12, 13, 14, and 24, :  
 Township 142 North, Range 87 West, :  
 Sections 1, 2, 3, 4, 5, 6, 7, 8, :  
 9, 10, 11, 12, 13, 14, 15, 16, 17, :  
 18, 19, 20, 21, 22, 23, 24, 25, :  
 26, 27, 28, 29, 30, 32, 33, 34, :  
 and 35, Township 142 North, Range :  
 86 West, and Sections 6, 7, 17, :  
 18, 19, and 20, Township 142 :  
 North, Range 85 West, Oliver :  
 County, ND, in the Broom Creek :  
 Formation. :

In re motion of the Commission to :  
consider establishing the field :  
and pool limits for lands located :  
in Section 36, Township 143 North, :  
Range 87 West, Sections 19, 20, :  
21, 28, 29, 30, 31, 32, 33, 34, :  
35, and 36, Township 143 North, :  
Range 86 West, Sections 1, 2, 11, :  
12, 13, 14, and 24, Township 142 :  
North, Range 87 West, Sections 1, :  
2, 3, 4, 5, 6, 7, 8, 9, 10, 11, :  
12, 13, 14, 15, 16, 17, 18, 19, :  
20, 21, 22, 23, 24, 25, 26, 27, :  
28, 29, 30, 32, 33, 34, and 35, :  
Township 142 North, Range 86 West, :  
and Sections 6, 7, 17, 18, 19, and :  
20, Township 142 North, Range 85 :  
West, Oliver County, ND, subject :  
to the application of Summit :  
Carbon Storage #3, LLC for the :  
geologic storage of carbon dioxide :  
in the Broom Creek Formation, and :  
enact such special field rules as :  
may be necessary. :

TRANSCRIPT OF HEARING

VOLUME II - (Pages 277 - 552)

Taken At  
1000 East Calgary Avenue  
Bismarck, North Dakota  
June 12, 2024

BEFORE DAVID P. GARNER  
-- HEARING EXAMINER --

1 (The following proceedings were had and  
2 made of record herein, commencing at 9:06 a.m.,  
3 Wednesday, the 12th day of June, 2024:)  
4 HEARING EXAMINER GARNER: We are on the  
5 record for hearings in the matters listed in the  
6 North Dakota Industrial Commission Hearing Docket  
7 for June 12. I'm David Garner, hearing examiner  
8 for these hearings. We're at the hearing room for  
9 the Department of Mineral Resources, Oil & Gas  
10 Division, and it is 9:08 a.m.  
11 We will resume our hearings for Case  
12 Numbers 30869 through 30880. I notice new counsel  
13 appeared at the table, so I'll give everyone an  
14 opportunity for all interested parties to please  
15 come forward again.  
16 MR. BENDER: Thank you, Mr. Examiner.  
17 I'll introduce Tom. He doesn't need any  
18 introduction, but with us today is Tom Throne.  
19 He's going to be assisting with Summit in this  
20 application.  
21 HEARING EXAMINER GARNER: Okay.  
22 MR. BRAATEN: Derrick Braaten, Braaten Law  
23 Firm, on behalf of the landowner intervenors. With  
24 me is my paralegal, Desirae Zaste, and client Kirk  
25 Swenson.

290

1 MR. BENDER: I apologize. I thought you  
2 were just looking for an introduction of the new  
3 counsel.  
4 HEARING EXAMINER GARNER: No, that's --  
5 MR. BENDER: Did you want me to make  
6 another appearance or --  
7 HEARING EXAMINER GARNER: No. That's  
8 fine.  
9 MR. BENDER: Okay.  
10 HEARING EXAMINER GARNER: That's fine.  
11 Just a quick note. We're going to resume with the  
12 cross-examination of the two witnesses that were  
13 being crossed by Mr. Braaten yesterday. Change,  
14 though. We're going to then at that point in time  
15 allow Summit to call its remaining witnesses, give  
16 the Commission a chance to respond to them -- or  
17 question them. And then you'll have the remainder  
18 of the time to cross-examine those witnesses.  
19 MR. BRAATEN: Okay. And, Your Honor, I  
20 don't want to be difficult or take up time. I just  
21 want to put on the record that I do object to that  
22 process.  
23 HEARING EXAMINER GARNER: Okay.  
24 MR. HELMS: 6:30.  
25 HEARING EXAMINER GARNER: Oh, I'm sorry.

291

1 And we're going to have a deadline today again of  
2 6:30 p.m., and if we are not done, we will be back  
3 here tomorrow morning at 9 a.m.  
4 Okay. With that, I think we can proceed.  
5 MR. HELMS: They're still under oath.  
6 HEARING EXAMINER GARNER: They're still  
7 under oath.  
8 **CONTINUED CROSS-EXAMINATION**  
9 **BY MR. BRAATEN:**  
10 Q. I wasn't going to ask this, but since it  
11 came up, do you understand that you're still under  
12 oath?  
13 A. (BY MS. DOUGLAS) I do.  
14 Q. Okay. We were discussing the CO<sub>2</sub> plume  
15 model yesterday, and I want to start by just asking  
16 if you have an understanding within the regulatory  
17 framework for Class 6 wells why a plume model is  
18 constructed?  
19 A. I do.  
20 Q. And what is that understanding?  
21 A. So under the North Dakota UIC Class VI  
22 regulations, a geologic model is constructed to  
23 help define the horizontal and vertical boundaries  
24 of a storage reservoir.  
25 Q. For what purpose or reason?

292

1 A. The purpose of this is to define the  
2 boundaries of the storage reservoir, in this case  
3 which would be the storage facility, which the  
4 regulations require pore space owners within that  
5 storage facility to be equitably compensated.  
6 Also, the modeling and simulation, it's constructed  
7 to help delineate the area of review, which is also  
8 a requirement of the statutes to delineate the area  
9 of review.  
10 Q. And the delineation of the area of review  
11 is also the primary requirement or reason for  
12 creating that model under the Safe Drinking Water  
13 Act?  
14 A. So we're talking about two sets of  
15 regulations here. So in -- in North Dakota UIC  
16 Class VI regulations, as I mentioned, the modeling  
17 is a tool to determine the AOR in the storage  
18 facility area. The Safe Water Drinking Act, under  
19 that, I believe, the EOA has its own set of UIC  
20 Class VI rules, which the North Dakota UIC Class VI  
21 rules are based on and are more stringent than. In  
22 the EPA rules, it is my understanding that modeling  
23 and simulation is used to define an area of review  
24 as well.  
25 Q. Is North Dakota's underground injection

293

1 control program regulation for Class VI wells  
 2 adopted pursuant to the Safe Drinking Water Act?  
 3 **A.** It is, and it is more stringent in terms  
 4 that it goes above and beyond and also has  
 5 stipulations for a storage facility area, pore  
 6 space leasing, which the EPA UIC Class VI rules do  
 7 not.  
 8 **Q.** And when the EPA promulgated its Class VI  
 9 rules, the methodologies it used for delineating --  
 10 delineating an area of review were focused on the  
 11 purpose and function of protecting USDWs; right?  
 12 **A.** That's correct, and North Dakota  
 13 Administrative Code is as well. So they define the  
 14 area of review as the region surrounding the  
 15 geologic sequestration project where underground  
 16 sources of drinking water may be endangered by the  
 17 CO<sub>2</sub> injection activities.  
 18 **Q.** And so you're modeling the areal extent of  
 19 the CO<sub>2</sub> plume because the regulations require you to  
 20 do that in order to protect drinking water sources?  
 21 **A.** Modeling the simulation is required to  
 22 evaluate potential impact and endangerment on any  
 23 underground sources of drinking water in which  
 24 you're required to define an area of review where  
 25 you're required to monitor and ensure that you're

294

1 not endangering any underground sources of drinking  
 2 water.  
 3 **Q.** You've noticed -- you've noted a couple of  
 4 times that North Dakota's regulations are more  
 5 stringent than the EPA regulations. That's because  
 6 the EPA regulations require that any state being  
 7 granted primacy have a set of regulations that are  
 8 more stringent than EPA's?  
 9 **A.** I'm not familiar with the specific  
 10 requirements. I know that they can't be any  
 11 lesser.  
 12 **Q.** Okay. I've handed you what has been  
 13 marked as Exhibit LO-83. Can you tell me if you've  
 14 seen that document before?  
 15 **A.** I personally have not.  
 16 **Q.** And when you say "I personally have not,"  
 17 are you aware of others who have that you're  
 18 thinking of?  
 19 **A.** Not specifically, no.  
 20 **Q.** If you look at the bullet points in the  
 21 middle, you'll notice a number of descriptions of  
 22 various data and input files. Is there anything in  
 23 those bullet points that you can identify that was  
 24 not provided to the Industrial Commission by EERC?  
 25 **A.** Upon request from the Commission, the EERC

295

1 had provided the DMR with the .DAT file, which is  
 2 our simulation model input file for CMG, as well as  
 3 our results file in the form of a .SR3, as well as  
 4 shapefiles for the maps that were generated.  
 5 Outside of those data sets, we did not provide any  
 6 additional data to the DMR.  
 7 **Q.** You said for the maps that were provided  
 8 outside of the data. What maps are you referring  
 9 to?  
 10 **A.** The maps in the storage facility area. So  
 11 we provided shapefiles for the storage facility  
 12 boundary, the area of review boundary and such.  
 13 **Q.** Okay. And you're saying you provided the  
 14 shapefiles but not necessarily the particular maps  
 15 you generated from them?  
 16 **A.** Correct.  
 17 **Q.** Okay.  
 18 **A.** Let me correct for that. The maps are  
 19 provided in the permit itself, so we didn't provide  
 20 maps separately. They're within the permit itself.  
 21 **Q.** Okay. That's fair.  
 22 So this first one, all of the input files  
 23 for the PHREEQC model were provided to the  
 24 Commission?  
 25 **A.** No. As I stated, just the .DAT file for

296

1 the numerical simulations which were used to define  
 2 the horizontal and the vertical boundaries of the  
 3 reservoir.  
 4 **Q.** You didn't give them an input file for the  
 5 PHREEQC model?  
 6 **A.** We did not, no. It was not requested.  
 7 **Q.** It's in your possession, though?  
 8 **A.** The EERC has the data.  
 9 **Q.** Sorry. Yes. EERC.  
 10 And EERC is Summit's agent and  
 11 representative with respect to that data?  
 12 **A.** The ownership of the data is governed  
 13 under our specific contracts with Summit including  
 14 our NDA with them that govern data ownership.  
 15 **Q.** EERC has a nondisclosure agreement with  
 16 Summit?  
 17 **A.** Yes.  
 18 **Q.** Who proposed that?  
 19 **A.** I was not involved in those discussions.  
 20 It's a standard -- standard practice we have with  
 21 most of our clients, though.  
 22 **Q.** Is that because your licenses for the  
 23 computer modeling programs are academic licenses?  
 24 **A.** No. Commercial licenses were procured for  
 25 this project as this was a commercially contracted

297

1 project.

2 Q. Did Summit compensate for the cost of the

3 subscriptions for the programs on a commercial

4 basis?

5 A. The EERC procured commercial licenses and

6 the costs of those commercial licenses were billed

7 to Summit. Yes.

8 Q. Okay. Were they temporary subscriptions?

9 A. Yes. So the licenses have a time period

10 associated with them. Commonly, we procure

11 licenses on the order of a month, two-month,

12 three-month licenses, depending on the duration of

13 the time period in the project we need the license

14 to perform the scope.

15 Q. So I want to go back to my prior question.

16 Other than the input model for the PHREEQC model --

17 sorry. Let me start over.

18 Other than the input file for the PHREEQC

19 model, is there anything listed in these bullet

20 points that was not provided by EERC to the

21 Industrial Commission?

22 A. Yes. As I mentioned, the only input data

23 that was provided can be found in your last bullet

24 point in terms of what I would call the

25 simulation -- or the numerical reservoir simulation

298

1 model data decks and the output files. Those were

2 the two pieces of data which I am saying is the

3 .DAT file and the .SR3 file. Those are the only

4 two data sets from this list that were provided.

5 Q. So if you look at the third bullet point,

6 is there anything there that was provided to the

7 Industrial Commission?

8 A. Yes. Thank you for correcting me. So all

9 core analysis data was provided to the Industrial

10 Commission as well as the North Dakota Geological

11 Survey through submission to the North Dakota core

12 library staff. And as required, all well log data,

13 formation testing, fluid analysis was provided

14 as -- as part of completions reports for the three

15 stratigraphic test wells that were drilled. So

16 those were technically provided.

17 Q. When you look through these bullet points

18 on this letter, do you have an understanding of

19 what is being referenced in all of these? Is there

20 anything you don't understand what is being

21 referenced?

22 A. No. I understand.

23 Q. If I asked you to go back to EERC today

24 and sit down and pull together an external hard

25 drive and put this data on that external hard drive

299

1 and give it to me, approximately how long would it

2 take you to do that?

3 A. That would involve the procurement of

4 commercial licenses to access.

5 Q. No. Assuming that you have a commercial

6 license, which you do for all of this, if you

7 needed to go to your office, take all of this data

8 and put it on an external hard drive, how long

9 would that take you?

10 A. Days to weeks.

11 Q. It would take you weeks to put this data

12 on a hard drive? You're telling me that?

13 A. To ensure that we have the proper data, QC

14 it, and we ran multiple iterations.

15 Q. No. I'm asking you to take this data that

16 you understand what all of it is, export it,

17 transfer those files onto an external hard drive,

18 how long?

19 A. One to two weeks.

20 Q. It would take you one to two weeks to

21 transfer those files to a hard drive, but you can

22 start from scratch with publicly available data and

23 replicate and recreate that entire model in four

24 weeks?

25 A. So the publicly available data would be

300

1 coming from single data bases. The way the EERC's

2 file structure and the iterations of our models,

3 the amount of data we have, it's my opinion knowing

4 our data storage, the amount of data we have, the

5 different iterations of modeling simulations done

6 for this project, I would estimate it would take

7 our staff that amount of time to ensure that we had

8 the proper data to be transferred.

9 Q. But you keep saying -- you're saying

10 ensure we have the proper data to be transferred.

11 I'm saying physically how long does it take to

12 click the buttons on the computer to tell the files

13 in the computer to transfer them to an external

14 hard drive and how long does it take the computer

15 to process that file transfer and get it onto the

16 external hard drive? I'm not talking about quality

17 control or review.

18 A. Okay. I can't speculate. I don't know

19 the size of the data in terms of megabytes,

20 gigabytes or the speed to upload it.

21 Q. So you have no idea how long it would take

22 to put this on an external hard drive and send it

23 to us?

24 A. I gave you an estimated range of what I

25 believe it would take.

301

1 Q. Three weeks?

2 A. I believe I said one to two.

3 Q. One to two weeks.

4 And you're still saying that you could

5 also replicate the entire model yourself from

6 public data in just four weeks? Can you explain

7 that?

8 A. I believe I did already answer that.

9 Q. Why does it only take two weeks to

10 transfer the files onto a hard drive but you can

11 take and recreate everything in four weeks?

12 A. I believe I already answered that.

13 Q. And you think that sounds plausible?

14 A. I gave a range and in my opinion of what

15 it would take.

16 Q. Okay. Were you asked to do that at any

17 point?

18 A. No.

19 Q. Were you at any point advised that you

20 might need to make data available to an opposing

21 party in any kind of legal proceeding for Summit?

22 A. I was made aware that data may be

23 requested. Not specifically that it would need to

24 be provided.

25 Q. Were you told that it would not need to be

302

1 provided?

2 MR. BENDER: I'm going to object insofar

3 as it might get into issues on attorney/client

4 privilege. So if any of this was discussed with

5 you while I was present on the phone or whatever or

6 Ty, I'd instruct you not to answer it.

7 MR. BRAATEN: Are you asserting the

8 privilege on behalf of Summit or EERC?

9 MR. BENDER: Summit.

10 Q. (MR. BRAATEN CONTINUING) At any time when

11 there was no representative of Summit, other than

12 Mr. Bender, were you told that -- or there was no

13 representative of Summit present for the

14 conversation, at any point were you told that you

15 would not need to provide data?

16 A. No. I was involved in discussions to

17 determine what it would take for us to provide that

18 data. I was not told we would not have to provide

19 it. I was told as a potential we may have to.

20 Q. Who were you told that by?

21 A. Mr. Lonny Jacobson who is our direct point

22 of communication with the Summit team.

23 Q. Is he with EERC or Summit?

24 MR. BENDER: Your Honor, I'm going to

25 object. We're getting into issues having to do

303

1 with discovery. These issues are before the

2 Commission in a motion to compel. I don't think

3 it's appropriate to try to litigate that here. We

4 haven't had an opportunity to respond to that

5 motion to compel, so I'm going to object to this

6 whole line of questioning.

7 HEARING EXAMINER GARNER: I'm going to

8 overrule.

9 MR. BENDER: Okay. Thank you.

10 Q. (MR. BRAATEN CONTINUING) Who does

11 Lonny -- did you say Lonny Jacobson?

12 A. Yeah.

13 Q. Who does he work for?

14 A. The Energy & Environmental Research

15 Center.

16 Q. Okay. When did you talk to him about the

17 potential of having to provide data?

18 A. Can you clarify "provide data"? To whom?

19 Q. We just talked about a conversation you

20 had had with Lonny in which you indicated that you

21 had not been told that you would not need to

22 provide data. Do you recall that conversation?

23 A. I do. It was after discovery was

24 submitted.

25 Q. And when you say "after discovery was

304

1 submitted," are you referring to the request for

2 data and information that were sent by me on behalf

3 of the intervenors?

4 A. Correct.

5 Q. Okay. What did he ask you about that

6 data?

7 A. What effort and software licenses would be

8 needed to compile that data.

9 Q. And just tell me fully what your response

10 to that was when you talked to him at that time?

11 A. We provided him with a specific list of

12 the software licenses needed, the data as well as

13 things, like I discussed yesterday, about some of

14 the data sets being acquired from data brokers that

15 the specific digitized logs in question are

16 governed by a license agreement.

17 Q. Did you make a determination that because

18 of those license agreements you were unwilling to

19 provide those data sets?

20 A. EERC did not make that determination. We

21 provided information to Summit on what it would

22 take for us to produce those data sets.

23 Q. With respect to everything that's listed

24 in Exhibit 83 in those bullet points, first, EERC

25 has itself all of that data related to Summit's

305

1 project; right?

2 **A.** Yes.

3 **Q.** And has EERC provided all of that data to

4 Summit itself?

5 **A.** I'm unsure. I don't believe we have

6 provided every piece of data yet.

7 **Q.** So Summit doesn't even have all of the

8 data that EERC has?

9 **A.** I can't comment on that with certainty.

10 **Q.** Well, did you just say that EERC has not

11 provided all of this data to Summit?

12 **MS. DOUGLAS:** Could you read back what I

13 stated?

14 (Record read as requested.)

15 **MS. DOUGLAS:** So I believe I said I'm

16 unsure, I'm uncertain about that. I don't have a

17 definitive answer.

18 **Q.** (MR. BRAATEN CONTINUING) Okay. What did

19 Lonny tell you about his conversations with Summit

20 about it?

21 **A.** That we would just not have to provide it

22 at this time. A determination was not made on

23 whether we would be providing it or not.

24 **Q.** At any point were you asked to start

25 compiling the data in the potential event that you

306

1 did have to provide it?

2 **A.** No, because as I mentioned, we'd be

3 required to procure software licenses.

4 **Q.** For what?

5 **A.** To open the model, take out any data. For

6 example, to open the Petrel model, we'd need a

7 Petrel license in order to take out the digitized

8 well logs that are governed by that license

9 agreement.

10 **Q.** So the temporary subscriptions you had for

11 the models, have those lapsed at this point?

12 **A.** They have.

13 **Q.** Okay. So you didn't want to export the

14 data because in order to do that, you would have

15 had to buy another subscription just to export the

16 data out of the models?

17 **A.** Again, the EERC's contracted to perform

18 this scope by Summit Carbon Storage, and so they

19 would have had to approve and authorize us to

20 procure the software.

21 **Q.** And they didn't want to pay for the

22 software?

23 **MR. BENDER:** If you know.

24 **MS. DOUGLAS:** I -- I don't know. I was

25 not involved in those discussions.

307

1 **Q.** (MR. BRAATEN CONTINUING) Well, you're the

2 one that just told me that the need to procure new

3 licenses was part of the reason for not exporting

4 or starting on the export of the data; right?

5 **A.** We would need to be authorized by Summit

6 to start those activities.

7 **Q.** And they never did that?

8 **A.** No.

9 **Q.** Did Lonny ask them if they would like to

10 authorize that?

11 **A.** I'm not privy to those discussions.

12 **Q.** The PHREEQC model is a free model, though,

13 that anyone can use and there would be no barrier

14 with subscriptions to putting all that data

15 together; right?

16 **A.** Correct. As I testified, though,

17 yesterday, I believe that all of the input data

18 used for that is described in the permit itself.

19 **Q.** Have you personally had any direct

20 communications with the employees or members of the

21 North Dakota Industrial Commission about this

22 matter in the last two weeks?

23 **A.** I have not, no.

24 **Q.** Do you know if Lonny has?

25 **A.** I'm not aware if he has or not, but I do

308

1 not believe he has.

2 **Q.** As part of your work on the -- the Summit

3 project, did you do any work related to the surface

4 facilities?

5 **A.** No, I did not.

6 **Q.** There was a comment yesterday that I

7 believe -- and you can correct me if I'm wrong, but

8 I believe you said that these injection wells will

9 not endanger human health. Would you agree with

10 that?

11 **A.** I believe Caitlin testified to human

12 health.

13 **Q.** Okay. And did I hear it right or do you

14 agree that the testimony was that these injection

15 wells, the Class VI wells, will not endanger human

16 health?

17 **A.** (BY MS. OLSEN) I believe I testified to

18 the injection wells have engineering protocol in

19 place that would not endanger human health or the

20 environment in relation to CO<sub>2</sub> injection activities.

21 **Q.** Thank you. In making that statement, did

22 you consider the potential of CO<sub>2</sub> releases from

23 those surface facilities such as valves, blowouts,

24 things of that nature?

25 **A.** That was discussed later on in the permit.

309

1 So my references to that are in relation to the  
 2 injection well and the review that was done on the  
 3 injection well specifically.  
 4 Q. Would it also be accurate to say  
 5 specifically with respect to the things that happen  
 6 downhole at the injection well?  
 7 A. The engineering safeguards in place  
 8 downhole are such that they would prevent migration  
 9 of CO<sub>2</sub> into USDWs or the atmosphere.  
 10 Q. What about the engineering safeguards  
 11 between the terminus point of the Midwest Carbon  
 12 Express Pipeline and the wellhead?  
 13 A. (BY MS. DOUGLAS) We believe we have  
 14 witnesses coming up who are better suited to  
 15 testify to that.  
 16 Q. Okay. We had a discussion yesterday about  
 17 the permeability adjustment with the 2.5  
 18 multiplier. Do you recall that?  
 19 A. I do.  
 20 Q. Did you or Lonny have conversations with  
 21 Summit at any point regarding that issue?  
 22 A. We did.  
 23 Q. And what were those conversations?  
 24 A. So as I testified yesterday, the results  
 25 showed a slightly higher permeability that could

310

1 have been used to justify a higher multiplier. In  
 2 discussions with EERC and Summit, EERC providing  
 3 technical advisement to use a lower value, those  
 4 discussions included discussions with Summit from a  
 5 business case. They wanted to permit the site to  
 6 take a certain amount of CO<sub>2</sub> and store CO<sub>2</sub> within a  
 7 certain area.  
 8 And so through sensitivity modeling and  
 9 business considerations, it was a joint  
 10 determination to use 2.5. Additionally, the  
 11 Commission has approved a permit for the Broom  
 12 Creek Formation that has used 2.5 as well.  
 13 Q. What were the business considerations  
 14 Summit expressed regarding the use of the 2.5  
 15 factor?  
 16 A. Again, I just discussed the amount of CO<sub>2</sub>  
 17 they were targeting and the area -- the area to be  
 18 permitted for CO<sub>2</sub>. I discussed a little bit  
 19 yesterday I didn't want to overestimate the storage  
 20 facility area and then not inject that amount of CO<sub>2</sub>  
 21 to where we would be over-leasing the area and not  
 22 using it.  
 23 Q. So Summit was -- Summit's preference would  
 24 be that that perm adjustment be a lower number  
 25 based on that business consideration?

311

1 A. Through discussions with EERC and Summit,  
 2 the 2.5 multiplier was selected.  
 3 Q. But specifically because in part of  
 4 Summit's business considerations of wanting to keep  
 5 the storage facility as small as possible for the  
 6 amount of CO<sub>2</sub> they want to inject; right?  
 7 A. I wouldn't say it's as small as possible.  
 8 There's just some consideration to not overestimate  
 9 the area needed.  
 10 Q. Because if they reduce the size or the  
 11 boundary of that storage facility, then if there  
 12 are people just on the other side of that, they  
 13 don't need to pay for any property rights for that;  
 14 is that accurate?  
 15 A. Can you repeat that?  
 16 Q. If they reduce the geographic areal extent  
 17 of the storage facility boundary, it reduces the  
 18 number of landowners for whom they need to  
 19 compensate for the use of the property rights and  
 20 that's the business consideration; right?  
 21 A. It's a fact a smaller storage facility  
 22 area would result in less landowners having to be  
 23 permitted. The -- the business consideration  
 24 wasn't related to number of landowners as it was  
 25 area.

312

1 Q. What business interest does Summit have in  
 2 reducing the size or boundary of that storage  
 3 facility if it's not related to not having to  
 4 compensate landowners?  
 5 A. I --  
 6 MR. BENDER: If you know the answer.  
 7 MS. DOUGLAS: I don't know that. I'd have  
 8 to defer to Summit.  
 9 Q. (MR. BRAATEN CONTINUING) And so the  
 10 compensation of landowners is the only thing you  
 11 know of as a business consideration that they would  
 12 have been thinking about in --  
 13 MR. BENDER: I think that's a  
 14 mischaracterization of her testimony. Can you ask  
 15 the question again?  
 16 Q. (MR. BRAATEN CONTINUING) Sure. You've  
 17 testified to the business consideration of the need  
 18 to lease landowners; right?  
 19 A. Yes.  
 20 Q. And that's the only business consideration  
 21 that you've testified to related to Summit's  
 22 consideration of which permeability adjustment  
 23 factor to use?  
 24 A. Yes, but it's not the only business  
 25 consideration. There's also operational costs

313

1 associated with monitoring. If they -- they use a  
 2 permeability multiplier in a larger permeability  
 3 multiplier as we discussed, it may result in a  
 4 larger plume, likely a larger associated pressure  
 5 front, larger AOR that would require additional  
 6 acreage to monitor, meaning additional monitoring  
 7 costs.  
 8 Q. And every five years or so Summit is going  
 9 to rerun the models based on the data acquired thus  
 10 far from that monitoring; right?  
 11 A. Yeah. So the regulations require a  
 12 reevaluation of the AOR determination, no less than  
 13 every five years, meaning that Summit will be using  
 14 operational and monitoring data to history match,  
 15 calibrate their models and confirm their permitted  
 16 AOR and storage facility area are still sufficient.  
 17 Q. What if they found out it wasn't?  
 18 A. So the North Dakota Century Code  
 19 43-05-01-12 --  
 20 MR. BENDER: Let me -- let me correct you.  
 21 That's the Administrative Code.  
 22 MS. DOUGLAS: Thank you for that  
 23 correction.  
 24 Q. (MR. BRAATEN CONTINUING) 43-05-01, and  
 25 what was the next one?

314

1 A. 12. Dash 12.  
 2 Q. Okay.  
 3 A. Okay. This contains the -- the regulation  
 4 language regarding any changes to the storage  
 5 facility area on that reevaluation. If it was  
 6 deemed that the CO<sub>2</sub> would potentially go outside the  
 7 boundaries and Summit determined they needed to  
 8 expand the area, they would need to go through the  
 9 modification process.  
 10 Q. And the result being potentially an  
 11 adjustment to the boundaries of the storage  
 12 facility?  
 13 A. That would require a major modification  
 14 which I believe requires an additional hearing at  
 15 that point if they needed to modify the permitted  
 16 boundaries.  
 17 Q. But if the data indicated that the storage  
 18 facility boundary had not been modeled in a way  
 19 that was accurately reflecting the conditions in  
 20 the last five years, that is a potential result of  
 21 the five-year review, that you redraw the storage  
 22 facility boundary; right?  
 23 A. Potentially.  
 24 Q. And if you did that, what do you do about  
 25 all the payments you've made to the landowners so

315

1 far?  
 2 A. I can't speak to that.  
 3 Q. Is there any process you're aware of that  
 4 would address that?  
 5 A. Again, I believe it would be addressed in  
 6 that major modification proceeding, which would be  
 7 a hearing just like the one we're in today.  
 8 Q. Were there any communications about using  
 9 the 2.5 multiplier between EERC and the Industrial  
 10 Commission?  
 11 A. I can't recall specifically. Potentially  
 12 in their review of initial permit drafts submitted,  
 13 it could have been discussed.  
 14 Q. If you had used 2.7 for the factor instead  
 15 of 2.5, how many more acres of property would have  
 16 been included in the storage facility?  
 17 A. I can't speak to that. We did not run  
 18 that case.  
 19 Q. Okay. Do you have any sense of what that  
 20 might be?  
 21 A. I do not because simulations are a  
 22 complex, multi-physics approach, and so adjusting  
 23 the permeability is not a straight ratio to plume  
 24 size.  
 25 Q. Would you agree that it would result in

316

1 some additional acreage?  
 2 A. Yes, I believe I stated that.  
 3 Q. Just a couple minutes ago you made a  
 4 reference to sensitivity analysis. Do you recall  
 5 that?  
 6 A. Yes.  
 7 Q. What do you mean by "sensitivity  
 8 analysis"?  
 9 A. So the EERC performs sensitivity analysis.  
 10 Some of that is discussed in -- in the permit as  
 11 well. We looked at parameters that affectively --  
 12 or could affect simulation results. In addition to  
 13 that, to the sensitivity analysis, we also did  
 14 uncertainty analysis to look at how various  
 15 properties and distribution of properties, such as  
 16 permeability, could potentially impact the -- the  
 17 model and the simulation results.  
 18 Q. And that's essentially doing quality  
 19 control to test the predictive utility of your  
 20 model?  
 21 A. I wouldn't classify it as testing the  
 22 utility of our model. We did those things to  
 23 determine what parameters we thought were  
 24 appropriate and justifiable for use in the model.  
 25 Q. Could you do that assessment of the

317

1 parameters chosen without running sensitivity  
 2 analysis on the model?  
 3 **A.** Could you repeat that?  
 4 **Q.** Could you assess the propriety of the  
 5 parameters used in the model without running any  
 6 sensitivity analysis on it? Let me ask a different  
 7 question.  
 8 What properties did you run sensitivity  
 9 analysis on?  
 10 **A.** Sensitivity analysis, you said?  
 11 **Q.** Yep.  
 12 **A.** So we ran sensitivity analysis on  
 13 injection rates, bottomhole pressure conditions,  
 14 wellhead temperatures, wellhead pressures.  
 15 **Q.** For what purpose?  
 16 **A.** So on page 3-15, we have a paragraph  
 17 talking about sensitivity analysis.  
 18 **Q.** And you indicate that because of the  
 19 availability of data in the form of well logs, core  
 20 sample data and rock fluid properties, the need for  
 21 typical sensitivity studies of influential  
 22 reservoir parameters has been reduced. Has it been  
 23 eliminated?  
 24 **A.** No, which is why we ran a sensitivity  
 25 analysis.

318

1 **Q.** What's the difference between the  
 2 sensitivity analysis you ran and what you would  
 3 refer to here as typical sensitivity studies?  
 4 **A.** Typical sensitivity studies would vary  
 5 more parameters potentially. So we felt confident  
 6 in site-specific data to define limits of certain  
 7 variables so we didn't need to test those.  
 8 **Q.** Up until you ran the injection test?  
 9 **A.** I -- I don't understand the question.  
 10 **Q.** Well, what were the parameters you were  
 11 comfortable with that you didn't need to run  
 12 sensitivity analysis on?  
 13 **A.** Things like model size, grid cell size,  
 14 boundary conditions. We ran certainty cases on  
 15 property distribution. We didn't necessarily run  
 16 sensitivity cases on property distribution.  
 17 **Q.** Would you have been confident using your  
 18 model to develop this application for Summit with  
 19 running zero sensitivity analysis?  
 20 **A.** I think it points back to your questions  
 21 earlier where you asked about what is the intent of  
 22 running these models to define the storage facility  
 23 area in an area of review taking into consideration  
 24 the required five-year reevaluation, the amount of  
 25 CO<sub>2</sub> that would be injected in -- in that time. I

319

1 believe running a model without sensitivity  
 2 analysis would -- would still provide enough  
 3 insight to be able to safely inject for those -- at  
 4 least those five years until the reevaluation time  
 5 period.  
 6 **Q.** So you're comfortable with a larger margin  
 7 of error in the first five years?  
 8 **A.** Given the amount of CO<sub>2</sub> that will be  
 9 injected, the proposed CO<sub>2</sub> plume size, other  
 10 variables such as the area of review evaluation  
 11 that looked at proximity of legacy wellbores and  
 12 things like that, given the testing and monitoring  
 13 plan, yes.  
 14 **Q.** Because ultimately what we're talking  
 15 about here are pressures and the extent of the  
 16 plume, and given what's going to be injected in the  
 17 first five years, you don't have those same safety  
 18 concerns in those first five years; would that be  
 19 fair?  
 20 **A.** Could you restate that?  
 21 **Q.** You're comfortable with a greater margin  
 22 of error in the first five years; right?  
 23 **A.** Given the amount of CO<sub>2</sub> that would be  
 24 injected, that's -- that's correct, because  
 25 we're -- the model as a whole was used to define a

320

1 boundary which is for 20 years of injection plus a  
 2 period of postinjection plus a buffer. So within  
 3 that five years, we're talking about a much smaller  
 4 area.  
 5 **Q.** And if it's not exact, it's not going to  
 6 be problematic because you're not going to have  
 7 injected enough to get out to that boundary by that  
 8 time anyway?  
 9 **A.** That's my belief. Correct.  
 10 **Q.** Except that you're treating all of the  
 11 landowners inside that boundary exactly the same  
 12 with the first ton that goes down that well and  
 13 everyone on the outside of that line exactly the  
 14 same, meaning they get nothing; right?  
 15 **MR. BENDER:** If -- if you understand how  
 16 the allocation formula works for paying royalties,  
 17 you can answer the question, but if you don't, I  
 18 would not -- I would not answer it if I were you.  
 19 **MS. DOUGLAS:** Could you restate your  
 20 question?  
 21 **MR. BRAATEN:** I can't even remember. May  
 22 I have you read it back, please?  
 23 (Record read as requested.)  
 24 **Q.** (MR. BRAATEN CONTINUING) With respect to  
 25 compensation.

321

1       **A.** I guess I don't understand your question.

2 If the CO<sub>2</sub>'s still in the boundaries, you're in

3 compliance with your permit and you're compensating

4 those within the boundary.

5       **Q.** Regardless of where that CO<sub>2</sub> is actually?

6       **A.** I guess to Mr. Bender's point, I'm not

7 comfortable talking on the compensation rates for

8 landowners or how that's going to be distributed

9 across owners within the area.

10       **Q.** And so to the extent you ran sensitivity

11 analysis on the model and to the extent you're

12 comfortable with the predictive utility of the

13 model in the ways that you used it for this

14 application, it was never a consideration to you

15 how that would affect how landowners get

16 compensated?

17       **A.** This modeling and simulation was done to

18 define the boundaries. Summit made decisions

19 related to compensation of pore space owners.

20       HEARING EXAMINER GARNER: Why don't we

21 take a ten-minute break.

22       (Recessed at 10:00 a.m. and reconvened at

23 10:12 a.m.)

24       HEARING EXAMINER GARNER: We are back on

25 the record. Mr. Braaten, you can resume your

322

1 questioning.

2       **Q.** (MR. BRAATEN CONTINUING) You had

3 mentioned that the Industrial Commission had

4 previously accepted the use of a 2.5 factor. Was

5 that for the Project Tundra project?

6       **A.** For those permits, correct.

7       **Q.** And was the EERC similarly involved with

8 developing those applications?

9       **A.** We were involved, but they had -- we were

10 involved.

11       **Q.** Did someone from EERC make that

12 determination in the prior case? That was a bad

13 question. Let me ask it again.

14       Did someone from EERC make the

15 determination to use the 2.5 permeability

16 adjustment factor in the prior proceedings related

17 to Project Tundra in which EERC was involved?

18       **A.** I can say we participated in those

19 discussions. I can't provide more details on who

20 made the determination and the parties involved as

21 that project is -- is still actively being

22 conducted and is governed by an NDA with Minnkota.

23       **Q.** If you were going to assess someone else's

24 work developing the same models that EERC developed

25 for Summit's application, how would you go about

323

1 assessing those models that were developed by

2 others?

3       MR. BENDER: Do you understand what he's

4 talking about when he says "assess"?

5       MS. DOUGLAS: I was just going to ask,

6 assessing for what purposes?

7       **Q.** (MR. BRAATEN CONTINUING) If you were

8 asked to determine if the inputs and parameters and

9 ways in which the models were set up and run would

10 be acceptable to you in your professional

11 experience such that they would support an

12 application for Class VI wells.

13       **A.** The EERC's been contracted in this

14 capacity before, so I'm speaking from direct

15 experience here. Typically, that review process

16 would come in the form of presentations about

17 inputs and assumptions used in the model by those

18 that created the model. We would evaluate their

19 inputs and assumptions for reasonability and if

20 they're justifiable based on the data sets that

21 they had available to them, and we'd take into

22 considerations Class VI requirements related to

23 compliance. But EERC has not in these roles --

24 where we've been contracted to perform this work

25 before, we have not reviewed people's models or

324

1 rerun their simulations to -- to double-check

2 things in that manner. We've reviewed their inputs

3 and assumptions through presentations, reviews of

4 reports, that type of thing.

5       **Q.** Presentations by whom?

6       **A.** As I mentioned, those that generated the

7 models presented to us their inputs and

8 assumptions. A lot of the information that would

9 have been in those presentations is captured -- for

10 our models that information is similarly captured

11 in the storage facility permits.

12       **Q.** Did you run the model at a 2.7 adjustment

13 factor for permeability?

14       **A.** I just previously mentioned earlier today

15 that we did not.

16       **Q.** Why not?

17       **A.** We didn't feel it was necessary. We made

18 a decision to run it with 2.5 and so we ran it with

19 2.5.

20       **Q.** Would it have cost you anything to run it

21 at 2.7?

22       **A.** Yes, it would have cost us time, so --

23       **Q.** How much time?

24       **A.** -- hours, and it would have cost us time

25 running it with the model license. So we only

325

1 have -- we pay for a model license for a month.  
 2 Running the model would tie up that license for a  
 3 week or so.  
 4 Q. Because that's how long it takes to run  
 5 the model?  
 6 A. A model this size typically could be  
 7 anywhere from two days to a week of run time,  
 8 depending on if any errors are encountered and you  
 9 have to restart the model.  
 10 Q. Meaning that if you had to restart the  
 11 model, it could take up to a week?  
 12 A. Potentially.  
 13 Q. Could it take longer than a week?  
 14 A. Potentially, if there are model errors  
 15 which can't be necessarily predicted when the  
 16 simulator is going to experience a numerical error  
 17 and give an error file.  
 18 Q. But you think an engineer could replicate  
 19 it in four weeks?  
 20 A. You asked me how much time it would take  
 21 to -- to build a model and I said four weeks to  
 22 build the model. That's different than running the  
 23 simulations.  
 24 Q. Okay. So several weeks to replicate the  
 25 model and then at least another week to run it?

326

1 A. Correct.  
 2 Q. So it's your testimony that another  
 3 engineer could both replicate and run that model in  
 4 five weeks?  
 5 A. If the model they built ran and didn't  
 6 experience any numerical errors that they would  
 7 have to troubleshoot.  
 8 Q. Have you ever set up and run a model that  
 9 didn't have any numerical errors that had to be  
 10 troubleshooted?  
 11 A. Myself personally, no.  
 12 Q. There's a binder directly in front of you  
 13 there with a number of tabbed exhibits. If you  
 14 don't mind, can I have you open it to landowner --  
 15 or LO-63.  
 16 A. I'm there.  
 17 Q. Are there features on this map that you  
 18 recognize from the shapefiles submitted by Summit  
 19 to the DMR?  
 20 A. These appear to be the storage facility  
 21 boundaries and the AOR for the three permits.  
 22 Q. Are you also familiar with the maps that  
 23 were produced to indicate the 5-, 10- and 20-year  
 24 pressure increases in the area of the injectors?  
 25 A. Yes, I'm familiar with those.

327

1 Q. And does it appear that one of those is  
 2 also overlaid on this exhibit?  
 3 A. It does appear that way, but it's  
 4 difficult to see given the color scale for that  
 5 layer.  
 6 Q. You are familiar with the maps that were  
 7 generated to indicate the areal extent of the  
 8 pressure increases in the reservoir that were in  
 9 the application; right?  
 10 A. I am.  
 11 Q. And so you'd agree that there will be  
 12 increases in the pressure in the formation well  
 13 outside the boundaries of the storage facility?  
 14 A. Yes. If we may, I'd like to speak off  
 15 page 4-2 of the permit.  
 16 Q. Okay.  
 17 A. Figure 4-1.  
 18 Q. And just for the record, the permit being  
 19 referenced is Exhibit 1A?  
 20 A. Correct. So this map is showing the  
 21 predicted maximum subsurface pressure due to  
 22 injection from the three sites. So this is at  
 23 20 years is where -- of injection is where we see  
 24 the maximum. And as you can see, the pressure  
 25 increase extends beyond the proposed facility

328

1 boundaries in the area of review.  
 2 Q. What variable of Darcy's law limits the  
 3 amount and rate at which you can inject CO<sub>2</sub>?  
 4 A. I don't think I could speak to that  
 5 without the equation in front of me.  
 6 Q. What limits your ability to inject CO<sub>2</sub> into  
 7 these Class VI wells? Let me ask that again.  
 8 What limits the rate and amount of CO<sub>2</sub> that  
 9 you can inject into that reservoir through these  
 10 Class VI wells?  
 11 A. So the bottomhole pressure constraint is  
 12 the -- the regulatory constraint that dictates the  
 13 amount of CO<sub>2</sub> that can be injected into these wells.  
 14 So that bottomhole pressure constraint is derived  
 15 as 90 percent of the fracture pressure gradient.  
 16 So bottomhole pressure is the regulatory constraint  
 17 for the Class VI.  
 18 Q. And the bottomhole pressure is obviously  
 19 directly impacted by existing pressures in the  
 20 formation; right?  
 21 A. That's correct.  
 22 Q. Are you familiar with the intervention by  
 23 Minnkota in this proceeding?  
 24 A. Generally.  
 25 Q. Are you familiar with where the well is

329

1 that they had concerns about?

2 **A.** Yes.

3 **Q.** Is Summit's project going to affect the

4 ultimate bottomhole pressure that limits Minnkota's

5 project?

6 **A.** There will be pressure interference.

7 **Q.** Can I have you go back to Exhibit LO-63?

8 **A.** I'm there.

9 **Q.** Do you see in the legend there there's a

10 number of different colors, and I'll agree with you

11 the color scale's a bit off, but down near the

12 bottom next to Swenson there's a white color. Do

13 you see that?

14 **A.** Yep.

15 **Q.** Do you see the land that sits right in

16 between the areas of review of the three different

17 storage facilities?

18 **A.** Yes.

19 **Q.** Is there going to be pressure interference

20 with Mr. Swenson's lands and pore space?

21 **A.** Define "pressure interference with."

22 **Q.** From the Class VI injectors that Summit is

23 going to inject CO<sub>2</sub> into.

24 **A.** There will be a pressure increase in the

25 reservoir due to injection. The map does show the

330

1 pressure increase will be in the pore space below

2 that land.

3 **Q.** Which would similarly limit the ability to

4 inject into the pore space in that part of the

5 reservoir based on limits to bottomhole pressure

6 that are being affected by that pressure

7 interference by Summit's Class VI wells?

8 **A.** Yes, potentially.

9 **Q.** How much is Summit compensating for that?

10 **A.** They're not required to compensate based

11 on North Dakota Class VI laws. They're required to

12 compensate for use of pore space for CO<sub>2</sub> storage.

13 Injection will cause pressure increase.

14 **Q.** Which reduces the availability of pore

15 space for storage of substances?

16 **A.** No. The pore space is still there. It's

17 not taking the pore space away.

18 **Q.** It reduces the availability of the pore

19 space for the storage of substances?

20 **A.** I don't agree with that characterization.

21 **Q.** Why not?

22 **A.** An operator could come in and still

23 develop that and store CO<sub>2</sub> in that pore space.

24 **Q.** Subject to a bottomhole pressure

25 limitation that has been significantly impacted by

331

1 the three Class VI wells surrounding him; right?

2 **A.** For the amount. Bottomhole pressure might

3 impact potential injection rates, not necessarily

4 the volumes that could be stored there. So one

5 thing to note that while injection operations will

6 increase pressure, when injection stops or if

7 injection rates are limited, after injection stops

8 pressure will die off in the reservoir, and we have

9 a map that demonstrates that.

10 During operations, you know, if Summit's

11 injecting at a lower rate, there will be a lower

12 pressure increase. It could also, you know, shut

13 in wells which would result -- or decrease -- which

14 would result in additional pressure decreasing

15 there. The pressure increase is temporary, but a

16 developer could come in and still inject CO<sub>2</sub> there.

17 **Q.** And you show equilibrium of pressures ten

18 years after operations; right?

19 **A.** The permit has a map that demonstrates

20 this pressure decrease. It doesn't represent

21 pressure equilibrium.

22 **Q.** What would you project that to be in time

23 from the end of operations?

24 **A.** We did not simulate that.

25 **Q.** Would you expect it to be more than

332

1 20 years?

2 **A.** We'd have to simulate that.

3 **Q.** Significant pressure interference for at

4 least 30 years of Mr. Swenson's pore space caused

5 by the Summit project?

6 **A.** Again, it would limit injection rates. It

7 wouldn't limit the total volumes that could be

8 stored on his land. So to answer your question,

9 there would be a pressure increase of approximately

10 500 psi up to a thousand psi increase over the

11 current pressure of the Broom Creek today for up to

12 30 years.

13 **Q.** What's the economic incentive for

14 injecting CO<sub>2</sub> into the pore space?

15 **A.** Can you clarify that question?

16 **Q.** Is Summit being paid in the form of tax

17 credits by the federal government to inject CO<sub>2</sub> in

18 the pore space?

19 **A.** I believe Wade testified yesterday as to

20 the -- the economic drivers behind their project.

21 I can't answer questions on that.

22 **Q.** Will the 45Q credits be in place in the

23 same form and amount 30 years from now?

24 **MR. BENDER:** Objection. Calls for

25 speculation.

333

1 HEARING EXAMINER GARNER: Overruled.  
 2 MS. DOUGLAS: As written today?  
 3 Q. (MR. BRAATEN CONTINUING) Correct.  
 4 A. No. But as I mentioned, while Summit's  
 5 operating, there's nothing that would preclude an  
 6 operator from coming in and injecting to store CO<sub>2</sub>.  
 7 The same amount of pore space would still exist.  
 8 They would just have to inject at lower injection  
 9 rates, but they could still get the same amount of  
 10 CO<sub>2</sub> in that pore space over time.  
 11 Q. How much longer amount of time?  
 12 A. We have not run that model.  
 13 MR. BRAATEN: Real quick, I apologize, on  
 14 the prior exhibit, LO-83, I did not move to admit,  
 15 and I would move to admit LO-83.  
 16 MR. BENDER: Did you say 83 or 63?  
 17 MR. BRAATEN: 83.  
 18 MR. BENDER: Oh, that one. I'm sorry.  
 19 MR. BRAATEN: I'm skipping back.  
 20 HEARING EXAMINER GARNER: Any objections?  
 21 MR. BENDER: No objection.  
 22 HEARING EXAMINER GARNER: The exhibit is  
 23 admitted.  
 24 Q. (MR. BRAATEN CONTINUING) You talked  
 25 yesterday briefly about the area of review and

334

1 corrective action. Did you look at the old wells  
 2 that have been P and A'd around the area of the  
 3 storage facilities?  
 4 A. (BY MS. OLSEN) We did.  
 5 Q. What did you look at in those wells?  
 6 A. Particular to this permit, there are no  
 7 legacy wells in this area.  
 8 Q. Within the area of review?  
 9 A. Within the area of review for the TB  
 10 Leingang, that's correct.  
 11 Q. Did you look at the legacy wells that are  
 12 closest but not within your area of review?  
 13 A. We did not evaluate wells outside of the  
 14 area of review.  
 15 Q. Okay. Are you aware of the Fritz-Lutz 1  
 16 well?  
 17 A. I don't believe that was in the area of  
 18 review.  
 19 Q. Are you aware of where it is in relation  
 20 to the area of review?  
 21 A. Which area of review?  
 22 Q. Any of them.  
 23 A. Not at this moment.  
 24 Q. And are you familiar with the Richter 1  
 25 well?

335

1 A. I recall the Richter 1 well.  
 2 Q. Did you assess that well in any way as  
 3 part of your work on the Summit project?  
 4 A. No. Class VI rules only require  
 5 evaluation of wells within the area of review.  
 6 Q. Can I have you turn to Figure 4-1, the  
 7 pressure map we were taking a look at a moment ago.  
 8 A. (BY MS. DOUGLAS) We're there.  
 9 Q. Are the dots on this pressure map  
 10 indicative of wells?  
 11 A. Yes.  
 12 Q. Are you generally familiar with the two  
 13 wells I mentioned being to the southwest of the  
 14 storage facility represented on this map? Sorry.  
 15 I don't know who I'm talking to. Either of you who  
 16 knows.  
 17 A. Not based on the current map. They're not  
 18 labeled or have well names, so I can't identify  
 19 them based on this map.  
 20 Q. And just based on your familiarity with  
 21 your location, does it appear that the -- let me  
 22 ask a different question.  
 23 Based on your familiarity with the Richter  
 24 1 well, is it your understanding that that well is  
 25 generally to the south or southwest of the storage

336

1 facilities?  
 2 A. (BY MS. OLSEN) I don't recall that  
 3 information, but if you say it is.  
 4 Q. So if we look directly south from the SCS1  
 5 injection wells that is indicated on the map with  
 6 the green triangle, if you go south of that until  
 7 you're outside of the area of review and storage  
 8 facility boundaries, almost directly south in blue  
 9 there is a dot and it is a dot directly south of  
 10 the green triangle and within the area that I  
 11 believe is indicated as a 400 psi pressure  
 12 differential. Do you see where I'm pointing at  
 13 that?  
 14 A. I do.  
 15 Q. Does that well have surface casing below  
 16 the depth of the uppermost freshwater aquifer or  
 17 U.S. drinking water aquifer?  
 18 A. I don't have that information in front of  
 19 me.  
 20 Q. Have you assessed the integrity of the  
 21 plugs on that well?  
 22 A. For this permit, only wells within the  
 23 area of review are required to be assessed.  
 24 Q. I understand. But as a factual matter  
 25 regardless of a requirement, did you assess the

337

1 integrity of the plugs on that well?

2 **A.** I did not.

3 **Q.** And did EERC assess that?

4 **A.** I don't recall.

5 **Q.** Do you know if Summit assessed that?

6 **A.** I don't know.

7 **Q.** You'd agree that the reservoir pressures

8 in the area of that well are going to increase by

9 400 psi based on your modeling as indicated on this

10 map at Figure 4-1?

11 **A.** That's correct.

12 **Q.** Did you run an MIT on the well?

13 **A.** We did not. I assume the well is plugged.

14 **Q.** When was it plugged?

15 **A.** I don't know. Most of the wells in this

16 area are vintage and drilled in the '70s. That's

17 my assumption.

18 **Q.** Or even earlier?

19 **A.** Sure.

20 **Q.** Some of them plugged before the 1950s

21 even?

22 **A.** Perhaps.

23 **Q.** So plug job that's 70 years old now?

24 **A.** Seven years?

25 **Q.** 70.

338

1 **A.** Perhaps.

2 **Q.** And it was plugged before we had the oil

3 and gas conservation laws on the books in North

4 Dakota we have now?

5 **A.** Plugging rules were different, yep.

6 **Q.** How much time and expense would be

7 required to pressure up an MIT and run it at 400

8 psi on that well?

9 **A.** (BY MS. DOUGLAS) That -- that well's

10 abandoned and so it's -- it's not accessible at the

11 surface. You'd have to redrill out the plugs and

12 recomplete it to get any information out of it.

13 **Q.** Was there an assessment of whether that

14 might need to be replugged?

15 **A.** No. Again, Caitlin's testified and stated

16 here a couple times we're only required to evaluate

17 the wells in our AOR.

18 I would like to say -- point out, we did

19 look at potential leakage or ribbing of leakage in

20 that well. So if I could direct you to page 3-41

21 to map -- to the map in Figure 3-2. So we modeled

22 a case here assuming hypothetical leakage pathways,

23 again, hypothetical leakage pathways, meaning that

24 there's a leakage pathway through plugs for this

25 model. If there was a leakage pathway due to the

339

1 pressure increase -- maximum pressure increase from

2 injection, we're estimating over the life of the

3 project only .005 meters cubed of formation fluid

4 could leak up through that well, again assuming

5 it's leaking, into overlying formations.

6 So, again, we have not evaluated that

7 particular well. It's outside of our AOR. We

8 don't believe that there is endangerment of USDWs

9 due to leakage.

10 **Q.** But if the plugs were bad, your modeling

11 indicates that fluids from the formation would

12 travel up that well in some amount to the

13 freshwater drinking aquifer that is not protected

14 by a surface casing?

15 **A.** The Broom Creek as it sits today is

16 overpressurized. If those plugs were bad because

17 the Broom Creek is overpressurized, fluids would

18 already be flowing.

19 **Q.** How much psi would it take to bust those

20 plugs?

21 **A.** I don't have that calculation.

22 **Q.** So you don't know if the pressure

23 formation would cause those plugs to burst right

24 now?

25 **A.** (BY MS. OLSEN) Class G cement is

340

1 typically rated to 5,000 psi.

2 **Q.** Is that what they used in 1945?

3 **A.** I'd have to look at the plugging records

4 to look at that specific well.

5 **Q.** Do they have plugging records?

6 **A.** I don't know.

7 **Q.** Do you have any familiarity with how wells

8 were plugged in North Dakota in the 1940s?

9 **A.** Generally, yes.

10 **Q.** Based on what?

11 **A.** My experience working for the Department

12 of Mineral Resources.

13 **Q.** If you put a Class VI injector on the

14 Swenson land and ran it at the same rates and

15 volumes that Summit is going to run its wells,

16 would that have any impact on Summit's project?

17 **A.** (BY MS. DOUGLAS) Yes, potentially.

18 **Q.** Do you think Mr. Swenson could get a Class

19 II disposal well into the Broom Creek Formation

20 permitted on his land in between the three Class VI

21 injectors?

22 **A.** So my understanding is that the -- the

23 Commission -- and I might not be using the proper

24 terms -- but if they grant this permit, they will

25 define this as a field, and so my understanding is

341

1 Mr. Swenson could permit the Class II or a Class VI  
2 well on his land. He would have to work with the  
3 Commission and make sure that he abides by any  
4 Commission orders related to those field rights.  
5 Q. Given your knowledge of the technical  
6 feasibility of that, do you think the Commission's  
7 going to grant that permit?  
8 A. I think development of any subsurface  
9 resources in the state require the cooperation of  
10 many entities, including landowners and project  
11 developers.  
12 Q. How is Summit cooperating with Mr. Swenson  
13 to allow him to develop his pore space subject to  
14 the pressure increases caused by Summit's Class VI  
15 wells?  
16 A. Is Mr. Swenson actively trying to develop  
17 those?  
18 Q. Do you have the answer to my question?  
19 A. I don't have any knowledge of Mr. Swenson  
20 actively trying to develop those.  
21 Q. And so if Summit is preventing him from  
22 developing those, what does it matter if he's  
23 actively trying to develop them right now or not?  
24 A. Could you clarify how Summit's --  
25 Q. Why are you saying it's significant or

342

1 relevant whether or not Mr. Swenson is actively  
2 trying to develop a Class II well?  
3 A. Your question you asked me, I believe --  
4 and it can be repeated back here, but I believe you  
5 asked why is Summit preventing Mr. Swenson from  
6 developing his pore space.  
7 Q. Okay. Well, if I asked that, I apologize.  
8 My intended question is has Summit worked with  
9 Mr. Swenson or reached out or talked to him about  
10 how their operations are going to affect his  
11 ability to use his pore space?  
12 A. I was not privy to the discussions between  
13 Summit and Mr. Swenson.  
14 Q. Would you agree there's going to be about  
15 a 900 psi pressure increase in the pore space in  
16 the reservoir under Mr. Swenson's land?  
17 A. Approximately, yes.  
18 Q. Is the max bottomhole pressure about  
19 3,000, 3,500? What's the max bottomhole pressure  
20 on the BK Fischer?  
21 A. It's on the range of, yeah, 3,600 psi to  
22 3,800 psi, depending on what site-specific data --  
23 Q. So you're going to increase the pressure  
24 in his pore space by approximately 25 percent of  
25 the max bottomhole pressure?

343

1 A. I've not done the specific calculations,  
2 but if you're saying that's what it is --  
3 Q. Is 900 approximately one-fourth of 3600?  
4 A. Yep.  
5 Q. There was testimony yesterday about the  
6 delineation of the CO<sub>2</sub> plume boundary, and I believe  
7 the testimony was that it was determined to be at a  
8 5 percent concentration of CO<sub>2</sub> in the aquifer as the  
9 edge of the CO<sub>2</sub> plume; is that right?  
10 A. That's correct.  
11 Q. And can you tell me again why 5 percent?  
12 A. Yes. So there's several studies out there  
13 that suggest that 5 percent is the detection limit  
14 for monitoring techniques, particularly 3D seismic.  
15 Q. Would it be fair and accurate to say that  
16 at the bottom of the injector, bottomhole, you've  
17 got about a hundred percent CO<sub>2</sub> in the formation,  
18 would that be fair, during injections?  
19 A. Right -- right at the injection well?  
20 Q. Right. I'm just saying if you start  
21 aground like right at -- where you're injecting, we  
22 can make an assumption that the CO<sub>2</sub> is a hundred  
23 percent of the fluid right there; right? Within  
24 one inch of the bottom of the well -- actually, let  
25 me ask you something. Are they perforating the

344

1 well?  
2 A. They will be perforating the well.  
3 Q. Okay.  
4 A. Or -- yes, they will be perforating the  
5 well.  
6 Q. Is there going to be a lateral?  
7 A. No.  
8 Q. Okay. So within the wellbore we're at a  
9 hundred percent CO<sub>2</sub>?  
10 A. Correct.  
11 Q. And you're indicating the edge of the  
12 plume is 5 percent CO<sub>2</sub>?  
13 A. Correct.  
14 Q. Does the concentration of CO<sub>2</sub> become more  
15 diluted in a linear manner as you move away from  
16 the wellbore?  
17 A. No, not necessarily. I'd like to point  
18 you to page 3-25 and 3-26.  
19 Q. Okay.  
20 A. So these are showing cross-sections  
21 through the simulated plume. These are  
22 representing the gas saturation in the model cells.  
23 So saturation of CO<sub>2</sub> is also dictated by the  
24 porosity and permeability of the rock, so you'll  
25 note -- so, again, this has the 5 percent

345

1 saturation cutoff. You'll note along the wellbore  
 2 you see an area of white, so this is on Figure  
 3 3-15a. Even at the wellbore saturation is below  
 4 5 percent due to the porosity and permeability in  
 5 that model layer.  
 6 So it's -- it's dependent on porosity and  
 7 permeability and how the CO<sub>2</sub> would flow in the  
 8 formation.  
 9 And just a point of clarification,  
 10 saturation will never be a hundred percent. CO<sub>2</sub>  
 11 injection can never move all of the formation fluid  
 12 out of -- out of the rock.  
 13 Q. Okay. Thank you. If we held constant  
 14 permeability and porosity, would the CO<sub>2</sub> become more  
 15 diluted in a linear or logarithmic function as you  
 16 move away from the wellbore?  
 17 A. Not directly linear or logarithmic, but  
 18 generally it would. At the edges of the plume is  
 19 where you see more mixing of CO<sub>2</sub> with -- with brine.  
 20 Q. So, generally speaking, if we were to plot  
 21 the reduction in CO<sub>2</sub> concentration on a linear scale  
 22 out to 1 percent, and let's pretend we can measure,  
 23 would the area of that line representing 6 percent  
 24 to 1 percent be much longer than the rest of the  
 25 line?

346

1 A. Based on the volumes being simulated here,  
 2 no, it would be much, much smaller because you'd  
 3 have a larger area with higher saturation.  
 4 Q. Would the area over which the saturation  
 5 changes from 10 percent to 0 percent be  
 6 significantly longer than the area over which it  
 7 changes from 20 percent to 10 percent?  
 8 A. I can't really make an educated guess on  
 9 that --  
 10 Q. What would you expect?  
 11 A. -- at this time.  
 12 Q. Would you expect that area from 10 to  
 13 0 percent to take longer or be longer than the area  
 14 from 10 to -- or 20 to 10 percent based on what you  
 15 know about how it dilutes as it moves away from the  
 16 wellbore as an engineer?  
 17 A. Again, I don't think I could -- could  
 18 speak on that.  
 19 Q. Okay. And the 5 percent, again, though,  
 20 was chosen because that's essentially the detection  
 21 limit and that's the lowest limit you can detect  
 22 with running the models? Sorry. Let me start  
 23 over.  
 24 The 5 percent is used because that is the  
 25 detection limit from the seismic?

347

1 A. Correct. Based on published studies --  
 2 Q. Okay.  
 3 A. -- from other carbon capture and storage  
 4 sites that are in operation.  
 5 Q. But you agree that's not actually the  
 6 border or the edge of where the actual CO<sub>2</sub> being  
 7 injected is traveling to?  
 8 A. As discussed, it's the boundary we can  
 9 detect.  
 10 Q. How?  
 11 A. With seismic.  
 12 Q. But only to a 5 percent concentration of  
 13 CO<sub>2</sub>; right?  
 14 A. Yep.  
 15 Q. So we know that there is CO<sub>2</sub> outside of  
 16 that boundary if that boundary is set at 5 percent.  
 17 It sure doesn't go from 5 percent to 0 within a  
 18 millimeter; right?  
 19 A. There's the potential for CO<sub>2</sub> to be --  
 20 Q. It's not just potential. Just as a matter  
 21 of physics, there's obviously CO<sub>2</sub> outside of that  
 22 boundary; right?  
 23 A. Yeah.  
 24 Q. Is there a plan to put two different  
 25 wellbores in at each injector site?

348

1 A. That's my understanding.  
 2 Q. Is the intent to do any kind of  
 3 directional drilling with the wellbores?  
 4 A. I believe so, but I can defer questions of  
 5 that to a witness who can answer in more detail.  
 6 Q. Okay. Did someone generate a PHI-H map  
 7 for the reservoir in the area -- areas of review?  
 8 A. I don't believe one was provided in the  
 9 permit and I'm not sure if one was produced.  
 10 Q. Would the -- would EERC have produced the  
 11 PHI-H map if one was produced?  
 12 A. Yes.  
 13 Q. Can I have you look at Figure 3-1?  
 14 A. I'm there.  
 15 Q. It says the distributed PHIE property  
 16 along a roughly west-east cross-section. It seems  
 17 obvious, but I want to make sure I understand. The  
 18 little callout in the upper left with the red line,  
 19 does that indicate the cross-section?  
 20 A. That does. The red line's the path of the  
 21 cross-section.  
 22 Q. Okay. Do you see the vertical line for  
 23 the Archie Erickson 2?  
 24 A. I do.  
 25 Q. And do you see just to the left of that

349

1 there's a couple areas with some fairly significant  
 2 pockets of red, I'll call them?  
 3 **A.** Yep.  
 4 **Q.** And then if we look over at the Milton  
 5 Flemmer, just to the right of that there's an area  
 6 that is mostly blue and green with just a little  
 7 yellow. Do you see where that is?  
 8 **A.** I do.  
 9 **Q.** If we took a hundred-foot diameter core in  
 10 that area with the red splotches just to the left  
 11 of the Archie Erickson and then we took a  
 12 hundred-foot diameter core in that area with the  
 13 blue and green just to the right of the Milton  
 14 Flemmer, would one of those cores contain more  
 15 available pore space for the storage of substances  
 16 than the other?  
 17 **A.** Yes. If we're -- we're -- in a  
 18 hypothetical case if we're assuming that this model  
 19 is a hundred percent accurate and represents the  
 20 rocks there, where you have higher porosity, you're  
 21 going to have more pore space just mathematically.  
 22 **Q.** And there's also a difference -- if we did  
 23 that same exercise, there's also a difference in  
 24 the amount of pore space available for storage  
 25 based on the vertical extent of the formation;

350

1 right?  
 2 **A.** You're saying based on the thickness?  
 3 **Q.** Correct.  
 4 **A.** Yes. That would be a factor in that  
 5 calculation -- sorry. That would be a factor of  
 6 the calculation, would be height, if you're  
 7 calculating volume.  
 8 **Q.** And would a PHI-H map show us  
 9 geographically what the various values were, taking  
 10 into account the porosity as well as the thickness?  
 11 **A.** It would for the realization of the model  
 12 in the permit. One thing to understand, while we  
 13 use site-specific data as controls, we used  
 14 variograms and other means to distribute properties  
 15 to the best of our ability. It doesn't mean that  
 16 the model will be a hundred percent accurate, which  
 17 is why we have that five-year reevaluation period  
 18 in case our model -- or the actual subsurface  
 19 geology is slightly different than our model, so  
 20 that we can account for those differences in how  
 21 bottomhole pressure is responding to injection as  
 22 well as how the CO<sub>2</sub> plume is migrating in the  
 23 reservoir.  
 24 **Q.** But if we look at Figure 3-1 in that area  
 25 of red just to the left of the Archie Erickson,

351

1 you're not saying that the model just randomly  
 2 allocated an area of higher porosity to that  
 3 specific location based on, you know, a factor of  
 4 variability. It's doing that because it is  
 5 predicting that that actually has more porosity  
 6 there in that specific location; right?  
 7 **A.** It's being informed by control points, but  
 8 we did uncertainty analysis looking at a hundred  
 9 different cases for property distribution -- sorry,  
 10 not a hundred -- a thousand different cases for  
 11 property distribution. We chose the one P50 case  
 12 which we feel is the most likely.  
 13 **Q.** And you couldn't have done that unless you  
 14 were able to do sensitivity analysis?  
 15 **A.** Uncertainty analysis.  
 16 **Q.** Sorry.  
 17 **A.** But, yes, that's correct. Those are the  
 18 steps we performed to determine which model we had  
 19 the highest confidency in being the most probable  
 20 case.  
 21 **Q.** And it's important to do that; right?  
 22 **A.** When you're the operator looking to define  
 23 the boundaries of your storage facility area, it's  
 24 important as you will be obligated to operate and  
 25 CO<sub>2</sub> must stay within those bounds.

352

1 **Q.** What if you're the landowner with pore  
 2 space on the outside of that boundary, is it  
 3 important for them?  
 4 **A.** I don't understand what context it would  
 5 be important for them. The operator's required to  
 6 keep CO<sub>2</sub> within their boundaries. If CO<sub>2</sub> is going  
 7 to go outside their boundaries, they're in  
 8 noncompliance with their permit. If they have to  
 9 adjust their boundaries, they are going to have to  
 10 amalgamate or acquire that additional pore space  
 11 outside, go through this major modification and  
 12 hearing process to get that approved.  
 13 **Q.** With respect to the compensation being  
 14 paid to the landowners whose property is being used  
 15 by Summit, is there any consideration given to the  
 16 actual porosity or actual thickness of their pore  
 17 space?  
 18 **A.** I believe Summit chose to treat all  
 19 landowners within the storage facility area  
 20 equally, meaning that the compensation is based by  
 21 a total amount of CO<sub>2</sub> injected and they're given the  
 22 proportional payment for the amount of land they  
 23 have within the storage facility area. They did  
 24 not use a volumetric approach. So in a volumetric  
 25 approach landowners would be paid for the actual

353

1 amount of CO<sub>2</sub>. Why that's not done is it -- it  
 2 would -- it would benefit the landowners directly  
 3 around the injection well, so Summit chose to treat  
 4 all landowners within the storage facility area  
 5 equally instead of --  
 6 Q. Accurately?  
 7 A. I don't agree with that classification.  
 8 Q. Well, they're not paying the landowners  
 9 based on the amount of CO<sub>2</sub> being stored in their  
 10 pore space; right?  
 11 A. Summit's paying for the use of the pore  
 12 space, so they are leasing the pore space.  
 13 Q. Are they leasing the pore space from my  
 14 clients?  
 15 A. My understanding is that your clients are  
 16 outside of the storage facility area boundary, so  
 17 their pore space is not being leased for storage of  
 18 CO<sub>2</sub>.  
 19 Q. Can I have you flip back to Landowner 63.  
 20 A. I'm there.  
 21 Q. If you see the different colors next to  
 22 the names and you look at the map, there are blocks  
 23 of colors both within and without the storage  
 24 areas, areas of review and outside of those  
 25 boundaries?

354

1 A. Yep.  
 2 Q. I apologize. Bear with me one moment. I  
 3 think I may be done.  
 4 Is there a place in the permit application  
 5 where thickness or porosity is broken down by  
 6 landowner or tract?  
 7 A. No.  
 8 Q. Okay. Whether it's in the application or  
 9 not, was that ever done or attempted by EERC, to  
 10 your knowledge?  
 11 A. No.  
 12 Q. How does it affect the accuracy of your 3D  
 13 seismic if you are not doing it on certain tracts?  
 14 A. It has the potential to reduce the  
 15 resolution and quality of the seismic data.  
 16 Q. And does it reduce the resolution and  
 17 quality just for that area specifically or does  
 18 that lack of seismic in that area impact the  
 19 quality of the other data?  
 20 A. So the quality of the seismic data is  
 21 dependent on the fold as well as the source  
 22 receiver offsets, so it's dependent -- the quality  
 23 of the image is dependent on the fold within each  
 24 area. Fold is lower when you aren't allowed to  
 25 have source and receivers in a specific tract.

355

1 However, if you have sufficient source receiver  
 2 offset, the quality of data will be lesser for  
 3 shallower formations, but you would -- depending on  
 4 the side of the land where you don't have source  
 5 and receivers, you may still have source --  
 6 sufficient source and receiver offset to produce  
 7 high-quality images with a seismic of the deeper  
 8 formations.  
 9 Again, that's going to be dependent on the  
 10 depth of the reservoir, the source receiver offset  
 11 and the area where receivers and source weren't  
 12 allowed to be placed or operated.  
 13 MR. BRAATEN: I don't have any further  
 14 questions.  
 15 HEARING EXAMINER GARNER: Any questions  
 16 from the staff?  
 17 **EXAMINATION**  
 18 **BY MS. MADCHE:**  
 19 Q. I have some questions. I would like to  
 20 start out with some of the questions that were  
 21 deferred to this group from earlier. Let's see  
 22 here.  
 23 So you had given testimony on the location  
 24 of coal reserves and coal leases within the three  
 25 storage facility permits. Would you be able to

356

1 answer approximately how close mining activity  
 2 currently is from proposed equipment, aboveground  
 3 infrastructure for the three facilities? So to  
 4 repeat, for each three storage facility permits,  
 5 what's the proximity to current mining activity to  
 6 date from the aboveground surface infrastructure?  
 7 And if you need to defer that, that's fine. Just  
 8 let me know.  
 9 A. (BY MS. DOUGLAS) All right. I'm going to  
 10 point you to the Exhibit 2.  
 11 MR. BENDER: It's 1B.  
 12 MS. DOUGLAS: 1B. Exhibit 1B, page 280.  
 13 This is the Archie Erickson/BK Fischer permit.  
 14 Q. (MS. MADCHE CONTINUING) Yep.  
 15 A. Figure 2-50. So these reflect the closest  
 16 mining operations from the Coyote Creek and Beulah  
 17 Mine which are the closest mining operations to any  
 18 of the three storage facility areas. And you can  
 19 see on this map green shows future mining  
 20 activities and brown shows mined out -- or areas  
 21 where mining has already taken place. And you can  
 22 see the approximate distance from those to the  
 23 proposed injection sites as well as the flowlines.  
 24 So here the scale we're looking at, I believe those  
 25 are townships. So it's approximately three to

357

1 four miles, the surface facilities are, from the  
 2 future mining activities.  
 3 Q. And just to confirm, yesterday in your  
 4 testimony you had stated that there were no active  
 5 coal leases where surface infrastructure was  
 6 planned for the three facilities; correct?  
 7 A. Correct.  
 8 Q. So earlier I had asked a question on why  
 9 the Milton Flemmer 1 was used as the type log in  
 10 Article 1.15 for all three storage agreements.  
 11 Could you elaborate as to why?  
 12 A. I can. So the Milton Flemmer well  
 13 penetrates the entire thickness of the Amsden, so  
 14 it was used as the type log so that we could  
 15 accurately represent the depth to the top and the  
 16 bottom of the Amsden and the thickness. The other  
 17 two stratigraphic test wells drilled for the other  
 18 storage facility areas do not penetrate the entire  
 19 Amsden. That is why the Milton Flemmer 1 well was  
 20 used as the type log for all three storage  
 21 facilities.  
 22 Q. When it comes to the royalty payments,  
 23 would you agree that due to the lack of history  
 24 matching data that we have that there would be more  
 25 uncertainties to allocating via volumetric versus

358

1 the tract participation as Summit has chosen to go  
 2 forward with?  
 3 A. I would agree with that. I'd also add  
 4 that there are limitations for using monitoring  
 5 methods to quantify the amount of CO<sub>2</sub> in a given  
 6 area in the subsurface. Monitoring methods such as  
 7 3D seismic and time lapse changes that can be  
 8 captured in 3D seismic are susceptible to both  
 9 changes in pressure and changes in fluid  
 10 saturation, so you would not be able to accurately  
 11 separate out effects of pressure from CO<sub>2</sub> saturation  
 12 in order to assure you're compensating landowners  
 13 using a volumetric approach.  
 14 Q. So now I'm going to move forward to  
 15 questions that I have from Section 2 on the  
 16 geologic exhibits. For the storage facility permit  
 17 for the TB Leingang, what was the maximum pressure  
 18 applied during the microfracture testing in the  
 19 Milton Flemmer 1 well within the Spearfish/Opeche  
 20 Formation?  
 21 A. I'll defer that question to a later  
 22 witness who was involved in those tests.  
 23 Q. Would you be able to state who it's being  
 24 deferred to specifically?  
 25 A. Ms. Jean Oddy.

359

1 Q. Okay. As it pertains to all three of the  
 2 storage facility permits and to their stratigraphic  
 3 test wells, can you explain how you determined  
 4 which sand package within the Broom Creek you  
 5 target for your microfracture in situ stress test  
 6 to determine the fracture propagation pressure  
 7 gradient?  
 8 A. I'll also have to defer that to Ms. Oddy.  
 9 Q. Okay. For all three of the applications  
 10 and the three stratigraphic test wells, was the  
 11 next dissipation zone above the injection zone, so  
 12 your Inyan Kara, sampled at all three facilities?  
 13 A. I believe so, yes.  
 14 Q. And did those samples show evidence that  
 15 the formations are currently hydraulically  
 16 separated?  
 17 A. That's our interpretation of the data,  
 18 yes.  
 19 Q. And in all three storage facility permits,  
 20 has any Fox Hills wells been sampled?  
 21 A. (BY MS. OLSEN) There's historical  
 22 groundwater sampling data in Appendix B throughout  
 23 each of the three permits. Plans to test those  
 24 wells in the baseline sampling plan are described  
 25 in Section 5 and will be testified to later.

360

1 Q. So just to confirm, you reviewed any data  
 2 that already existed which would be in Appendix B,  
 3 but no baseline sampling has started in the Fox  
 4 Hills?  
 5 A. That's correct.  
 6 Q. Core plugs taken from the base of the  
 7 upper confining zone in the Milton Flemmer 1 well  
 8 had a fairly high anhydrite weight percentage,  
 9 around 86 to 98 percent. Similar in the Archie  
 10 Erickson, there was around 95 and a half percent  
 11 shown. Did geochemical modeling indicate that it  
 12 was likely that the boundary between the two  
 13 formations would dissolve due to that percentage of  
 14 anhydrite?  
 15 A. (BY MS. DOUGLAS) Geochemical modeling  
 16 done for the upper confining zone showed little to  
 17 no dissolution of anhydrite due to geochemical  
 18 reactions with the modeled CO<sub>2</sub>.  
 19 Q. And would that apply for both the TB  
 20 Leingang and the BK Fischer?  
 21 A. That's correct.  
 22 Q. So I'm going to ask some questions related  
 23 to the formation imaging logs. Would you be the  
 24 correct witness to answer for all three storage  
 25 facility permit applications? I only ask because

361

1 it was discussed that you were going to have  
 2 another witness at the end that would talk about  
 3 differences between the three facilities, or are  
 4 you good with answering them?  
 5 **A.** We're good with answering the questions to  
 6 all three.  
 7 **Q.** Okay. So in the Milton Flemmer 1 well,  
 8 both in the formation imaging logs and within the  
 9 thin sections specifically where high anhydrite  
 10 content existed, there were a handful of fractures  
 11 that were shown. Can you please explain why these  
 12 fractures don't pose a risk to the storage  
 13 facility?  
 14 **A.** You said for the upper confining zone?  
 15 **Q.** Yes.  
 16 **A.** Could you point to specifically what depth  
 17 interval?  
 18 **Q.** So in figure 2-33 and into 2-34 in the TB  
 19 Leingang application, it shows that there are a  
 20 handful of resistive litho-bound fractures present  
 21 in the Opeche/Spearfish interval. Why are these  
 22 fractures not a concern as far as containment?  
 23 **A.** They're not a concern for containment  
 24 because they're commonly filled. In the case of  
 25 the resistive bound fractures, they're commonly

362

1 filled with anhydrite.  
 2 **Q.** So they wouldn't have transmissibility to  
 3 have CO<sub>2</sub> move through them?  
 4 **A.** Correct. They wouldn't have  
 5 transmissibility in the sense of they wouldn't have  
 6 sufficient permeability.  
 7 **Q.** So now in the BK Fischer application,  
 8 similarly in the Archie Erickson 2 well, the  
 9 investigation also found fractures, including one  
 10 minor fault. I would have the same questions for  
 11 that one. I'll let you get to the -- the figure  
 12 here. So Figure 2-30 (c) specifically would show  
 13 some of the fractures and the minor fault that was  
 14 found within the Opeche/Spearfish interval.  
 15 **A.** For this well the fractures were also  
 16 commonly filled either with anhydrite or clay. In  
 17 the case of the minor fault, it -- it appears to be  
 18 isolated. It doesn't appear to transect a  
 19 sufficient vertical extent to -- to serve as a  
 20 fluid migration pathway or to be transmissible.  
 21 Meaning it's a minor fault and it doesn't cut  
 22 through the entirety of the upper confining zone.  
 23 **Q.** And similarly in the last application, in  
 24 the Slash Lazy H 5 well there were fractures found  
 25 and a minor fault in the Amsden Formation.

363

1 **A.** Again, the minor fault -- or the fractures  
 2 are commonly filled, in this case commonly with  
 3 anhydrite. Similarly, given the geometry of this  
 4 minor fault, it appears to be isolated and does not  
 5 have properties to -- for it to serve as a fluid  
 6 migration pathway.  
 7 **Q.** So I want to go back to the BK Fischer  
 8 application. In the 3D seismic survey that was  
 9 done across these three storage facilities, was the  
 10 Stanton fault that was suspected to run through the  
 11 northwest corner of the BK Fischer storage facility  
 12 area found in the 3D seismic?  
 13 **A.** No. The proposed location of the Stanton  
 14 fault is on the edge of the 3D seismic survey. We  
 15 saw no indication of the fault or any deformation  
 16 associated with the fault.  
 17 **Q.** So now I'm going to move to questions  
 18 related to Section 3 for the model and simulation.  
 19 Do you know what the geographical projection was  
 20 used in Petrel for the geologic model?  
 21 **A.** I don't have that information on hand, but  
 22 perhaps I could provide it after a break.  
 23 **Q.** Okay. And what is the cell size in the  
 24 model both within and outside of the refinement  
 25 grid?

364

1 **A.** Outside the refinement grid, it's a  
 2 thousand by a thousand feet. Within the refinement  
 3 grid, I believe it's 250 feet by 250 feet.  
 4 **Q.** So on Figure 2-3 on page 2-5 that shows a  
 5 boundary for the simulation model, could you  
 6 explain why the boundary was centered as shown in  
 7 that figure within the geologic model?  
 8 **A.** Are you asking why the simulation model  
 9 extent was centered within the geologic model  
 10 extent?  
 11 **Q.** Yes. Or how it was determined as far as  
 12 placement for the centering with it?  
 13 **A.** So the -- the simulation model extent was  
 14 selected to cover Summit's sites and have enough of  
 15 a boundary -- or have enough cells as to model the  
 16 pressure plume and not have artifacts due to  
 17 boundary conditions. Additionally, we wanted to  
 18 incorporate the nearest site, the DCC West site, to  
 19 evaluate potential pressure interference.  
 20 **Q.** In the numerical simulation, are all three  
 21 facilities injecting across the same 20-year  
 22 injection period?  
 23 **A.** Yes. That's what was modeled.  
 24 **Q.** In this section it's stated that the TDS  
 25 value of the Broom Creek measured from the Milton

365

1 Flemmer 1 was used as the input for the numerical  
 2 simulation. Can you explain why the Milton Flemmer  
 3 1 sample was chosen out of the three?  
 4 **A.** Yes. So the Milton 1 sample was the --  
 5 the meeting of the three values. We selected that  
 6 as it was a site-specific value close to what could  
 7 be considered an average between the three.  
 8 **Q.** And could you explain what effect the TDS  
 9 input would have on the CO<sub>2</sub> plume?  
 10 **A.** Yeah. A higher TDS could potentially  
 11 result in a smaller plume.  
 12 **Q.** Similarly, it's stated that the  
 13 temperature and pressure gradients derived from the  
 14 Milton Flemmer 1 were used in the simulation.  
 15 Similarly the reasoning behind why the Milton  
 16 Flemmer 1 was chosen?  
 17 **A.** One of the reasons being wanting to apply  
 18 the same reservoir conditions associated with the  
 19 salinity value.  
 20 **Q.** And could you explain what effect  
 21 temperature has on the CO<sub>2</sub> plume? Movement, to  
 22 clarify.  
 23 **A.** A difference in temperature could result  
 24 in either a larger or smaller plume.  
 25 **Q.** So let's say like an increase in

366

1 temperature.  
 2 **A.** I can't recall at the moment. I could  
 3 provide that answer potentially after a break.  
 4 **Q.** You had noted earlier that the CO<sub>2</sub> stream  
 5 used in the geochemical modeling was done at  
 6 95 percent CO<sub>2</sub> and 2 percent oxygen to be more  
 7 conservative because oxygen is likely what's going  
 8 to be most reactive. Could you explain  
 9 additionally -- so in earlier testimony with group  
 10 one, they had stated that the minimum requirement  
 11 for the CO<sub>2</sub> purity would be 95 percent to be able to  
 12 take CO<sub>2</sub> from sources to send to these storage  
 13 facilities. Can you explain why in the numerical  
 14 simulation 98.25 percent was used instead of  
 15 95 percent? 95 percent being the minimum cutoff  
 16 for Summit to take CO<sub>2</sub> from third-party sources.  
 17 **A.** Just to clarify, that's what Wade  
 18 testified to, 95 not 98.  
 19 **Q.** Correct. But the model uses  
 20 98.25 percent. I'm just asking why 98.25 percent  
 21 was used in the numerical simulation.  
 22 **A.** Sure. So 98 percent is the expected  
 23 operational composition.  
 24 **Q.** And could you just explain what effect CO<sub>2</sub>  
 25 purity also has on the CO<sub>2</sub> plume movement? So like

367

1 a higher CO<sub>2</sub> purity would have what influence on CO<sub>2</sub>  
 2 plume movement?  
 3 **A.** In this case because of the compositions  
 4 where we're talking about, the potential would be  
 5 changes in plume size, but they -- it would be very  
 6 minimal.  
 7 **Q.** As proposed well injectors are drilled, so  
 8 for the three applications the six injectors  
 9 haven't been drilled yet. As they are drilled and  
 10 logging and coring and testing data is gathered,  
 11 that planned to be incorporated into the geologic  
 12 model and an updated simulation ran prior to  
 13 starting injection?  
 14 **A.** I don't know specific plans to update the  
 15 model, but I believe regulations require validation  
 16 of the proposed model inputs with the injection  
 17 well data, including the injection test that's  
 18 required for each injection well.  
 19 **Q.** So to confirm, if -- if the results  
 20 indicated a substantial change and the regulatory  
 21 group requested that it be done, at that time it  
 22 would likely be done?  
 23 **A.** By the regulatory group you mean the DMR?  
 24 **Q.** DMR.  
 25 **A.** Yes, we would.

368

1 **Q.** At what frequency will plume predictions  
 2 be updated once operations are underway?  
 3 **A.** No less than every five years.  
 4 **Q.** So I'd like to go to Figure 3-6 on  
 5 page 3-10 in the TB Leingang application.  
 6 **A.** I'm there.  
 7 **Q.** For all of the applications when showing  
 8 the permeability curves used for siltstone and  
 9 anhydrite, they were used equivalently. Could you  
 10 explain why you're using the same? So to clarify,  
 11 can you explain why the same permeability curve is  
 12 used for siltstone and anhydrite?  
 13 **A.** Sure. That's related in part to the core  
 14 analysis sampling and the data points available.  
 15 Because siltstone and anhydrite are expected to be  
 16 low permeability and porosity lithologies, we felt  
 17 it was sufficient to apply this data set to both  
 18 lithologies in the model.  
 19 **Q.** So I'd like to move to Table 3-5 on  
 20 page 3-35.  
 21 **A.** I'm there.  
 22 **Q.** So for all of the applications when having  
 23 this table shown for the EPA Method 1, you are  
 24 using the proposed locations of one of the  
 25 injection wells, being the TB Leingang 1, the BK

369

1 Fischer 1 and the KJ Hintz 1. Considering these  
2 wells haven't been drilled yet, can you explain how  
3 these values are derived?

4 **A.** Sure. So these values are taken from the  
5 geologic model and the simulation model.

6 **Q.** And can you explain why it was chosen to  
7 use these rather than the three stratigraphic test  
8 wells?

9 **A.** Given that we modeled to populate these,  
10 you'll note that, for example -- so I'd -- just  
11 trying to find a map I'd like to point you to. So  
12 I'd like to point you to page 3-22. So here is a  
13 map of the -- the average pressure change after  
14 20 years of injection. Again, the AOR was defined  
15 using pressure data from the simulations. If you  
16 look at -- here in this case the green triangle  
17 represents the injection well and just to the  
18 southwest of that, that gray triangle represents  
19 the Milton Flemmer well, and you can see that there  
20 is a large difference in pressure between those two  
21 locations. So in that sense it was more  
22 appropriate to use data from the injection well  
23 location to be able to evaluate pressure change.  
24 **MS. MADCHE:** That is all the questions I  
25 have. Thank you.

370

**EXAMINATION**

2 **BY MR. STOLL DORF:**

3 **Q.** Moving on to Section 4, I have some  
4 questions about locations. If you guys can't  
5 answer these, just let me know who can. Start on  
6 page 4-4, Figure 4-2. Just an AOR map showing  
7 occupied structures, among other things. How far  
8 exactly -- or approximately how far away from the  
9 facility are -- are occupied structures?

10 **MR. BENDER:** We have another witness who  
11 can provide that unless you know.

12 **MR. STOLL DORF:** Do you know who just so I  
13 know who to ask?

14 **MR. BENDER:** It will be Jimmy Powell.

15 **MR. STOLL DORF:** Jimmy.

16 **Q.** (MR. STOLL DORF CONTINUING) For the TB  
17 Leingang, BK Fischer and KJ Hintz wells, have any  
18 baseline samples been taken from these wells to  
19 date?

20 **A.** (BY MS. OLSEN) Not in this part of the  
21 Summit project.

22 **Q.** Okay.

23 **A.** Water -- Fox Hill -- you mean groundwater  
24 monitoring wells; correct?

25 **Q.** Correct.

371

1 **A.** Yep.

2 **Q.** This one is just related to the KJ Hintz  
3 facility area of review. The Raymond Jensen 1-34  
4 well, File No. 4942, is a plugged and abandoned  
5 well within that facility. Can you briefly explain  
6 the protective measures that are being made to  
7 monitor the CO<sub>2</sub> plume movement near that well?

8 **A.** 3D seismic surveys will be taken at least  
9 every five years as part of the testing and  
10 monitoring plan to track the plume. And at or  
11 around year 19, Summit proposes putting in an  
12 additional groundwater monitoring well in the Fox  
13 Hills Formation nearby that legacy wellbore.

14 **Q.** Do you know how -- approximately how  
15 close?

16 **A.** I don't think the final location has been  
17 determined yet.

18 **MR. STOLL DORF:** Okay. That's all I have.

**EXAMINATION**

20 **BY MR. SUGGS:**

21 **Q.** Okay. Bear with me. A lot of my  
22 questions have been asked at different levels, so  
23 I'm going to have to pan through this as I go.

24 But I'm also going to start with a couple  
25 of questions that were deferred. One being the --

372

1 looking at Figure 1-1 on 1-2 -- on page 1-2 of the  
2 Leingang application. Okay. I'll start with the  
3 odd shape of the CO<sub>2</sub> plume as it exists in the  
4 modeled stabilized CO<sub>2</sub> extent. Is there any  
5 explanation for why we don't see CO<sub>2</sub> in that central  
6 area, the southwest central area?

7 **A.** (BY MS. DOUGLAS) Yeah. In this region of  
8 the model, we had low porosity and permeability  
9 layers. That's why you don't see predicted  
10 migration of CO<sub>2</sub> plume there.

11 **Q.** The low PHIE and perm, I guess, layers  
12 that exist in that area, were they arbitrarily --  
13 and when I say "arbitrarily," just purely due to  
14 the variograms were they assessed or was there  
15 additional seismic evaluation that supported that  
16 low porosity/perm area?

17 **A.** There is additional seismic data that was  
18 used as control points and to -- to support the  
19 distribution of properties, but it should be noted  
20 that seismic data has resolution images for  
21 resolving thicknesses of different porosity and  
22 permeability layers, so there's potentially some  
23 uncertainty.

24 **Q.** Okay. So I guess in that explanation, did  
25 it just -- I'm going to tie this back to some of

373

1 the discussion on the depositional environment.  
 2 Would the seismic in that area indicate it was  
 3 partially interdunal or do you see the dune  
 4 structures there or not?  
 5 **A.** Correct. That would suggest the low  
 6 porosity and permeabilities typically associated  
 7 with those interdunal dolomites as well as  
 8 anhydrite deposits.  
 9 **Q.** Okay. And then I asked this as well  
 10 earlier, but in Township 141 North, Range 88 West,  
 11 Section 35, you'll note that on this exhibit, at  
 12 least, the stabilized CO<sub>2</sub> plume extent does appear  
 13 to contact the storage facility area border. Do  
 14 you know what the distance is between there? What  
 15 kind of buffer is applied at approximately around  
 16 that area?  
 17 **A.** Yes. So regarding the stabilized CO<sub>2</sub> plume  
 18 extent, it's a short distance, you know, on the  
 19 order of 10 feet, but I would like to point out the  
 20 red line is the CO<sub>2</sub> extent at the end of injection.  
 21 So we feel that that buffer is reasonable, and we  
 22 will, you know, reevaluate the predicted plume  
 23 movement and our storage facility area boundaries  
 24 no less than every five years to confirm that.  
 25 **Q.** So just to clarify, the red line is the

374

1 extent of the CO<sub>2</sub> migration at the end of the  
 2 20-year injection cycle?  
 3 **A.** Correct.  
 4 **Q.** And the gray that goes outside of that  
 5 would be where the model is predicting that CO<sub>2</sub> to  
 6 migrate during a ten-year postinjection phase?  
 7 **A.** Correct.  
 8 **Q.** Okay. Moving on to Sections 2 and 3, on  
 9 page 2-17 -- I've got to get there myself. The  
 10 narrative right above the figure indicates that the  
 11 net sandstone thickness in the simulation model  
 12 area ranges from 6 feet to 397 feet with an average  
 13 of 140 feet. Can you point me at -- somewhere on  
 14 the figure below, Figure 2-10a where it would  
 15 approach 6, or is that a typo in any way?  
 16 **A.** I believe the typo should say -- I believe  
 17 those values are from the geologic model extent,  
 18 not the simulation model extent, so that is an  
 19 error.  
 20 **Q.** Okay. So that wouldn't be -- so what  
 21 should that read, then?  
 22 **A.** Because it's sandstone thickness, I'd have  
 23 to calculate that from the model. I can't derive  
 24 that from the thickness map.  
 25 **Q.** I guess looking at the isopach of the

375

1 Broom Creek, then, do you see anywhere on that map  
 2 that you're presenting where the thickness would  
 3 approach 6 feet? I mean in glancing at it, I  
 4 thought the -- the thinnest that was represented  
 5 was on the order of a hundred feet.  
 6 **A.** Yes. That's why I believe that that's an  
 7 error. It should say those values are from the  
 8 geologic model extent where the Broom Creek  
 9 actually --  
 10 **Q.** Oh.  
 11 **A.** -- does pinch out, not the simulation  
 12 model.  
 13 **Q.** Got you. So not the simulation, but the  
 14 whole --  
 15 **A.** Correct.  
 16 **Q.** -- geologic?  
 17 **A.** So that -- I believe that sentence is in  
 18 error.  
 19 **Q.** And that'd be where it would punch out to  
 20 the northeast and the Broom Creek wouldn't exist --  
 21 **A.** Correct.  
 22 **Q.** -- far northeast of the whole model area?  
 23 **A.** Correct.  
 24 **Q.** Okay. Page 2-22. At the bottom of that  
 25 page you indicate that there's, I guess, a sample

376

1 bias towards the sandstones that were sampled.  
 2 Does that sample bias affect the overall model in  
 3 any way?  
 4 **A.** No. So the core samples were used to  
 5 calibrate petrophysical logs of porosity --  
 6 calculated porosity and permeability, and those  
 7 logs were what were used to help derive model  
 8 properties. So I -- I don't believe that that bias  
 9 impacted the model in a significant fashion.  
 10 **Q.** Figure 2-16 on page 2-25.  
 11 **A.** I'm there.  
 12 **Q.** At the very top of the Broom Creek here,  
 13 you have an anhydrite facies identified in column 7  
 14 on that figure. And then in column 8 when you  
 15 upscale those for the modeling purposes, it's being  
 16 applied the siltstone facies. Is there any effect  
 17 on the modeling due to that or is there a reason  
 18 that was applied instead of the anhydrite facies?  
 19 **A.** There is not an effect of that. Both the  
 20 anhydrite and siltstone are populated as low  
 21 porosity and permeability.  
 22 **Q.** So functionally they both act as confining  
 23 layers in the modeling?  
 24 **A.** That's correct.  
 25 **Q.** That drives me to the geochemical side of

377

1 this so I'm going to jump probably largely over  
 2 into Appendix C, but bear with me. The -- the  
 3 narrative -- so I'm looking at C-15 and 16 here --  
 4 or sorry -- Figures C-15 and 16. I think I'm on  
 5 C-12.  
 6 **A.** Figure C-15 and 16 or page --  
 7 **Q.** So the narrative that I'm asking about is  
 8 on page C-12 where you reference Figures C-9 and  
 9 10, which those figures are on pages C-15 and C-16.  
 10 **A.** Okay.  
 11 **Q.** This narrative indicates that dolomite is  
 12 the primary entity in dissolution and that  
 13 anhydrite is precipitating it. I just want to  
 14 confirm that.  
 15 **A.** That's correct.  
 16 **Q.** Okay. So in previous applications, the  
 17 anhydrite has been identified as a primary  
 18 dissolving element in those models, in those  
 19 geochemical analyses. So I guess my questions here  
 20 are what is different about the modeling that was  
 21 done here or the chemistry of the water or the  
 22 chemistry of the rock that is causing anhydrite to  
 23 be a precipitant instead of a dissolving --  
 24 **A.** I don't have that answer readily  
 25 available.

378

1 **Q.** Is that something that may be provideable  
 2 in short term or is that something I might need a  
 3 supplemental response on?  
 4 **A.** I could potentially provide it after a  
 5 break.  
 6 **Q.** Okay. I guess I'll -- I guess I'll ask  
 7 that if it's not something that can be answered in  
 8 testimony after a break, that it would be submitted  
 9 as explanation in supplemental.  
 10 **A.** Okay.  
 11 **Q.** Still on C-12 here -- bear with me. So  
 12 actually on page C-14, Figure C-8. In this figure,  
 13 the bottom figure, shows that mineral trapping is  
 14 still on the negative side of the equation so more  
 15 dissolution has taken place than precipitation at  
 16 this point through the extent of what's presented  
 17 on this figure; correct?  
 18 **A.** Yes. So what this figure is showing is  
 19 why there's negative amount for mineral trapping.  
 20 It's because of that dolomite being dissolved and  
 21 that those dissolved carbonates are being  
 22 attributed to as carbon that was added into the  
 23 system.  
 24 **Q.** Okay. In previous testimony you indicated  
 25 that it would be on the order of hundreds of years

379

1 before true mineralization started happening for CO<sub>2</sub>  
 2 in the storage reservoir. Have you projected that  
 3 out? Do you know a rough time frame when that  
 4 negative trend starts moving the other way?  
 5 **A.** We have not modeled that.  
 6 **Q.** Okay. C-18.  
 7 **A.** Maybe just one point very quickly. Sorry,  
 8 we're going back to Figure C-8. You can see by the  
 9 slope of the curve, after CO<sub>2</sub> injection ends, we  
 10 have less of that mineral trapping and that slows  
 11 down over time.  
 12 **Q.** But you still haven't taken it to the  
 13 point of when that actually reverses? It's just --  
 14 **A.** That's correct.  
 15 **Q.** -- expected or anticipated that it does  
 16 reverse?  
 17 **A.** Correct.  
 18 **Q.** Okay. Going on to page C-18, the -- the  
 19 narrative here for your PHREEQC model, and you've  
 20 testified to this earlier, that you used the  
 21 diffusion process for the mechanism by which the CO<sub>2</sub>  
 22 would enter. And, conversely, if you look at later  
 23 in the -- in the appendix when you're talking about  
 24 the lower confining zone and the simulation that  
 25 was done there, you're talking about advection and

380

1 dispersion. Can you elaborate a little bit on why  
 2 the two different mechanisms are used for the two  
 3 different confining zones?  
 4 **A.** Yes. So diffusion was used for the upper  
 5 confining zone as CO<sub>2</sub> is a buoyant fluid which is --  
 6 so CO<sub>2</sub> is a buoyant fluid which is why we needed to  
 7 use advection and dispersion which allowed the CO<sub>2</sub>  
 8 to dissolve in -- in -- in brine and the density to  
 9 allow it to enter the model cells for the lower  
 10 confining zone.  
 11 **Q.** So for the lower confining zone -- sorry,  
 12 I'm going to have to ask you to clarify that.  
 13 Focus on why diffusion was used for the upper  
 14 confining zone modeling.  
 15 **A.** I don't think I can elaborate and provide  
 16 that specific answer at this time, but I could  
 17 potentially provide it after a break.  
 18 **Q.** Okay. Probably the same situation, if I  
 19 don't get that answer as part of testimony, I might  
 20 want it as a supplemental.  
 21 **A.** Correct. We would be able to provide  
 22 that.  
 23 **Q.** Page C-18 still. The formation brine for  
 24 the simulation that was done on the Opeche and as  
 25 well as the -- or the Opeche/Spearfish as well as

381

1 what was done on the Amsden for the lower confining  
2 zone, in both cases you used the brine composition  
3 as it was determined from Broom Creek samples?  
4 **A.** That's correct.  
5 **Q.** Can you elaborate on why?  
6 **A.** Just let me confirm something real  
7 quickly.  
8 So it's my understanding given the  
9 porosity and permeability of at least the  
10 Opeche/Spearfish, we weren't able to collect a  
11 fluid sample due to the immobility of the water due  
12 to low permeability. Therefore, we used the Broom  
13 Creek as a representative sample as we don't  
14 believe the composition will vary greatly.  
15 **Q.** Okay. Still on page C-18, Table C-4 the  
16 average mineral composition of the Opeche/Spearfish  
17 that was used here, can you confirm which facies  
18 within the Spearfish that would represent -- or the  
19 Opeche/Spearfish?  
20 **A.** This sample -- the average sample here is  
21 approximately 60 percent mineral weight anhydrite,  
22 so I'd interpret that as anhydrite.  
23 **Q.** On page C-19, middle paragraph there when  
24 you're discussing Figure C-13, you indicate that  
25 the net change due to precipitation or dissolution,

382

1 in this case you're referencing C2, which is a cell  
2 within the model that was done, has less than 5  
3 kilograms per cubic meter net change. That net  
4 change, is that positive or negative?  
5 **A.** I'd have to clarify how that was  
6 calculated and provide that as a supplement.  
7 **Q.** I don't think I could confirm or  
8 guesstimate with the figure in front of me which  
9 way that would be going, so if we could confirm  
10 that as well.  
11 **A.** Yep. We could provide that as a  
12 supplement.  
13 **Q.** Page C-25, similar question. This happens  
14 to be the -- Table C-6 on page C-25 -- averaged  
15 mineral composition for the Amsden formation that's  
16 being presented in this table. Could you elaborate  
17 and confirm which facies that were represented in  
18 your modeling?  
19 **A.** I'd characterize that as a -- well, it  
20 would be represented as a dolostone in our model.  
21 **Q.** Okay. I guess a similar question on page  
22 C-28. The narrative at the -- in the bottom  
23 paragraph, again you're referencing an overall net  
24 porosity change as less than 2 percent. And can  
25 you tell me whether that's a positive change or a

383

1 negative?  
2 **A.** I would like to provide that as a  
3 supplement.  
4 **Q.** Okay. Then back up to Section 3,  
5 page 3-7, I believe. The bottom paragraph on page  
6 3-7 you discuss the distances from the edge of the  
7 model and the volume modifiers that were applied as  
8 boundary conditions. Can you spend just a few  
9 moments confirming what those distances are  
10 measured from and to within the model? And then --  
11 well, I'll let you do that first.  
12 **A.** So those distances are measured from the  
13 Broom Creek extent interpreted by the EERC which is  
14 shown on page 2-16 in Figure 2-9.  
15 **Q.** So the distance you're referencing there  
16 is the distance from the edge of the Broom Creek to  
17 the edge of the modeled area?  
18 **A.** To the edge of the simulation modeled --  
19 **Q.** The whole simulation.  
20 **A.** -- area. That is correct.  
21 **Q.** Okay. And then when applying your volume  
22 modifiers as boundary conditions, can you elaborate  
23 on what the effect of those are within the model?  
24 **A.** Yes. So we applied the volume modifiers  
25 to represent the fact that we don't have an

384

1 infinitely acting aquifer where the Broom Creek  
2 pinches out. Because we don't have an infinitely  
3 acting aquifer, there will be differences in how  
4 pressure responds in the reservoir due to that  
5 pinch-out. And so these modifiers were applied to  
6 take into account that difference in boundary  
7 condition between an infinitely acting aquifer and  
8 the closed boundary.  
9 And so the volume modifier is used in the  
10 CMG calculations with the boundary condition to  
11 account for the specific distance beyond the model  
12 where that pinch-out occurs, and so that is  
13 accounted for with the boundary conditions as it  
14 relates to the simulated pressure.  
15 **Q.** So the -- the cell -- the modifier being  
16 applied to a boundary cell allows -- allows that  
17 cell to act as if it has a larger volume than its  
18 individual cell size?  
19 **A.** That's correct. To allow the  
20 computational simulator to account for how that  
21 pressure would respond outside of the model.  
22 **Q.** So the smaller values have less distance  
23 or less volume in the reservoir in that  
24 direction --  
25 **A.** Correct.

385

1 Q. -- towards a pinch-out or towards a  
2 boundary of the -- the -- I guess the Broom Creek  
3 as a whole as opposed to what's actually simulated  
4 within the model?

5 A. That's correct.

6 Q. So this was asked a little bit, so I'm on  
7 page 3-8, the description your capillary pressure  
8 curves, and you indicate that they were derived  
9 from mercury capture -- mercury injection capillary  
10 pressure testing on the cores; right?

11 A. Correct.

12 Q. But then that they were modified. Can you  
13 elaborate on the need why they were -- why it was  
14 necessary to modify those core-derived values and  
15 what that process looked like?

16 A. So those values were calculated using data  
17 for -- from a single sample, so we looked at the  
18 porosity and permeability from that sample to  
19 upscale it to the ranges of the porosity and  
20 permeability reflected in our model.

21 Q. Okay. When you say that, was that -- when  
22 you say the single sample, you're referring to the  
23 single sample that was used to derive the two  
24 confining zones, being anhydrite facies values and  
25 siltstone facies values, or am I -- yeah, siltstone

386

1 and anhydrite.

2 A. We took capillary entry pressure data from  
3 a single sample from those units to derive these  
4 curves.

5 Q. Okay. And so, I guess, the modification  
6 of that mercury -- mercury-injection-derived data  
7 to be representative for CO<sub>2</sub> injection, what was  
8 done to, I guess, adjust the mercury fluid  
9 properties to the CO<sub>2</sub> fluid properties?

10 A. I could provide that answer after a break.

11 Q. Okay. Same, I guess, question or same  
12 response, then, if it's something that doesn't come  
13 as part of direct testimony, we'll want  
14 supplemental explanation for it.

15 Down in the AOR page 4-14, it was actually  
16 referenced in a number of locations, including on  
17 page 4-12 in Table 4-6, but there's a reference  
18 that's being used to the Tongue River Formation for  
19 a freshwater aquifer. I just -- I guess I'm just  
20 going to point out and confirm that Tongue River  
21 isn't a formation recognized on the North Dakota  
22 stratigraphic column at this time. There's an RI  
23 59 -- Report of Investigation 59 that was published  
24 in 1977 that proposed renaming the Tongue River and  
25 the Ludlow as they correlate from Montana and

387

1 Wyoming to the Slope and -- drawing a blank on the  
2 other one and I don't have it written here -- but  
3 rename those two formations. The Tongue River as  
4 you're referencing here would be equivalent to  
5 those two formations that are represented on the  
6 geologic strat column in North Dakota; correct? Or  
7 can we confirm that?

8 A. (BY MS. OLSEN) We can confirm that.

9 Q. Okay. On page 4-16, there's a line here  
10 in your narrative that reads, "The Pierre Formation  
11 is the thickest shale formation in the AOR and  
12 primary geologic barrier between the USDWs and the  
13 injection zone."

14 The primary barrier would be the upper  
15 confining zone; correct?

16 A. (BY MS. DOUGLAS) That's correct. So  
17 that's a misstatement.

18 Q. It would just be an additional barrier --

19 A. Correct.

20 Q. -- of significant thickness as what's  
21 indicated?

22 A. Yeah. We -- we consider it as a tertiary  
23 confining zone because there's the primary  
24 confining zone, a secondary confining zone, and  
25 then we consider the -- everything between the

388

1 Inyan Kara Formation and the Fox Hills as a  
2 tertiary confining zone.

3 Q. One last item I'm going to jump -- it kind  
4 of mixes between the AOR and the -- and Section 3.  
5 It's actually on 3-42 I think where the --  
6 page 3-42 where the narrative is. Right at the  
7 bottom of this page there's a statement,  
8 "Therefore, the AOR is delineated as the storage  
9 facility area plus a 1-mile buffer."

10 This immediately follows a discussion of  
11 the risk-based AOR approach that was taken, but the  
12 one-mile buffer that's applied for that AOR, is  
13 that -- is there any importance to the one mile  
14 that's being used or is that just a value that is  
15 chosen?

16 A. I can confirm during break, but to my  
17 understanding, that the AOR at a minimum has to be  
18 the storage facility area plus a one-mile buffer,  
19 but I will confirm that my understanding is correct  
20 during the break.

21 MR. SUGGS: Okay. That'll be all I've got  
22 on these sections.

23 HEARING EXAMINER GARNER: Okay. At this  
24 time why don't we take a break for lunch for an  
25 hour.

389

1 (Recessed at 12:29 p.m. and reconvened at  
2 1:30 p.m.)  
3 HEARING EXAMINER GARNER: Okay. We are  
4 back on the record.  
5 Attorney Bender, how would you like to  
6 proceed? Are we going to answer some questions  
7 that were pending?  
8 MR. BENDER: Yes. I don't know if I  
9 should say we'll recall -- we'll bring back Amanda  
10 Douglas who -- and there were some questions posed  
11 for her and she said she needed a little time  
12 during the break to research those answers. What  
13 we were proposing, perhaps to save some time, is  
14 she can read what she believes to be the question  
15 and then she can give the answer. And then there  
16 was a question or two also that Caitlin Olsen got  
17 that needed a little time to respond to. So I can  
18 just ask Amanda a few questions and proceed that  
19 way, if that's okay with you, Mr. Examiner.  
20 HEARING EXAMINER GARNER: Is that okay?  
21 That's fine.  
22 **REDIRECT EXAMINATION**  
23 **BY MR. BENDER:**  
24 Q. All right. Amanda, before we took the  
25 break, when you were answering some questions that

390

1 were posed to you by the Commission staff, I  
2 believe it was your testimony that if you had a  
3 little time during the break, you could take a look  
4 at some of your notes and some of the documents you  
5 have and respond to those questions; is that  
6 correct?  
7 A. (BY MS. DOUGLAS) That's correct.  
8 Q. Do you want to just walk through the  
9 questions as you understood them and then provide  
10 us with the responses?  
11 A. Yes.  
12 Q. Okay.  
13 A. With respect to the projection system  
14 used, it was NAD27 North Dakota State Plane South  
15 U.S. feet.  
16 The Commission had a question about  
17 generally how would having a higher reservoir  
18 temperature impact plume size. So it should be  
19 noted that temperature isn't the main driver in  
20 dictating plume size. There's other parameters  
21 that are more sensitive or the -- the -- the CO<sub>2</sub>  
22 plume size is more sensitive to other parameters.  
23 But generally a higher temperature could result in  
24 a bigger plume.  
25 I had a question on why we saw

391

1 precipitation of anhydrite and dissolution of  
2 dolomite and what constituents in the water  
3 chemistry or the mineralogy used for those models  
4 was different than previous permit submitted that  
5 would cause this. We would like to provide that  
6 answer as a supplement.  
7 I had questions about the transport  
8 mechanisms for the PHREEQC modeling. For the upper  
9 confining zone, diffusion is expected to be the  
10 dominant transport mechanism due to the buoyancy of  
11 the CO<sub>2</sub>. At the boundary between the reservoir and  
12 the confining zone, the reservoir will have a  
13 higher CO<sub>2</sub> concentration, so diffusion will allow  
14 the movement of gas from an area of high  
15 concentration to an area of low concentration.  
16 So with respect to advection and  
17 dispersion, these are the expected dominant  
18 transport mechanisms for the lower confining zone.  
19 So dispersion in the sense of the CO<sub>2</sub> mixing and  
20 forming saturated brine and that saturated brine  
21 mixing with unsaturated CO -- brine that's  
22 unsaturated with CO<sub>2</sub> and the different densities  
23 between the two and that mixing by dispersion, so  
24 between that and advection, those are the expected  
25 dominant transport mechanisms, and that's why those

392

1 were used for the lower confining zone.  
2 And there was a question on the use of  
3 MICP data and calculated relative permeability  
4 data, and we'd like to provide that as a  
5 supplement.  
6 Q. That's all you have? Those were the  
7 questions you received; is that correct? Those are  
8 the questions?  
9 A. Those are the questions I received. There  
10 is one more question that I received that Ms. Olsen  
11 will be providing the answer to.  
12 MR. BENDER: Mr. Examiner, unless there's  
13 other questions from the staff of Ms. Douglas, I  
14 would move to Ms. Olsen.  
15 HEARING EXAMINER GARNER: Okay. That's  
16 fine.  
17 Q. (MR. BENDER CONTINUING) Caitlin, can you  
18 recite for us what the question was that you're  
19 going to address for us now?  
20 A. (BY MS. OLSEN) Yeah. The first question,  
21 Rich, I believe you asked -- I don't remember the  
22 order in the questions, but you had asked about the  
23 nomenclature for some of those aquifers and namely  
24 the Tongue River. The new name that is more  
25 recently used is Bullion Creek, and so that is the

393

1 same formation. We're talking about the same thing  
 2 there, just to clarify.  
 3 And then the second question you had asked  
 4 about the AOR and the minimum one-mile buffer  
 5 outside of the storage facility area. That  
 6 language comes from 43-05-01-05 and it's -- that  
 7 language is outside throughout that rule, and it  
 8 references it -- the area several times. And just  
 9 to give an example, it will say something like the  
 10 evaluation must do X, Y, Z in the facility area and  
 11 within one mile of its outside boundaries.  
 12 So the AOR, when we talk about reviewing  
 13 wells and items inside of the AOR, is the storage  
 14 facility area and one-mile boundary pursuant to  
 15 43-05-01-05.  
 16 MR. BENDER: Okay. If there's no  
 17 questions from the staff, Mr. Examiner, we're ready  
 18 to move forward with our next witness as we talked.  
 19 Oh, I'm sorry.  
 20 MR. SUGGS: I did have a couple questions  
 21 that weren't addressed.  
 22 **FURTHER EXAMINATION**  
 23 **BY MR. SUGGS:**  
 24 Q. The net positive or net negative?  
 25 A. (BY MS. DOUGLAS) I had stated earlier

394

1 that we'd like to provide those, too, as  
 2 supplements.  
 3 Q. Okay. As a supplement still. Okay. And  
 4 then I apologize, but I did have one set of  
 5 questions that I forgot to hit and I have to find  
 6 it again in my notes. Page 2-66.  
 7 MR. BRAATEN: Of Exhibit 1A?  
 8 MR. SUGGS: Yes.  
 9 MR. BRAATEN: Thank you.  
 10 Q. (MR. SUGGS CONTINUING) And I guess the  
 11 narrative actually starts on page 2-65 regarding  
 12 your Mohr-Coulomb Critical Stress Analysis of  
 13 Faults. The faults that you have depicted in  
 14 Figure 2-42, can you identify what depths those  
 15 were identified at or what range of -- there's been  
 16 testimony that there's no faults in the injection  
 17 reservoir or the confining zones. So where are  
 18 these faults coming from? How were they  
 19 identified?  
 20 A. Yes. So the 3D seismic survey acquired  
 21 over the project area led to the identification of  
 22 several deep faults within the storage -- all three  
 23 storage facility areas. These faults originate  
 24 within the Precambrian basement and all of them  
 25 terminate below the top of the Interlake Formation,

395

1 which is approximately 3,000 feet below the Broom  
 2 Creek Formation.  
 3 Q. So they're all deep --  
 4 A. Correct.  
 5 Q. -- features?  
 6 Okay. And those are some of the items  
 7 that are identified or at least visibly  
 8 identifiable on Figure 2-41 on page 2-64?  
 9 A. That's correct.  
 10 MR. SUGGS: Okay. Thank you.  
 11 MR. BENDER: Okay. Mr. Examiner, if there  
 12 aren't any further questions, our plan now is to  
 13 call four new witnesses, and then we will recall  
 14 Caitlin Olsen to do the comparison between what  
 15 we've discussed in great detail, which is the  
 16 Leingang with the Fischer and the Hintz. And then  
 17 we're going to recall Wade Boeshans to talk about  
 18 the amendment that the Commission received a letter  
 19 on from Minnkota.  
 20 HEARING EXAMINER GARNER: Okay.  
 21 MR. BENDER: So our first witness will be  
 22 James Powell.  
 23 HEARING EXAMINER GARNER: Mr. Powell,  
 24 please raise your right hand.  
 25

396

1 **JAMES POWELL,**  
 2 being first duly sworn, was examined and testified  
 3 as follows:  
 4 **DIRECT EXAMINATION**  
 5 **BY MR. BENDER:**  
 6 Q. You go by Jimmy; is that correct?  
 7 A. Yes, sir.  
 8 Q. Will you state your full name for the  
 9 record?  
 10 A. James Earnest Powell.  
 11 Q. And, Jimmy, by whom are you employed?  
 12 A. Summit Carbon Solutions.  
 13 Q. And in what capacity?  
 14 A. Chief operating officer.  
 15 Q. What I'd like you to do is briefly  
 16 highlight for the examiner, Commission staff and  
 17 opposing counsel your educational background and  
 18 work experience.  
 19 A. Okay. I have a bachelor of science in  
 20 engineering, and I have about 35 years of  
 21 experience in the energy industry, predominantly  
 22 upstream/midstream, with the last 25 leading large  
 23 projects such as this, both internationally and in  
 24 the U.S.  
 25 Q. Okay. So I'm just going to have a

397

1 question or two for you having to do with  
 2 engineering and operational design. To what  
 3 standard will the flowlines be constructed?  
 4 **A.** The flowlines, like the remainder of the  
 5 pipeline system, will be constructed -- designed,  
 6 constructed and operated in accordance with DOT  
 7 regulations, CFR 49, 195.  
 8 **Q.** Okay. And can you explain how the three  
 9 entities that have made application for the storage  
 10 permits are going to work together and monitor this  
 11 system and utilize the data that's provided  
 12 throughout the SCADA system?  
 13 **A.** Yeah. So from receipt of the CO<sub>2</sub> molecules  
 14 at the capture facilities through transportation of  
 15 the pipeline system and through -- to the  
 16 sequestration system to the injection site and  
 17 subsurface, it will all be operated as one  
 18 integrated system under one supervisory control and  
 19 data acquisition system, and it will be controlled  
 20 from a single control center.  
 21 **MR. BENDER:** And, Mr. Examiner, after I  
 22 finish with a few questions of these other  
 23 witnesses, Mr. Powell will be available for  
 24 questions from the staff. So if I can move to the  
 25 next witness, I'll do so.

398

1 **HEARING EXAMINER GARNER:** Sure.  
 2 **MR. BENDER:** Next witness is John Hunt.  
 3 **HEARING EXAMINER GARNER:** Mr. Hunt.  
 4 Please raise your right hand.  
 5 **JOHN HUNT,**  
 6 being first duly sworn, was examined and testified  
 7 as follows:  
 8 **DIRECT EXAMINATION**  
 9 **BY MR. BENDER:**  
 10 **Q.** John, would you state your name for the  
 11 record, please?  
 12 **A.** (BY MR. HUNT) John Hunt.  
 13 **Q.** And, John, by whom are you employed?  
 14 **A.** By EERC.  
 15 **Q.** And in what capacity?  
 16 **A.** I'm a senior geoscientist and measurement  
 17 reporting verification, or MRV, specialist.  
 18 **Q.** And can you briefly provide for the  
 19 Commission staff your educational background and  
 20 work experience?  
 21 **A.** Sure. So I hold bachelor of science and  
 22 master of science degrees in geology. I'm a  
 23 licensed professional geologist. And prior to the  
 24 EERC, I worked at Chesapeake Energy as a petroleum  
 25 geologist.

399

1 **Q.** Okay. And you're going to talk just a  
 2 little bit about -- at least from questions from  
 3 me, about Section 5 of the application which is --  
 4 has to do with testing and monitoring; is that  
 5 correct?  
 6 **A.** That's correct.  
 7 **Q.** Okay. And my first question is can you  
 8 provide a brief summary of Table 5-2 in the  
 9 application?  
 10 **A.** Yes. So Table 5-2 begins on page 5-4 of  
 11 the TB Leingang application or Exhibit 1A. And let  
 12 me back up here just a little bit. So the testing  
 13 and monitoring plan, the full plan is laid out  
 14 between Tables 5-1, 5-2 and 6-1. So 5-1 being the  
 15 preinjection plan, 5-2 is the operational plan and  
 16 6-1 is the postinjection plan. We're hitting the  
 17 highlights of Table 5-2 simply because this makes  
 18 up the bulk of testing and monitoring and includes  
 19 all of the different various activities that Summit  
 20 will -- will perform.  
 21 And so let's -- yeah, again, let's go to  
 22 Table 5-2. This is an overview of the operational  
 23 testing and monitoring plan. And just to start us  
 24 off, a brief description of the -- of really what's  
 25 contained in this table. So if we're looking at

400

1 the columns and we're stepping left to right, we  
 2 see the first thing is the Monitoring Type. I'll  
 3 touch on that a little bit more in a minute, but  
 4 essentially, you know, whether it's a CO<sub>2</sub> stream or  
 5 surface facilities, the wellbores or the  
 6 environment, those generally make up the monitoring  
 7 types.  
 8 Then we step over and we have the  
 9 Parameter, so what parameters are we interested in  
 10 measuring. And then the next column describes the  
 11 activity that will collect those data. Then we  
 12 have the primary purpose of the activity listed,  
 13 the equipment and any tests associated with  
 14 gathering that data. The location where that data  
 15 will be gathered and a sampling frequency  
 16 described.  
 17 Finally, in the last three columns, we  
 18 have how that data -- what data will make its way  
 19 into the reporting to DMR. So we have the Report  
 20 Content, the Reporting Method and then the  
 21 Reporting Schedule specified.  
 22 So how I like to think about this plan  
 23 overall is you're really following the CO<sub>2</sub> stream as  
 24 it enters the sequestration facility, and you're  
 25 first and foremost analyzing the CO<sub>2</sub> stream in terms

401

1 of composition and end-to-end metering. So those  
 2 are some of the things highlighted in the rows  
 3 within the CO<sub>2</sub> Stream Analysis section. There's  
 4 also the Surface Facilities Leakage Detected --  
 5 Detection Plan as well as the Corrosion Prevention  
 6 and Detection Plan. Those generally at a high  
 7 level have already been touched on a little bit so  
 8 I won't go into great detail there.  
 9 And then we move to the wellbore sections.  
 10 Now the CO<sub>2</sub> stream has traveled through the surface  
 11 facilities and it's entered the wellbore, so here  
 12 we're primarily focused on activities that look at  
 13 monitoring wellbore integrity. So, for example,  
 14 pressure, temperature gauges, fiberoptic cable, all  
 15 of which provide continuous readings to monitor  
 16 the -- the operations of those wells, of the  
 17 injection wells.  
 18 And, finally, we have -- I guess  
 19 continuing on the wellbore monitoring part, we also  
 20 include a Downhole Corrosion Detection Plan, and  
 21 the key activity there is the pulse neutron log  
 22 which is also feeding into the wellbore mechanical  
 23 and integrity piece where we have periodic pulse  
 24 neutron logs planned to be acquired throughout the  
 25 life of the project.

402

1 And then, finally, the -- so now we've  
 2 injected the CO<sub>2</sub> into the storage reservoir and what  
 3 we're interested in is monitoring the volume in a  
 4 targeted way as that CO<sub>2</sub> expands within the storage  
 5 reservoir and ultimately that volume contained  
 6 within the area of review boundary. So we have a  
 7 Near Surface monitoring plan, which is primarily  
 8 made up of soil, gas and groundwater -- I guess  
 9 wholly made up of soil, gas and groundwater  
 10 sampling, and then an Above-Zone Monitoring  
 11 Interval, which is defined as the Opeche/Spearfish  
 12 to the Skull Creek. Again, pulse neutron logging  
 13 for logging saturations, and then the fiberoptic  
 14 cable to look at temperature.  
 15 And -- and then, finally, we end with the  
 16 monitoring of the storage reservoir itself which,  
 17 again, will be conducted with the fiberoptic cable  
 18 to monitor the temperature profile of the storage  
 19 reservoir as well as casing-conveyed pressure  
 20 temperature gauges on the injection wells and --  
 21 and also a downhole pressure temperature gauge  
 22 installed in the reservoir monitoring well. And  
 23 then we have planned 3D seismic surveys as has been  
 24 testified to a little bit prior to this point, as  
 25 well as a plan for monitoring seismicity with a

403

1 surface array of seismometers.  
 2 MR. BENDER: No further questions of this  
 3 witness. And the next witness will be -- yeah,  
 4 next witness is going to be Jay Volk.  
 5 HEARING EXAMINER GARNER: Jay Volk. Mr.  
 6 Volk, please raise your right hand.  
 7 **JAY VOLK,**  
 8 being first duly sworn, was examined and testified  
 9 as follows:  
 10 **DIRECT EXAMINATION**  
 11 **BY MR. BENDER:**  
 12 Q. Jay, can you state your full name for the  
 13 record, please?  
 14 A. (BY MR. VOLK) Yes. Thank you, Lawrence.  
 15 Jay Volk.  
 16 Q. And, Jay, by whom are you employed?  
 17 A. Summit Carbon Storage.  
 18 Q. In what capacity?  
 19 A. I am the sequestration director of health,  
 20 safety, environmental.  
 21 Q. Okay. And can you provide for us briefly  
 22 your educational background and work experience?  
 23 A. Yes. Lawrence, I have a bachelor's  
 24 degree, master's degree and PhD -- PhD from North  
 25 Dakota State University. My PhD is in the

404

1 department of natural resources with range  
 2 sciences. My work history has largely been through  
 3 BNI Coal. Spent approximately 17 years there  
 4 working on permitting, compliance, testing and  
 5 monitoring, financial assurance plans and site  
 6 closures. The last two years I've been employed  
 7 with Summit Carbon Solutions working within the  
 8 Class VI regulations.  
 9 Q. You're going to have to slow down a little  
 10 bit.  
 11 A. I apologize. Thank you for the reminder.  
 12 Q. And, Jay, you're here today to discuss  
 13 Section 7, which is emergency and remedial response  
 14 plans; is that correct?  
 15 A. That is correct.  
 16 Q. As well as financial assurance which  
 17 appears in Section 12; is that correct?  
 18 A. That is correct.  
 19 Q. Okay. So you'll be able to handle  
 20 questions from the Commission staff on those two  
 21 subject areas; is that correct?  
 22 A. That is correct.  
 23 Q. Okay. Let me just ask you a question or  
 24 two, first with respect to emergency and remedial  
 25 response. Can you tell us generally what is the

405

1 purpose of emergency and remedial response plans?

2 **A.** Yes. Lawrence, the purpose of the ERRP in

3 Section 7 is really to provide guidance for a

4 quick, safe and effective response plan to keep the

5 community and -- community, workers and the

6 environment safe. Items that we look at included

7 in there are definitions and reviews of local

8 resources --

9 **Q.** Slow down a little bit.

10 **A.** I am sorry for a second time.

11 Looking at areas such as what are the

12 local resources in the areas, identification of

13 potential events, as well as the response to the

14 events.

15 **Q.** And can you explain for us, slowly, the

16 interactions that you've had with local first

17 responders in Oliver, Mercer and Morton Counties?

18 **A.** Yes. Our interactions between the three

19 counties have really included a multilayered

20 approach to outreach. We've engaged all three

21 counties with LEPC meetings. We've worked within

22 dispersion methodology of meetings. We've worked

23 individually with LEC portfolio holders, as well as

24 with local responders on an individual basis

25 through safety tours or landowner meetings.

406

1 **Q.** Okay. Jay, let's shift gears a bit and

2 talk a little bit about Section 12, which is

3 Financial Assurance Demonstration Plan. Can you

4 provide for us a brief overview of the

5 methodologies used to determine the financial

6 assurance? And if you have to direct the

7 Commission's attention to any part of the

8 application, that'd be great.

9 **A.** Thank you, Lawrence. And I would direct

10 you to Table 12 -- or excuse me -- 12-1 on

11 page 12-2. The methodology that we used in

12 developing the financial assurance plan really

13 consisted of known cost, which included areas such

14 as plugging in injection wells, the PISC -- the

15 PISC plans, testing and monitoring, as well as site

16 closures and the flowline abandonment sections.

17 Other areas we looked at were estimated

18 costs, and that was used to determine the ERRP as

19 well as endangerment to USDWs. We also looked at

20 previous literature as well as previous Class VI

21 permits in developing the financial assurance plan.

22 **Q.** Okay. And can you provide for us an

23 overview of the cost estimates associated with the

24 financial assurances?

25 **A.** Yes. So, again, referring to Table 12-1,

407

1 for the TB Leingang, the plugging and injection

2 well cost was 1,166,000. Likewise, the PISC

3 storage and facility monitoring was 4,225,000, as

4 well as the flowline plugged and abandoned at

5 243,000.

6 And, I apologize, I'd have to ask -- the

7 PISC and storage facility is 4,225,000 if I

8 misspoke on that. The ERRP is 11,100,000. And the

9 endangerment of USDW is 2,695,000. And that gives

10 a total of 20,316,000 between the three -- or

11 excuse me -- between the TB Leingang.

12 I do want to make a quick reference before

13 I move on to the other two sites is what is covered

14 by the surety bond versus pollution liability

15 policies is also outlaid in Table 12-1 in which the

16 plugging of injection wells, PISC storage facility

17 and monitoring, flowline plugged and abandonment

18 cost, as well a site closure and remediation will

19 be covered under a surety. Whereas, an ERRP as

20 well as the endangerment of USDWs, a pollution

21 liability policy will be used.

22 Again, there is minor differences between

23 SCS2 and SCS3 in which the total bond for SCS2

24 proposed is \$20,868,800 as well as the KJ Hintz at

25 \$20,817,800.

408

1 Cumulatively, the three are bonded at just

2 over \$62 million.

3 **MR. BENDER:** Mr. Examiner, that's all the

4 questions I have for this witness. We do have

5 another witness that we'd like to call at this

6 time, Jean Oddy.

7 **HEARING EXAMINER GARNER:** Ms. Oddy, please

8 raise your right hand.

9 **JEAN ODDY,**

10 being first duly sworn, was examined and testified

11 as follows:

12 **DIRECT EXAMINATION**

13 **BY MR. BENDER:**

14 **Q.** Jean, would you state your full name for

15 the record, please?

16 **A.** (BY MS. ODDY) Jean Oddy.

17 **Q.** And by whom are you employed?

18 **A.** Summit Carbon Solutions.

19 **Q.** In what capacity?

20 **A.** Sequestration project engineer.

21 **Q.** And could you briefly highlight for the

22 Commission staff your educational background and

23 work experience?

24 **A.** Yes. I have a bachelor of science in

25 petroleum engineering from Montana Technological

409

1 University. Before Summit I worked for Neset,  
 2 which is an engineering and geological consulting  
 3 firm, in which most of my responsibilities was  
 4 around drilling engineering, design and operations,  
 5 as well as plugging and abandonment projects in the  
 6 Williston Basin, including wells such as Class II  
 7 saltwater disposal wells. And I joined Summit last  
 8 year in January.

9 Q. Okay. And you're here to discuss any  
 10 questions the Commission staff might have about  
 11 well design, casing, cementing, plugging and  
 12 completion; is that correct?

13 A. That's correct.

14 Q. Okay. A question or two having to do with  
 15 well design and casing. Can you -- excuse me.  
 16 With respect to Section 9, can you describe the  
 17 well construction plan design? And if you have to  
 18 refer to a particular figure or exhibit, please do  
 19 so.

20 A. Yes. I'd like to direct your attention to  
 21 Figure 9-1 on page 9-2. So in this well  
 22 construction program, starting with the surface  
 23 section, the surface hole will be drilled with  
 24 freshwater-based drilling fluid down to a depth  
 25 within the Pierre Formation. Surface casing will

410

1 then be set and placed at least 50 feet below the  
 2 base of the lowest underground source of drinking  
 3 water. Surface casing will then be set and  
 4 cemented in place from the surface casing shoe all  
 5 the way to the surface of the ground to provide  
 6 isolation to and from the underground source of  
 7 drinking water.

8 Moving on to the next section, we've got  
 9 the long string casing, so that section will be  
 10 drilled and cored at specific intervals. And then  
 11 in accordance to Class VI regulations and  
 12 administrative code, corrosion resistant alloy  
 13 casing will be set in place to a depth below the  
 14 Broom Creek Formation which is in the Amsden. The  
 15 long string casing will then be cemented in place  
 16 with CO<sub>2</sub> resistant cement from the shoe all the way  
 17 through the Mowry Formation, then cemented to  
 18 surface.

19 MR. BENDER: Mr. Examiner, that's all the  
 20 questions I have for this witness.

21 I would point out that at this point in  
 22 time, given the space that we have here for  
 23 witnesses to sit, I would like to give the  
 24 Commission an opportunity to ask these witnesses  
 25 questions, and then also point out that we do have

411

1 two other individuals who are in the audience. And  
 2 in the event these witnesses have some questions  
 3 that they feel can be better answered by someone  
 4 else, I would bring those people up. One is Jamey  
 5 Backus, B-a-k-k-e-s [sic], and the other is Luis --  
 6 how do I pronounce that?

7 MR. POWELL: Piasco.

8 MR. BENDER: Piasco, P-i-a-s-o [sic].

9 HEARING EXAMINER GARNER: Okay. Any  
 10 questions from the staff?

**EXAMINATION**

12 **BY MS. MADCHE:**

13 Q. I will go ahead and start. As before I'm  
 14 going to start with what I think are deferred  
 15 questions for this group. Early on Richard Suggs  
 16 had asked on whether or not you would be able to  
 17 provide industrial codes that best reflect the  
 18 capture sources, such as the ethanol facilities.  
 19 Is that something that you can provide at this  
 20 time?

21 A. (BY MR. VOLK) Yes. The ethanol NAICS is  
 22 325193 reflecting as asked for the capture NAICS  
 23 code, and that is for ethanol.

24 Q. Earlier an answer was provided for  
 25 approximately how many miles of the MCE pipeline

412

1 transmission pipeline system is within the North  
 2 Dakota PSC jurisdiction. 352 miles was provided,  
 3 but I believe, Jimmy, you would be able to confirm  
 4 that number?

5 A. (BY MR. POWELL) Yes. It's 3 --  
 6 approximately 332 miles are in the jurisdiction of  
 7 the Public Service Commission. In the delta  
 8 roughly 19 miles is within the NDIC jurisdiction.  
 9 So Wade had it accurate and correct. But the PSC  
 10 is 332.

11 Q. Okay. I had asked earlier on with the  
 12 first group yesterday on whether or not royalties  
 13 were being paid on the full CO<sub>2</sub> stream or just the  
 14 CO<sub>2</sub> mass of the stream. Is there anyone in this  
 15 group that can confirm that or is that something  
 16 that would need to be a supplemental?

17 MR. BENDER: No one can answer that.  
 18 We'll have to supply you with supplemental  
 19 information on that one.

20 MS. MADCHE: Okay.

21 Q. (MS. MADCHE CONTINUING) In Section 2  
 22 earlier I had asked what the maximum pressure was  
 23 applied during the microfracture testing in the  
 24 Milton Flemmer 1 that was done across the  
 25 Spearfish/Opeche Formation.

413

1     **A.** (BY MS. ODDY) Yes. I would like to  
 2 direct your attention to Figure 2-7 on the TB  
 3 Leingang 1 permit.  
 4     **Q.** I'm ready.  
 5     **A.** So relative to Milton Flemmer 1, the  
 6 maximum injection pressure is highlighted with the  
 7 black square box on the image on the upper section  
 8 there, and from that graph it looks like around  
 9 5580 psi was -- was pumped as a maximum. However,  
 10 after evaluation, there was no breakdown pressure  
 11 observed at that maximum pressure injected.  
 12         And then referring to Table 2-4, we do  
 13 have a summary on the Opeche/Spearfish  
 14 microfracture stress test breaking down your  
 15 breakdown pressure as well as your propagation  
 16 pressure.  
 17     **Q.** So some additional questions as it  
 18 pertains to the microfracture testing that was  
 19 done. A question that I had posed earlier was how  
 20 do you determine which sand package within the  
 21 Broom Creek to target for these tests?  
 22     **A.** So prior to the micro in situ stress  
 23 tests, we ran logs such as your magnetic resonance  
 24 log as well as an FMI log and sonic log, and in  
 25 combination of that along with the core photos that

414

1 we observed, along with some field description,  
 2 were able to pick the representative sand package  
 3 within the Broom Creek Formation and pick the test  
 4 steps.  
 5     **Q.** Could you elaborate a little bit more on  
 6 what makes a representative sample?  
 7     **A.** Yes. So I'm going to go back here to  
 8 another figure. Figure 2-5. We looked at the  
 9 sonic log, and on column 7 we've got the facies  
 10 there, so we looked at, you know, a good, thick  
 11 sandstone package. And then looking at the  
 12 magnetic resonance log, that showed us good  
 13 porosity in that test point. Then looking at  
 14 making sure there are no visible bedding or  
 15 fractures within the core photos that was -- that  
 16 was collected and any field description that was  
 17 noted by the geologists on site.  
 18     **Q.** So just to confirm, you're looking for a  
 19 sand package that would represent good porosity and  
 20 permeability but without fractures that could  
 21 possibly affect the results of the MBT test?  
 22     **A.** That's right.  
 23     **Q.** So as a follow-up to that, on average to  
 24 date across the Broom Creek on previous  
 25 applications, the frac grading has between 0.69 psi

415

1 per foot to 0.712 psi per foot. Could you explain  
 2 why we're seeing a larger variation across these  
 3 three facilities, specifically as it relates to the  
 4 Slash Lazy H 5 which was at 0.784 psi per foot  
 5 which would be above that range, or what you  
 6 anticipate might have caused it to be higher than  
 7 what we've seen to date on past applications?  
 8     **A.** So with that for the KJH -- or sorry --  
 9 the Slash Lazy H 5, cause of that could potentially  
 10 be activities during the drilling operation that  
 11 may impact. Also could be some bedding within the  
 12 FMI logs that was observed.  
 13         However, we are willing to, you know, work  
 14 with the DMR on solutions on confirming that --  
 15 that value at the KJH sites. It is also part of  
 16 our plan to perform an in situ stress test in the  
 17 KJH, at least on one of the wells. In addition, we  
 18 are planning on performing an injectivity test in  
 19 the injection wells again to confirm these values,  
 20 and that also applies in all six injection wells.  
 21     **Q.** Would you be able to explain what effect  
 22 the frac gradient has on the CO<sub>2</sub> plume size?  
 23     **MR. BENDER:** That's probably a question  
 24 that we'll have to recall Amanda to answer.  
 25     **MS. MADCHE:** Okay. And am I correct that

416

1 we'll want to do that at the end as far as  
 2 recalling?  
 3     **MR. BENDER:** Yeah. What I thought we'd do  
 4 is after we finish with this group, once again,  
 5 because of the size of the group, we're going --  
 6     **MS. MADCHE:** Sure.  
 7     **MR. BENDER:** -- to have to recall Wade  
 8 Boeshans and also Caitlin, and perhaps we could  
 9 bring Amanda up at the same time and get that done  
 10 if the examiner's okay with that.  
 11     **HEARING EXAMINER GARNER:** I am okay with  
 12 that. I was going to allow cross of these four  
 13 before they go to sit down and bring them back up  
 14 and sit down and bring them back up. Does that  
 15 work? Is that fine?  
 16     **MR. BENDER:** I mean, there's a lot of  
 17 people. I think it's a lot of cross. We can  
 18 finish our -- the remaining witnesses, I think,  
 19 very quickly. That's kind of what I had in mind  
 20 this morning, but it's certainly your call,  
 21 Mr. Examiner.  
 22     **HEARING EXAMINER GARNER:** Mr. Braaten, any  
 23 input? Are you okay waiting with the other  
 24 witnesses to be called and then we can -- then  
 25 you'll have an opportunity to cross any one of the

417

1 witnesses and recall them up here.

2 MR. BRAATEN: Yeah. I think with respect

3 to that, I just want to be clear on record that

4 specifically because what I'm running into now is

5 difficulty with scheduling with experts and when

6 they're going to be here, but thinking about what

7 Mr. Bender is saying whether I cross these folks

8 now or cross all of these folks right after, I

9 don't think that's going to help me on anything

10 else, so --

11 HEARING EXAMINER GARNER: Okay.

12 MR. BRAATEN: -- I'm okay with that --

13 HEARING EXAMINER GARNER: Okay.

14 MR. BRAATEN: -- but reserving my prior

15 objections --

16 HEARING EXAMINER GARNER: Sure.

17 MR. BRAATEN: -- on the scheduling.

18 HEARING EXAMINER GARNER: Your objection's

19 noted, so we'll go then with your witnesses.

20 MR. BENDER: Thank you.

21 Q. (MS. MADCHE CONTINUING) Okay. Just to

22 continue on the microfracture testing which you've

23 already given some testimony on, just confirming

24 that we would want to see a microfracture test done

25 on either the KJ Hintz 1 or 2 just to confirm that

418

1 value which was proposed in the testing and

2 monitoring plan.

3 Let's see here. So as it pertains to

4 the -- how the microfracture test data is used in

5 the simulation to calculate the bottomhole pressure

6 constraints that are used in the model, if the

7 results do come out substantially different on the

8 KJ Hintz 1 or 2, whichever you decide to do to

9 confirm that result, it is likely DMR would want

10 the model reran because of the bottomhole pressure

11 constraint being affected by that frac gradient.

12 A. Understood.

13 Q. Okay. I'm now moving into Section 5, so I

14 would like to go to Table 5-3. So on this table

15 you have the CO<sub>2</sub> stream composition specification

16 that must be met for you to, I believe, accept a

17 third-party source. My question related to this is

18 whether or not all the sources you currently have

19 contracts with have had samples taken or FEED

20 studies completed to confirm they meet or exceed

21 that stream composition?

22 A. (BY MR. POWELL) So the individual quality

23 spec for each course is greater than 95 percent --

24 Q. Okay.

25 A. -- carbon dioxide, and we did -- we had

419

1 done a stack test at each facility, and that will

2 be done -- the plants typically do them annually.

3 Unless we have a reason to do them intermittently,

4 we'll follow their schedule, but the individual

5 spec is not greater than 95 percent CO<sub>2</sub>.

6 Q. Yeah. I think the confusion was the

7 narrative right above Table 5-3 since it states,

8 "Any new CO<sub>2</sub> streams from third-party entities not

9 accounted for at the time of permitting must also

10 meet or exceed the specification once commingled."

11 And you're saying at a minimum at the

12 source side they would be greater than 95 percent

13 with the anticipation that the commingled stream

14 would be greater than 98.25 percent; correct?

15 A. Correct. And it's my recollection I think

16 all but one of the 57 sources were 98 percent or

17 higher. There was one facility that was about 96.

18 So commingled, yes, it would be greater than the

19 98 percent.

20 Q. And for any new sources that might come

21 down the line, I'm guessing additionally you would

22 want a stack test done before to confirm that

23 they're going to meet the specifications to take

24 that source?

25 A. You're correct.

420

1 Q. Could you -- yeah, we would require that

2 that data be submitted to us before we would

3 approve new sources too.

4 A. Okay.

5 Q. Could you elaborate on how the baseline

6 isotopic signature of the CO<sub>2</sub> stream will be

7 resampled if new sources are added later on?

8 MR. HUNT: So I think I can respond.

9 MR. POWELL: Okay. Go ahead because I was

10 just going to read a paragraph, but go ahead, John.

11 A. (BY MR. HUNT) Okay. So in the event that

12 a new source is added and approved by DMR, Summit

13 would sample that new commingled CO<sub>2</sub> stream within

14 one year after adding that additional CO<sub>2</sub> source to

15 get its composition and isotopic signature.

16 Q. (MS. MADCHE CONTINUING) Let's see. Will

17 the meters that exist -- or sorry. Let me rephrase

18 that.

19 Will meters exist at all the outlets at

20 the CO<sub>2</sub> source facilities, both in state and out of

21 state, to be able to account for how much CO<sub>2</sub> mass

22 and total injection stream volumes each individual

23 source is contributing?

24 A. (BY MR. POWELL) Yes. So Coriolis meters

25 will be installed consistently throughout the

421

1 system.

2 Q. And how do you plan to ratio those mass

3 and volumes back to the individual three storage

4 facility permits for reporting?

5 A. So I'm not the measurement expert, but it

6 would be reconciled. We'll have custody transfer

7 from the -- on the outlet or discharge side of the

8 capture facilities, and then we'll have -- we'll

9 have a measurement station at the terminus of the

10 main line. And then we'll have Coriolis meters or

11 measurement facilities at each of the injection

12 sites. And so it'll be a mass balance from volume

13 in from each of the 57 source plants all the way

14 through what's injected at each of the well sites

15 and that'll be reconciled.

16 Q. So I want to move us to Figure 5-3 on

17 page 5-12 of the TB Leingang application. So this

18 figure shows a generalized flow diagram. Could you

19 walk us through this figure specifically as it

20 relates to the capabilities to isolate individual

21 flowlines from each other and how pigging of the

22 flowline system will take place?

23 A. Yes, and I'd -- this is a difficult

24 diagram to do that from. If you start from right

25 to left -- so each line segment on the discharge

422

1 side of a capture facility will have a launcher.

2 And so -- and then each pipe diameter change within

3 the pipeline system will also have a launcher and

4 receiver. And then when you get to the

5 sequestration site, there will be a receiver at

6 each of the well sites.

7 So if you're looking right to left, so in

8 a common pipeline diameter size, you know, the

9 launcher will be the initiation of that pipe

10 segment, and then it'll go through right to left

11 and then you will be -- for instance, at the

12 sequestration site before it reaches the injection

13 facility, then it will go through a receiver, and

14 then downstream will be a meter or measurement

15 station which will include a gas chromatograph,

16 Coriolis meter and pump. And then the -- the --

17 the line of demarcation will be on the inlet valve

18 upstream of the shutdown valve at the injection

19 facility.

20 Q. So just to confirm, with the three -- with

21 the three individual flowlines, are you able to pig

22 those separately?

23 A. Yes. Each pipe diameter will be able to

24 be pigged independently. So in the sequestration

25 where we have 16, 20 and 24, each of those diameter

423

1 changes, the entire segment will be able to be

2 pigged independently.

3 Q. And as a follow-up, are there any plans

4 for an isolation valve at the junction of where the

5 BK Fischer flowline, called NDL-325, splits off

6 from the TB Leingang flowline known as NDL-327?

7 A. I may -- may need help from Jamey if

8 that's a diameter change.

9 MR. BENDER: Okay. We'll bring him up

10 later.

11 Q. (MS. MADCHE CONTINUING) Can you confirm

12 the land description of where that junction occurs

13 at those two flowlines? Looking at the prior

14 figure, Figure 5-2 it looks like it's Section 5,

15 Township 141 North, Range 87, but it's pretty small

16 scale on the map.

17 A. It looks correct to me as well, but it is

18 small scale.

19 MR. POWELL: And, again, perhaps Jamey can

20 confirm, Lawrence.

21 Q. (MS. MADCHE CONTINUING) So now I'd like

22 to go to Table 5-4 on page 5-14. In this table the

23 flowline has a maximum rate of 936 million standard

24 cubic feet per day, approximately equivalent to 18

25 million metric tons a year. Earlier on in the

424

1 project summary, the modeling had shown that this

2 facility, the TB Leingang specifically, would be

3 able to take 124.4 million metric tons over a

4 20-year period which would average around

5 6.22 million metric tons annually. Can you please

6 confirm there's no intent to send -- even though

7 the line has the capacity to send the full 18

8 million metric tons, there's no intent to send it

9 all to this one facility?

10 A. That is correct. There is no intent.

11 Q. And on average, what do you anticipate the

12 flow rate to be on this flowline?

13 MR. POWELL: Again, I'm going to have to

14 defer to Jamey for that, Lawrence. Sorry.

15 Q. (MS. MADCHE CONTINUING) Similarly, on the

16 BK Fischer application instead, and on its Table

17 5-4 on page 5-14, it has a maximum rate of

18 314.5 million standard cubic feet per day,

19 equivalent to around 6 million metric tons a year,

20 and its modeling had more of an annual amount of

21 4.92 million metric tons.

22 So, again, just confirming again that you

23 would not be exceeding what the modeling had showed

24 in those bottomhole pressure constraints even if

25 the flowline capacity would allow you to?

425

1     **A.** That's correct.

2     **Q.** And I'm interested in what the average

3 flow rates will be for all three flowlines for when

4 that gets deferred.

5           MR. BENDER: That's another Jamey

6 question?

7           MR. POWELL: Yes.

8     **Q.** (MS. MADCHE CONTINUING) So, additionally,

9 on that table, for all three of the applications a

10 typical operating pressure has a 900 psi range,

11 roughly, going from 1250 to 2150 psi. And this

12 might be a question that you need to defer again.

13 I'm wanting to know why such a big range was given

14 and whether or not you have -- kind of more within

15 that range where you actually typically plan to be

16 for all three facilities.

17     **A.** The range is just -- it's to keep the CO<sub>2</sub>

18 in super critical state, and so that's the range

19 from 1250 to 2150, and it's really applicable over

20 the -- predominantly over the pipeline system

21 because over the 2500 miles we have about --

22 including -- excluding the pumps at the discharge

23 site of the capture facilities, we have 17, I

24 believe -- if I recollect properly, 17 intermediate

25 pump stations, so you have that pressure gradient

426

1 from the discharge down to the suction side of

2 the -- of the next intermediate pump station, so

3 that's the range of pressures.

4           As it says, the maximum operating pressure

5 is 28 -- 2183, but the discharge set points will be

6 2160, and then we'd run the surge analysis and, of

7 course, you know that's 110 percent so that's,

8 according to the math off the top of my head, about

9 2400.

10     **Q.** So a couple follow-ups to that. In the

11 modeling, the model was done as being pressure

12 constrained both on bottomhole pressure and

13 wellhead pressure and not weight constrained. I'm

14 curious as to why you have a maximum discharge

15 pressure of 2160 psi when the wellhead pressure

16 constraint in the model was only 2100 psi.

17     **A.** Yeah, I might have to defer that one.

18           MR. BENDER: Jamey again.

19     **Q.** (MS. MADCHE CONTINUING) And just a

20 statement, because this isn't a weight-constrained

21 model, typically DMR would be going forward with

22 setting a wellhead pressure constraint based on the

23 model and not on operating conditions.

24           When it comes to kind of the fluctuation

25 that you had mentioned that you have on the

427

1 pressure to keep it in a super critical state, will

2 the metering that you're planning to use be able to

3 handle those fluctuations knowing that the density

4 of CO<sub>2</sub> is affected greatly by both temperature and

5 pressure and both the temperature and pressure on

6 this Table 5-4 is a fairly substantial range?

7     **A.** Yes, it is. It will. The Coriolis meters

8 can handle that variation.

9     **Q.** And are those mass flow meters or

10 volumetric meters?

11     **A.** Again, I'm not the measurement expert, but

12 I believe that they're mass flow meters.

13           MR. BENDER: Do you have the answer?

14           MR. HUNT: No.

15           MR. BENDER: Okay.

16     **Q.** (MS. MADCHE CONTINUING) So some questions

17 related to the corrosion prevention and monitoring

18 detection that's being implemented for all three

19 storage facilities. Can you elaborate a little bit

20 more on the ER -- the ER probes that are proposed

21 and the impressed current cathodic protection

22 system that's going to be used along the flowline

23 system?

24     **A.** (BY MR. HUNT) Yes. So for the ER probe,

25 DMR can think of those as -- you know, you guys are

428

1 familiar with a corrosion coupon. So imagine this

2 as a miniaturized corrosion coupon that is then

3 attached to a probe that's then attached to the --

4 to the flowline where it's subjugated to the -- the

5 stream continuously, and in real time there will be

6 continuous measurements of the electrical

7 resistance of that -- of that miniaturized coupon

8 or -- or that probe, said another way. Those --

9 those resistivity measurements are sensitive to

10 changes in mass and thickness in particular.

11     **Q.** What material is the composition of the ER

12 probes?

13     **A.** So they will be of the flowline material

14 as well as the wellbore material.

15     **Q.** So there will be two probes at at least

16 each injection site?

17     **A.** That is my understanding.

18     **Q.** And with the impressed current cathodic

19 protection system, is that combined as far as the

20 same system that's going to be across the flowline

21 and the transmission pipeline operated as a

22 continuous protection?

23     **A.** (BY MR. POWELL) It is.

24     **Q.** Referencing back to that Figure 5-2, I'm

25 just looking for confirmation on what the land

429

1 description would be for the terminus point.  
 2 Again, on this one it looks like it's Section 5,  
 3 Township 141 North, Range 86 West.  
 4 MR. BENDER: Is that something we can  
 5 supply you in a supplement?  
 6 MS. MADCHE: Yeah. Both of those  
 7 locations could be confirmed in a supplement. That  
 8 would be fine.  
 9 Q. (MS. MADCHE CONTINUING) So a question on  
 10 the seal pot system that is planned to be used to  
 11 maintain the tubing/casing annulus pressure to  
 12 approximately 300 psi. Are you anticipating any  
 13 on-site tank storage such as vessels needing to be  
 14 on site for that system that would be holding,  
 15 like, packer fluid or brine, not necessarily a  
 16 nitrogen vessel?  
 17 A. (BY MS. ODDY) At this time I don't  
 18 believe we plan on having storage tanks for  
 19 corrosion-inhibited fluid, but we will have the  
 20 nitrogen seal pot like you said adjacent to the  
 21 wellhead.  
 22 Q. I guess just a note. If at any point  
 23 those plans do change, secondary containment such  
 24 as a dike would be required around any brine  
 25 storage or the packer fluid.

430

1 And also a note that a Sundry variance  
 2 would be required to have the 300 psi annulus  
 3 pressure just because currently as rule requires,  
 4 it's to be greater than the injection pressure.  
 5 A. Understood.  
 6 Q. I believe this has already been answered  
 7 earlier in part, but just to confirm, no baseline  
 8 soil, gas sampling or groundwater sampling has  
 9 taken place yet; correct?  
 10 A. (BY MR. HUNT) That is correct.  
 11 Q. And that would be anticipated to begin  
 12 approximately a year in advance of injection  
 13 operations beginning?  
 14 A. That is also correct.  
 15 Q. So this question is specific to the KJ  
 16 Hintz and it may need to be deferred. I'm just  
 17 looking for how that year 19 was determined for the  
 18 year to install the Fox Hills monitoring well next  
 19 to the Raymond Jensen 1-34 P&A well.  
 20 A. Yeah. So in general the idea there was,  
 21 as has been testified to, you know, previously,  
 22 seismic surveys will be acquired at least every  
 23 five years, so, you know, year 2, year 4, year 9,  
 24 year 14, year 19. And so the idea there was that  
 25 as Summit is monitoring the CO<sub>2</sub> plume expanding in

431

1 the storage reservoir, we don't anticipate at this  
 2 time that that legacy wellbore will see CO<sub>2</sub> and  
 3 certainly within that time frame.  
 4 But, you know, taking a proactive approach  
 5 and after taking the seismic data and then  
 6 reviewing that data to see how is the CO<sub>2</sub> plume  
 7 progressing, is it conforming to expectations, so  
 8 that year 19 really just allows some of the  
 9 opportunity, the -- the optionality to wait to  
 10 install that well until, you know, it is needed.  
 11 And, of course, if it's determined that it may be  
 12 needed prior to then, then they have that option as  
 13 well.  
 14 Q. So I want to reference Section 5.7.2. Let  
 15 me get a page number. So that would be page 5-26  
 16 in the TB Leingang application. And it's paragraph  
 17 4, and this language is in all three applications.  
 18 There's a statement that Summit reserves the right  
 19 to evaluate and modify, if necessary, appropriate  
 20 groundwater sampling locations and frequency. Just  
 21 a note that any changes to the frequency or  
 22 locations should go through DMR for approval and  
 23 review.  
 24 A. Yes. Acknowledged.  
 25 Q. And that would apply as well as far as any

432

1 changes made to the near surface monitoring during  
 2 the PISC period.  
 3 A. Understood.  
 4 Q. Could you give a little more testimony on  
 5 the local passive seismicity array that's planned  
 6 to monitor for potential induced seismicity?  
 7 A. Sure. So at this time Summit has plans to  
 8 install multiple seismometers at the site. At this  
 9 time -- well, a specific layout or design or number  
 10 of stations is unknown, but prior to injection  
 11 Summit would request bids from vendors to put  
 12 together a site-specific strategy.  
 13 We understand today that by multiple -- in  
 14 order to properly triangulate and locate any  
 15 seismicity events, you would need at least three  
 16 seismometer stations as a minimum.  
 17 Q. Just a statement that once a layout's  
 18 known, that information should be provided to DMR.  
 19 A. Understood.  
 20 MS. MADCHE: Let's see. I think that's  
 21 all I have currently. Thank you.  
 22 **EXAMINATION**  
 23 **BY MR. STOLLDOFF:**  
 24 Q. Jimmy, I asked a question earlier that  
 25 they punted to you, so I'll ask it again. At its

433

1 closest, approximately how far away is the facility  
 2 for the TB Leingang from an occupied dwelling?  
 3 **A.** (BY MR. POWELL) I apologize because I  
 4 don't have each site memorized, but I believe the  
 5 closest dwelling to either -- any of the well sites  
 6 is about 4400 feet -- I'm sorry -- 2200 feet.  
 7 2200 feet. I believe the furthest is about  
 8 4100 feet. But it's 2200 feet. And we can clarify  
 9 if that's Leingang or if that's one of the other  
 10 two.  
 11 MS. MADCHE: I think we might just ask  
 12 that a supplemental is provided as far as the  
 13 proximity of how close the flowline is for each  
 14 individual one to the closest dwelling.  
 15 MR. POWELL: Okay. And I believe the  
 16 closest dwelling to a flowline at either location  
 17 is 700 feet, but we could provide the exact  
 18 distances for all three.  
 19 MS. MADCHE: Could you add to that also  
 20 closest distance to a wind turbine, specifically  
 21 for the TB Leingang application?  
 22 MR. POWELL: Yes, we can do that.  
 23 MS. MADCHE: Sorry to jump in.  
 24 **Q.** (MR. STOLL DORF CONTINUING) So Section 7,  
 25 the Emergency Remedial and Response Plan, that's

434

1 you, Jay; is that correct?  
 2 **A.** (BY MR. VOLK) Yes.  
 3 **Q.** Under the Section 7.6 -- I'll let  
 4 everybody get there. It indicates that the company  
 5 organizational structure is still in flux and in  
 6 development. Do you know -- I'd note that it's  
 7 expected that we -- to complete that before being  
 8 provided authorization to inject. We would expect  
 9 that to be nailed down.  
 10 **A.** Without a doubt. We're continuing to work  
 11 on, as the rest of the project continues to  
 12 develop, an integrated response plan as well which  
 13 will be consistent with this one, and we will  
 14 supply that when done and prior to injection.  
 15 **Q.** Okay. So this is in the PISC section.  
 16 Hopefully one of you can answer this. For all  
 17 three applications on Figure 6-2 -- give me a  
 18 second and I'll get a page number for you. That is  
 19 page 6-6 in Exhibit 1A for the TB Leingang  
 20 application.  
 21 Can you -- oh, sorry. Are you guys there?  
 22 Explain how the CO<sub>2</sub> extent ten-year  
 23 postinjection boundary was determined?  
 24 **A.** (BY MR. HUNT) I think we would want to  
 25 bring one of the other witnesses up to answer that.

435

1 MR. STOLL DORF: Probably Amanda?  
 2 MR. BENDER: (Nods head.)  
 3 **Q.** (MR. STOLL DORF CONTINUING) What's the  
 4 setback being proposed for the flowlines?  
 5 **A.** (BY MR. POWELL) Again, the setbacks for  
 6 the flowlines, similar to the -- to the pipeline in  
 7 North Dakota that's under PSC jurisdiction,  
 8 complies with State law, 500 feet as a minimum.  
 9 **Q.** What type of notification system's in  
 10 place should residents or -- and/or businesses need  
 11 to be notified in an emergency?  
 12 **A.** (BY MR. VOLK) We've had numerous  
 13 conversations with Oliver County, Mercer County and  
 14 Morton County, and this is an area we've determined  
 15 to work cumulatively on and develop. So right now  
 16 there's multiple systems being used between Mercer  
 17 County and Morton County. I believe Mercer County  
 18 and Oliver are both using reverse 911. Morton  
 19 County is using that as well as I believe some  
 20 secondary options.  
 21 So we have committed to continuing working  
 22 with all three counties to provide the data needed  
 23 to make sure the notification system is -- is going  
 24 to be consistent throughout all three counties.  
 25 **Q.** How often do you plan on doing training

436

1 with these local emergency response teams?  
 2 **A.** On an annual basis at minimum. I believe  
 3 it's not to exceed 15 months, but it is on the  
 4 annual basis.  
 5 MR. POWELL: Yeah. I'll just add that  
 6 since we know that North Dakota -- and I'm not sure  
 7 of a specific -- Jay, you could help me on Mercer  
 8 or Morton or Oliver, but a lot of the counties have  
 9 volunteer fire departments and sometimes those  
 10 personnel interchange or are unavailable, so we've  
 11 committed to providing training on a more frequent  
 12 basis as needed.  
 13 **Q.** (MR. STOLL DORF CONTINUING) I hope you  
 14 guys will -- someone here at the table will be able  
 15 to answer this one, but this has come up in the  
 16 past, but are there any special considerations for  
 17 DMR field inspection staff to be coming onto the  
 18 sites? Do you have -- or do you have any -- are  
 19 you aware of any issues that might bring up, having  
 20 a DMR inspector on site -- some of the sites?  
 21 **A.** (BY MR. VOLK) As expected, unrestricted  
 22 access for any regulatory items such as DMR access.  
 23 With that being said, previous work I've done has  
 24 always provided on-site hazard training for and up  
 25 to and including inspectors so they have the proper

437

1 notices of what is out there or what needs to be  
 2 out there. And if any special training would be  
 3 required for those inspectors, we will make sure  
 4 that's available.

5 Q. Would you be able to provide us --  
 6 MR. SUGGS: Sorry.  
 7 MR. STOLLDOERF: Oh, go ahead.  
 8 MR. SUGGS: On that note, if there is  
 9 anything anticipated, at this time I would ask that  
 10 it be provided as a supplemental for what you'd  
 11 anticipate the DMR inspection staff needing to have  
 12 under their belt or have training for accessing  
 13 your facilities.

14 MR. VOLK: We will provide that.  
 15 MR. SUGGS: Thank you.

16 Q. (MR. STOLLDOERF CONTINUING) As it relates  
 17 to Sections 9, 10 and 11, the construction plugging  
 18 and completion plans for the Class VI wells and  
 19 monitoring wells, we just want to note that it will  
 20 require typical DMR approvals prior to executing,  
 21 just so you understand.

22 A. (BY MS. ODDY) Understood.

23 Q. I want to move to Section 11, the  
 24 injection well. I have one question -- or a couple  
 25 questions. Can I -- okay. Then we'll go to 12.

438

1 Sorry. Excuse me.  
 2 You're approximating it'll cost about  
 3 \$583,000 to plug one injection well. Are you guys  
 4 considering that it's going to probably require a  
 5 big rig to handle that size of tubing?

6 A. That's correct. With a 7-inch tubing, we  
 7 will need a bigger workover rig. In addition to  
 8 that, the anticipation of the plugging plan is also  
 9 to set CO<sub>2</sub> resistant cement. So those estimated  
 10 costs are included in the plugging costs.

11 Q. Okay. And you touched on this earlier  
 12 about the surety bonds, but you're proposing to use  
 13 a surety bond for the injection well plugging phase  
 14 and the PISC phase. Are you planning to have one  
 15 surety bond or two separate bonds for each phase?

16 A. (BY MR. VOLK) At this point in time we  
 17 have not one -- allocated -- or we have not  
 18 committed to a certain provider, so that'll be  
 19 forthcoming, at minimum 30 to 60 days prior to  
 20 injection it would be submitted to you. We know we  
 21 will be using the surety and the pollution  
 22 liability for those, and I can't today tell you in  
 23 certainty if those will be split between the phases  
 24 you asked.

25 MS. MADCHE: I'm just going to jump in,

439

1 and not necessarily a recommendation but something  
 2 to consider is clearly as you work through closing  
 3 one of these facilities, plugging the injection  
 4 wells is going to be the first item. If they are  
 5 on separate sureties, that would allow you the  
 6 ability to request one to be released while  
 7 maintaining the other one for continued PISC  
 8 monitoring. So, again, just something to consider.

9 MR. VOLK: Appreciate that, and we will  
 10 provide additional information to you.

11 Q. (MR. STOLLDOERF CONTINUING) Can you  
 12 elaborate a little more on the emergency and  
 13 remedial response plan and how the endangerment to  
 14 USW -- or underground sources of drinking water  
 15 costs were determined?

16 A. I just want to make sure I'm getting to  
 17 the right figure. If you bear with me for one  
 18 second. There it is. So I'm going to direct your  
 19 reference to page 12-10 and Table 12-7. So, first  
 20 of all, I want to start off with what the actual  
 21 scenario was used to determine the estimated cost  
 22 on ERRP as well as to your specific question the  
 23 USDWs.

24 The scenario that was used was a well  
 25 failure or integrity issue with the well in which a

440

1 containment -- loss in containment event happened.  
 2 To get into more specific details on that, I will  
 3 have Jean talk through that. But to the specific  
 4 cost as it relates to the USDWs, it is broken out  
 5 between -- in Table 12-7, the general response  
 6 actions, delineation and water replacement at  
 7 1.89 million as well as the quarterly monitoring  
 8 which is dictated on a ten-year period for 750,000.  
 9 And then the plugging and abandonment cost of the  
 10 groundwater -- groundwater monitoring wells in that  
 11 area is another 55,000, which came up to  
 12 2.6 million.

13 Q. And you did mention that the failure  
 14 mechanism is a loss of a containment event?

15 A. That's correct.

16 Q. Okay. Just want to note that the  
 17 average -- okay. I don't need to. All right.  
 18 Never mind.

19 MS. MADCHE: No. I do have a follow-up on  
 20 that. Clearly, the costs are slightly different  
 21 for all three facilities for the emergency remedial  
 22 response. Can you just kind of go over what  
 23 parameters were used to determine those costs that  
 24 would cause that fluctuation?

25 MR. VOLK: Yes. The difference largely

441

1 comes into on the general response delineation and  
 2 water replacement line item. What we tried to do  
 3 is look at more site-specific characterizations in  
 4 those areas, how many wells, what would be their  
 5 water replacement cost, and that was the  
 6 distinguishing difference that drove the number up  
 7 or down.  
 8 MR. STOLLDOERF: Nothing further for me.  
 9 **EXAMINATION**  
 10 **BY MR. SUGGS:**  
 11 Q. Just a couple of additional items. I'm  
 12 going to jump back up to 5-13. The second-to-last  
 13 paragraph on that page related to custody transfer  
 14 of the CO<sub>2</sub>, the way that's described is that the CO<sub>2</sub>  
 15 when it reaches the terminus point will become the  
 16 custody of SCS1 and it will remain that way until  
 17 it goes down the hole at any of the three different  
 18 facilities. Am I understanding that intention  
 19 correctly?  
 20 A. (BY MR. POWELL) So that's page 5-15?  
 21 Q. Page 5-13, the second-to-last paragraph.  
 22 A. Oh, sorry. All right. That's my  
 23 understanding.  
 24 Q. Okay. As the flowlines are anticipated to  
 25 be owned by the individual storage facilities,

442

1 SCS1, 2 and 3, would Summit be opposed to a  
 2 requirement that would require a flow meter at  
 3 each -- I guess at the beginning of each of the  
 4 individual flowlines and an actual custody transfer  
 5 happening as it moves from one line into the other?  
 6 A. So versus having measurement at the  
 7 terminus of the main line for the -- sorry. As  
 8 opposed to just having the single meter at the  
 9 terminus of the main line at the -- at the  
 10 jurisdiction breakpoint and then an individual  
 11 meter at each well pad or well site, you're  
 12 suggesting or recommending that we'd have an  
 13 intermediate meter, then, at the beginning of each  
 14 of the laterals from that segment of main line,  
 15 flowline to each well site.  
 16 Q. (MR. SUGGS CONTINUING) Yeah. I think you  
 17 would end up with at least two additional meters in  
 18 play, one being where the CO<sub>2</sub> would go north to the  
 19 KJ Hintz facility and one at the point where it  
 20 goes west from the Leingang to the Fischer.  
 21 A. I'm not opposed to that.  
 22 Q. Okay. With respect to the cathodic  
 23 protection system that's being proposed, has that  
 24 already been designed at this point?  
 25 A. It hasn't been -- the impressed current

443

1 cathodic protection system?  
 2 Q. Yeah.  
 3 A. Generally. We're going to have to --  
 4 since we've added additional source points and  
 5 additional laterals along the whole system, we're  
 6 going to have to go back and rebalance the system  
 7 and figure out if the location of the ground  
 8 well -- the ground beds have changes, where they  
 9 need to be expanded, et cetera. So it needs to be  
 10 reconfigured upstream of the sequestration area.  
 11 Q. Okay.  
 12 A. As far as the sequestration area, it's  
 13 generally been designed but we'll refine.  
 14 Q. Okay. So that is still under works and  
 15 will be refined?  
 16 A. Correct.  
 17 Q. Okay. So when that is determined, we'll  
 18 want the location of the ano beds identified, and  
 19 pursuant -- there's -- on page 5-15 in Section  
 20 5.3.1, there's indication of -- what am I  
 21 reading -- Summit Carbon Solutions will supply DMR  
 22 with a map of cathodic protection boreholes to meet  
 23 the requirements of 43-05-01-5. Do you anticipate  
 24 actually drilling any cathodic protection boreholes  
 25 or will this system entirely utilize ano beds?

444

1 A. It's my understanding ano beds. We'll  
 2 clarify.  
 3 Q. Okay. And so, regardless, we'd want those  
 4 locations identified.  
 5 A. Yeah.  
 6 Q. And I think, John, you testified to this  
 7 earlier, but there's some narrative on 5-29 that  
 8 indicates that you will be running 3D seismic at  
 9 years two, four and nine. It is the intent to run  
 10 3D seismic as early as year two after injection?  
 11 A. (BY MR. HUNT) That's -- yes. Yeah, and  
 12 in the narrative it says "by year two," so just to  
 13 be clear.  
 14 Q. Okay. But my point -- my confirmation is  
 15 that there will be a sequence of 3D seismic run  
 16 shortly after beginning injection and another one  
 17 prior to the five-year review?  
 18 A. Correct.  
 19 Q. Okay. I'll point out that if anything  
 20 looks significantly off at that two-year mark, it  
 21 is expected that you will report that and we'll  
 22 begin the determination whether or not we need to  
 23 accelerate that hearing.  
 24 A. Understood.  
 25 Q. On page 5-32 there's the narrative about

445

1 the traffic light system for the passive

2 seismicity, and you have the cutoff points of 2.7,

3 4.0 and 4.5. Can you elaborate on what the

4 significance of those values as cutoff points are?

5 **A.** So 2.7 is the point at which humans can

6 begin to feel seismicity, and so that's why that

7 one is listed there. For events 4 and 4.5, I don't

8 have off by memory -- I would need to go and refer

9 back to the team on that one.

10 **Q.** Okay. If that's something that can't be

11 provided in short notice or short period as part of

12 this testimony, possibly a supplemental just

13 confirming what the importance of those values is

14 in that system.

15 **A.** Understood.

16 **Q.** And I think this one is for Jay. On 7-17,

17 the last sentence under the 5 -- sorry -- 7.5.1

18 section, it reads, "In addition, assistance has

19 been secured from local emergency services to

20 implement this ERRP."

21 Which emergency services have you

22 specifically worked with and secured their

23 assistance in execution?

24 **A.** (BY MR. VOLK) So we continue to develop

25 this. This is an overarching plan. We have

446

1 reached out to, as I've said, Morton County, Oliver

2 County as well as Mercer County, including the fire

3 departments in numerous of the surrounding towns.

4 A couple of them are Beulah, Hazen, Center, Zap.

5 So without having what I would call -- and I'm

6 going to say maybe that statement today is not

7 totally defined as the ERRP isn't, but continued

8 working agreements with -- or continued working

9 with them to commit to: One, I understand there's

10 a memorandum of understanding of mutual aid between

11 all of them or actually statewide now. So they

12 have recognized that. Two is they've recognized

13 that we will continue to work together in

14 developing that plan and know they have different

15 capabilities between the units. And that is what

16 we're going to continue to work on to supply what I

17 would call as an integrated plan between all three

18 counties.

19 **Q.** So in -- I guess with respect to this

20 statement in the application --

21 **A.** We have not secured an agreement, so I

22 would say that wording probably should be changed

23 at this point.

24 **Q.** Okay.

25 **A.** I would say commitment's a better word

447

1 than agreement.

2 **MR. SUGGS:** That's all I need. Thank you.

3 **HEARING EXAMINER GARNER:** Okay. Before we

4 recall those witnesses, why don't we take a

5 ten-minute break.

6 **MR. BENDER:** Okay.

7 (Recessed at 2:56 p.m. and reconvened at

8 3:12 p.m.)

9 **HEARING EXAMINER GARNER:** We are back on

10 the record. Attorney Bender, you wanted to recall

11 some witnesses.

12 **MR. BENDER:** Yes. We're going to recall

13 Caitlin Olsen.

14 **HEARING EXAMINER GARNER:** Microphone.

15 **MR. BENDER:** Oh, sorry. We're going to

16 recall Caitlin Olsen. We're going to recall Wade

17 Boeshans. And then to answer some of the questions

18 that came up from staff, we'll be recalling Amanda

19 Douglas, and then we'll have one new witness. As

20 you may recall, there were questions to the

21 previous group and they were deferred to Jamey

22 Backus.

23 And I apologize, I misspelled his name

24 earlier when there was a question on it. It's

25 B-a-c-k-u-s.

448

1 So with that in mind, we'll call Caitlin

2 Olsen back.

3 **HEARING EXAMINER GARNER:** Ms. Olsen, just

4 a reminder, you're still under oath.

5 **REDIRECT EXAMINATION**

6 **BY MR. BENDER:**

7 **Q.** Caitlin, I'm going to show you what's been

8 previously marked as Exhibit 8B. Can you tell me

9 what 8B is?

10 **A.** (BY MS. OLSEN) 8B is the Storage Facility

11 Permit Application Comparison Summary Table.

12 **Q.** And when we started the hearings, I

13 briefly explained to the --

14 **MR. SUGGS:** Lawrence, have you handed that

15 out yet?

16 **HEARING EXAMINER GARNER:** Do you have one?

17 **MR. SUGGS:** No.

18 **Q.** (MR. BENDER CONTINUING) When we started

19 the hearing, Caitlin, you may recall me talking

20 very briefly about the fact that we were going to

21 spend a lot of time on the Leingang application and

22 then we were going to sort of do -- contrast and

23 compare Leingang with Fischer and Hintz after that.

24 Do you recall that?

25 **A.** I do.

449

1 Q. Okay. And is 8B sort of a visual aid and  
 2 you being able to go through and make those  
 3 comparisons?  
 4 A. That's right.  
 5 Q. Okay. Let's start -- I'm not going to  
 6 interrupt you much, but why don't you start by  
 7 first talking about the various columns and what  
 8 your method was for laying this out and then you  
 9 can explain it to the Commission.  
 10 A. Sure. So the intent of this comparison  
 11 summary table was just to lay out the differences  
 12 between all three permits. Listening to the  
 13 hearings today, I feel like most of those points  
 14 have been covered by DMR or otherwise in testimony.  
 15 But you'll see here across the top the  
 16 column named SFP Permit Section, that relates to  
 17 the section of the permit that we're talking about.  
 18 Then you'll see Summit Carbon Storage #1, TB  
 19 Leingang/Milton Flemmer 1, that's referring to  
 20 permit number one, the TB Leingang permit.  
 21 Likewise, the second column is the BK Fischer  
 22 permit. And the third column is the KJ Hintz  
 23 permit.  
 24 Q. Okay. Then let's -- why don't we start  
 25 out first with the Project Summary, and what I'll

450

1 probably do is have you explain that in detail, and  
 2 then we can kind of walk through the -- the other  
 3 sections and you can probably more abbreviate your  
 4 discussion of it.  
 5 A. Sure. So as Wade testified to the project  
 6 summary earlier today, the only material difference  
 7 in the three permits in relation to the project  
 8 summary is the applicant name listed. All other  
 9 aspects of Wade's testimony apply to the TB  
 10 Leingang, the BK Fischer and the KJ Hintz as you'll  
 11 see noted in that row.  
 12 Q. Okay. Let's go to the next column -- or  
 13 not the next column, the next row.  
 14 A. Section 1, Pore Space Access. There's  
 15 minimal content changes between the permits, as  
 16 you'll see noted. There is one thing to specify in  
 17 the BK Fischer permit and that is that there is  
 18 Coyote Creek -- Coyote Creek mining -- mine land  
 19 located within the hearing notification area.  
 20 Q. And I think as a result of some questions  
 21 that came to Amanda, she pointed that out in one of  
 22 the exhibits; is that correct?  
 23 A. That's right.  
 24 Q. Let's go on then to Section 2.  
 25 A. That's the geologic exhibits portion of

451

1 the storage facility permit. You'll remember as  
 2 Amanda testified to yesterday and earlier today  
 3 that the model extents used across all three  
 4 permits are the same. Logging efforts are the  
 5 same. Microfracture in situ stress tests were  
 6 performed in all three wells and all three --  
 7 excuse me -- all three permits, and all three  
 8 permits used the same 2D and 3D seismic surveys.  
 9 The differences that we'll talk about here  
 10 mainly have to do with site-specific  
 11 characterization work. You'll note that in the TB  
 12 Leingang permit the Minnekahta Formation is present  
 13 as Amanda had testified to earlier. The Minnekahta  
 14 Formation is absent in the BK Fischer permit and in  
 15 the KJ Hintz permit.  
 16 Again, site-specific storage complex  
 17 formation data is -- varies between all three  
 18 permits as noted here. That includes core data,  
 19 log testing, things like that.  
 20 And the last point to make sure on Section  
 21 2, Geologic Exhibits, is that the number of  
 22 borehole image logs varies between all three  
 23 permits.  
 24 Q. All right. Then let's go to Section 3,  
 25 please.

452

1 A. Section 3 discusses the geologic model  
 2 construction and numerical simulation of CO<sub>2</sub> as  
 3 Amanda had testified to previously. The same data  
 4 inputs were used. Again, as described in Section  
 5 2, the same model was used across all three  
 6 permits. The same simulation was performed where  
 7 all three well sites were simulated as injecting at  
 8 the same time. You'll note here that there are  
 9 minor variations in Section 3 where site-specific  
 10 data is used to derive individual injection  
 11 pressures, rates, temperatures and critical  
 12 threshold pressure estimations. Those are the only  
 13 differences of material value.  
 14 Q. All right. Then we'll go -- the next row  
 15 is Section 4, the Area of Review. Can you briefly  
 16 discuss what's contained in that row?  
 17 A. Area of review, as I testified to earlier,  
 18 uses the same groundwater sampling method across  
 19 all three permits. The methodology remains the  
 20 same. There are site-specific differences that  
 21 have to do with the number of wells based on the  
 22 specific area of review and what wells exist there.  
 23 Other differences include other  
 24 site-specific surface features which may include  
 25 springs, mining land as I discussed previously, and

453

1 any legacy oil or gas wells. To note, there are no  
 2 legacy oil and gas present in the TB Leingang or BK  
 3 Fischer area of review. There is one KJ -- there  
 4 is one legacy oil and gas well in the KJ Hintz  
 5 permit as I had testified to earlier.  
 6 Q. I'm going to try to get some points here  
 7 with the court reporter, so can you slow down just  
 8 a little bit?  
 9 A. I thought I was.  
 10 Q. Let's go to the next section, Section 5.  
 11 A. Section 5 discusses the testing and  
 12 monitoring plan. Across all three permits, leak  
 13 detection plans are similar. Flowline corrosion,  
 14 prevention plans are similar, and baseline testing  
 15 and logging plans are similar. There are minimal  
 16 differences for mechanical integrity testing across  
 17 all three permits.  
 18 You'll note that in the TB Leingang permit  
 19 the Milton Flemmer 1 will use tubing-conveyed  
 20 gauges, as Jean had previously testified to in  
 21 Section 9. The other two stratigraphic  
 22 monitoring -- excuse me -- stratigraphic  
 23 test/monitoring wells will use casing-conveyed  
 24 gauges. Environmental monitoring plans, again, are  
 25 site specific but the methodology remains the same.

454

1 Q. Okay. The next section, please.  
 2 A. Section 6, the Postinjection Site Care and  
 3 Facility Closure Plan. The monitoring programs are  
 4 similar across all three storage facility permits.  
 5 There are minimal differences related to monitoring  
 6 well-specific details, for example, the maximum  
 7 pressures seen across each storage facility.  
 8 Q. All right. And then Section 7 I have  
 9 labeled on my exhibit Emergency and Remedial  
 10 Response Plan. Can you discuss that for us,  
 11 please?  
 12 A. The content between all three permits is  
 13 the same materially.  
 14 Q. Okay. And Section 8?  
 15 A. Again, the material content is the same  
 16 and there are no -- no large differences.  
 17 Q. And Section 9?  
 18 A. All three storage facility permits abide  
 19 by the same North Dakota rules and regulations,  
 20 such as requiring surface casing 50 foot below the  
 21 lowermost USDW and CO<sub>2</sub> resistant cement casing  
 22 within the injection reservoir zones.  
 23 You'll note that the biggest differences  
 24 are that the Milton Flemmer 1 stratigraphic test  
 25 well and monitoring well was drilled deeper. It

455

1 was drilled to 12,000 feet. The other two wells,  
 2 the Archie Erickson and the Slash Lazy H, were  
 3 drilled to approximately around 6,000 feet. That  
 4 would result in just differences in cementing.  
 5 Some are two stages for the shorter wells and some  
 6 are three stages in those completions.  
 7 Q. All right. Let's go to Section 10, the  
 8 plugging plan.  
 9 A. There are no material differences in the  
 10 plugging plans across all three permits. Plug  
 11 placement will vary based on formation depths, you  
 12 know, depending on where those formations exist  
 13 within each specific wellbore.  
 14 Q. And Section 11, Injection Well and Storage  
 15 Operations?  
 16 A. Again, the Milton Flemmer 1 well, since it  
 17 will be using tubing-conveyed pressure gauges,  
 18 tubing will be installed in the Milton Flemmer 1  
 19 well. Prior to injection operations beginning in  
 20 that storage facility permit in the TB Leingang,  
 21 that well will be plugged back. It's currently  
 22 drilled to about 12,000 feet.  
 23 There will be no tubing installed in  
 24 either the Archie Erickson monitoring well or the  
 25 Slash Lazy H monitoring well.

456

1 There are site-specific differences in  
 2 maximum bottomhole pressures, injection amounts, et  
 3 cetera, as seen in Table 11-1.  
 4 Q. Okay. And Jay spent some time comparing  
 5 and contrasting the financial assurance. So  
 6 keeping that in mind, can you just discuss Section  
 7 12 for us?  
 8 A. Yeah. Jay did a great job testifying to  
 9 the differences already. There are minimal  
 10 differences between all three storage facility  
 11 permits. The total bond amount between the three  
 12 storage facility permits varies slightly, and those  
 13 minimal differences are related to the cost  
 14 estimates of the postinjection site care and  
 15 facilities plan, and namely the number of  
 16 monitoring wells at each site, the reservoir  
 17 monitoring well design characteristics, flowline  
 18 lengths and costs associated with endangerment of  
 19 USDWs.  
 20 Q. All right. Now let's spend a little time  
 21 with the appendices that are attached to each one  
 22 of the applications. Let's start with Appendix A.  
 23 A. There are no material differences between  
 24 all three permits other than they use site-specific  
 25 information.

457

1 Q. And Appendix B?

2 A. There are, again, no material differences

3 in Appendix B, Freshwater Well Sampling Analysis,

4 other than the results are site specific.

5 Q. And Appendix C?

6 A. There are no material differences in

7 Appendix C across all three storage facility

8 permits. You'll note here that site-specific

9 information, namely XRD data, was used to inform

10 mineralogical compositions for injection zone and

11 confining zones. Again, stratigraphic

12 well-specific water ionic compositions were used

13 and, therefore, the simulation results are site

14 specific.

15 Q. And Appendix D?

16 A. There are no material differences between

17 the three storage facility permits. You'll note

18 that TB Leingang does list information for those

19 tubing-conveyed pressure temperature gauges.

20 Q. And then finally Appendix E?

21 A. There's no material differences. The

22 differences relate to the permits themselves.

23 MR. BENDER: Mr. Examiner, you know, I

24 don't -- I think I'll offer the exhibit, and I

25 don't have any other further -- I don't have any

458

1 further questions for Ms. Olsen.

2 HEARING EXAMINER GARNER: Any objections?

3 MR. BRAATEN: No objection.

4 HEARING EXAMINER GARNER: Exhibit is

5 admitted.

6 You can proceed to your next witness.

7 MR. BENDER: Next witness is Wade

8 Boeshans.

9 HEARING EXAMINER GARNER: And just a

10 reminder, Mr. Boeshans, you're still under oath.

11 MR. BOESHANS: Yes.

12 **REDIRECT EXAMINATION**

13 **BY MR. BENDER:**

14 Q. Wade, while we're handing out the

15 exhibits, I'm just going to have you direct your

16 attention to what's been previously marked as

17 Exhibit 1C-1.

18 MR. BENDER: Derrick, can you tell me when

19 you get a copy?

20 MR. BRAATEN: Sure. Okay. I'm ready.

21 MR. BENDER: Okay. Thank you.

22 Q. (MR. BENDER CONTINUING) Wade, can you

23 tell me what Exhibit 1C-1 is?

24 A. (BY MR. BOESHANS) It is the storage

25 agreement for SCS3 for the KJ Hintz storage site.

459

1 Q. And can you briefly describe the amendment

2 to the Hintz storage unit that Summit is proposing

3 with this exhibit?

4 A. Yes. So in this exhibit it includes an

5 amendment in what is labeled in here as Section

6 3.12.

7 Q. And can you explain to the Commission

8 staff why Summit is proposing the addition of

9 Section 3.12 to the Hintz storage agreement?

10 A. Yes. So as you're aware in the -- from

11 the previous -- or my testimony yesterday, the KJ

12 Hintz is in proximity to the DCC facilities. I

13 think I mentioned yesterday -- or I did mention

14 yesterday that approximately, you know, three miles

15 between the storage boundary of -- storage area

16 boundary of the KJ Hintz and the DCC West facility.

17 And so Summit and Minnkota have been in discussions

18 around a border agreement in terms of how we would

19 work together to, you know, manage our storage

20 operations or cooperate in storage operations. And

21 so this amendment outlines what we have agreed to

22 in terms of general terms, and those discussions

23 have advanced to this point.

24 Q. It's my understanding, Wade, that the --

25 the Hintz storage agreement already has language

460

1 for a border agreement -- for the parties to enter

2 into a boarding -- border -- I'm having trouble

3 talking here -- border agreement. Why was it

4 necessary to add Section 3.12?

5 A. Yeah. So you're correct in that the

6 application or the border -- the storage agreement

7 in the application includes border agreements.

8 This section is specific to a border agreement

9 between Summit SCS3 and the DCC facilities.

10 And so we thought it was prudent at this

11 time given our discussions to lay out the general

12 terms that we've agreed to at this point in

13 anticipation of finalizing that border agreement of

14 coming here, but this would set forth in essence

15 the -- call it general terms and expectations of

16 the border agreement which the parties have agreed

17 to work together on. We believe it's in our best

18 interest to do so, and so we're submitting it here

19 today.

20 Q. So it's Summit's request and Minnkota's

21 request that the storage agreement for the Hintz

22 storage facility be amended to include the language

23 which is set forth in 3.12; is that a fair

24 statement?

25 A. Yes. That's correct.

461

1 MR. BENDER: That's all the questions I  
2 have for this witness. Offer that exhibit which is  
3 Exhibit 1C-1.  
4 HEARING EXAMINER GARNER: Any objection?  
5 MR. BRAATEN: I don't have an objection to  
6 the admission of the exhibit. I have an objection  
7 to the amendment itself to the application at this  
8 point given the circumstances, but not to the  
9 admission of that exhibit into the record.  
10 HEARING EXAMINER GARNER: We will note  
11 your objection and admit the exhibit.  
12 MR. BENDER: Mr. Examiner, we'd now like  
13 to move to Amanda Douglas. If you recall, there  
14 were some questions when we had the larger group up  
15 here that we believe Amanda can respond to. So I  
16 believe she's still sworn.  
17 HEARING EXAMINER GARNER: Yeah. Just a  
18 reminder you're still under oath.  
19 MS. DOUGLAS: Understood.  
20 **REDIRECT EXAMINATION**  
21 **BY MR. BENDER:**  
22 Q. Do you want to handle it the way you did  
23 last time, Amanda, where you indicate what the  
24 question is and then respond?  
25 A. (BY MS. DOUGLAS) Yes. And DMR staff, if

462

1 I -- I miss any, please let me know.  
2 The first question I believe that was  
3 asked and deferred was how a fracture pressure  
4 gradient influenced CO<sub>2</sub> plume size. Generally, the  
5 fracture pressure gradient is used to calculate the  
6 bottomhole pressure constraint, so 90 percent of  
7 the fracture pressure gradient is used to define  
8 the bottomhole pressure constraint as required by  
9 regulations. A higher fracture pressure gradient  
10 would result in a higher bottomhole pressure  
11 allowing for more injection of CO<sub>2</sub> which would  
12 generally result in a larger plume.  
13 However, I'd like to point out in the  
14 modeling cases that we ran in the permits in  
15 Section 3, the 2100 psi wellhead pressure  
16 constraint was met prior to the bottomhole pressure  
17 constraint being met. So in this case the higher  
18 fracture pressure gradient at one of the sites is  
19 not dictating a larger plume size for the case --  
20 simulation case presented in the permit  
21 application.  
22 Q. That's -- I believe that's the only  
23 question that -- oh, there's another one?  
24 A. I was just pausing. Sorry.  
25 Q. Oh, okay.

463

1 A. Waiting for --  
2 Q. That was a long pause, so --  
3 A. Waiting for the Commission to -- to write  
4 their notes.  
5 Another question I believe -- Travis, you  
6 asked a question on stabilized plume. Could you  
7 please restate your question, or postinjection  
8 period?  
9 MR. STOLL DORF: Oh, okay. Hang on one  
10 second. Yeah. On Figure 6-2, can you explain the  
11 CO<sub>2</sub> extent ten-year postinjection -- how that  
12 ten-year postinjection boundary was determined?  
13 It's on page 6-6 or 6, dash, 6.  
14 MS. DOUGLAS: Yep. So the simulation  
15 model was used to simulate the 20 years of  
16 injection and several years postinjection. And so  
17 the plume as labeled here is showing the CO<sub>2</sub> plume  
18 extent at ten years postinjection as determined --  
19 as predicted by that modeling simulation.  
20 MR. STOLL DORF: Okay. What parameters are  
21 used to determine when the plume is stable -- when  
22 the plume is stabilized?  
23 MS. DOUGLAS: So plume stabilization is  
24 determined by looking at the rate of change in  
25 plume area over time. So the rate of change in the

464

1 plume area over time decreases, and so we used --  
2 we calculated the rate of change over one-year time  
3 steps and looked at the point in time where rate of  
4 change slowed down. And in that case the cutoff  
5 was determined to be less than two square miles of  
6 change per year in plume area, and that was used as  
7 our cutoff to determine when the CO<sub>2</sub> plume  
8 stabilized. .2 -- .2 miles, sorry, if I misstated.  
9 MS. MADCHE: And that's using the  
10 5 percent saturation cutoff as well within those  
11 square footage movements?  
12 MS. DOUGLAS: That's correct.  
13 MR. STOLL DORF: Thank you. That's all I  
14 had.  
15 MS. DOUGLAS: So, Tammy, you asked a  
16 question about the pressure from the flowlines and  
17 the wellhead pressure used in modeling. Could you  
18 restate that question?  
19 MS. MADCHE: Yes. So on Table 11-1 on  
20 page 11-2, for all three applications there's a  
21 note that maximum injection pressure during  
22 operations will be limited to surface equipment  
23 pressure ratings and the maximum bottomhole  
24 pressure constraint. In Table 11-1 and in Section  
25 3 in the model you report that you used a wellhead

465

1 pressure constraint of 2100 psi alongside the  
 2 bottomhole pressure constraints. However, in the  
 3 testing and monitoring section in Table 5-4, the  
 4 flowline maximum operating pressure is listed at  
 5 2183 psi along with a maximum discharge pressure of  
 6 2160 psi. So my question was why those operational  
 7 values on the flowline are higher than the wellhead  
 8 pressure constraint that was used in the model.  
 9 MS. DOUGLAS: So can you restate the  
 10 value? Did you say it was 2,160?  
 11 MS. MADCHE: 2183 for max operating  
 12 pressure, 2160 for max discharge pressure.  
 13 MR. BENDER: Do you want to hand that off  
 14 to Jamey or --  
 15 MS. DOUGLAS: Yes.  
 16 MR. BENDER: Reluctantly?  
 17 MS. DOUGLAS: So before Lawrence  
 18 introduces Jamey, then, you guys had a question on  
 19 the stoplight system and the magnitude of  
 20 earthquakes used in that stoplight system. So John  
 21 described 2.7 is the low value for that stoplight  
 22 system. Again, that's the threshold for a felt  
 23 earthquake.  
 24 Greater than a magnitude of 4 was chosen  
 25 essentially for that next step in the stoplight

466

1 system. At an earthquake magnitude level 4, that's  
 2 where the magnitude of the earthquake would be  
 3 sufficient to -- it's generally described by the  
 4 USGS as shake or rattle dishes. That's how the  
 5 USGS describes it. So at that point the stoplight  
 6 system states that SCS will stop injection, perform  
 7 inspection on surface facilities and wells to  
 8 ensure there's no damage, and then reduce  
 9 operations while a detailed analysis is done to  
 10 determine whether or not injection operations  
 11 caused that or that could have been a natural  
 12 earthquake that their monitoring array is just  
 13 picking up.  
 14 And then over 4.5 is the cutoff for  
 15 complete stop of operations and working with the  
 16 regulator to determine if any changes to injection  
 17 operations are needed.  
 18 MR. SUGGS: So why the 4.5? What's the  
 19 significance of that transition?  
 20 MS. DOUGLAS: So as you get from 4 moving  
 21 up till 5, so earthquake magnitude 5 -- as  
 22 described by the USGS, at earthquake magnitude 5,  
 23 that's where you might start seeing potential  
 24 damages to structure, such as cracked drywall,  
 25 things like that. And so 4.5 is below that 5

467

1 threshold to provide that safeguard to make sure  
 2 that operations are shut down before any  
 3 earthquakes are induced that could cause damage.  
 4 MR. SUGGS: Okay. Thank you.  
 5 MS. DOUGLAS: Were there any other  
 6 questions that you recalled that were deferred?  
 7 MS. MADCHE: No.  
 8 MS. DOUGLAS: Okay.  
 9 MR. BENDER: We'll now call Jamey Backus,  
 10 I think, who can respond to the remaining  
 11 questions. Jamey will -- and Jamey has not been  
 12 sworn.  
 13 HEARING EXAMINER GARNER: I'm going to  
 14 swear him in.  
 15 MR. BENDER: Okay.  
 16 **JAMEY BACKUS,**  
 17 being first duly sworn, was examined and testified  
 18 as follows:  
 19 **DIRECT EXAMINATION**  
 20 **BY MR. BENDER:**  
 21 Q. Jamey, state your full name for the  
 22 record.  
 23 A. Jamey Backus.  
 24 Q. And, Jamey, I misspelled your name  
 25 earlier, so will you spell your last name?

468

1 A. B-a-c-k-u-s.  
 2 Q. And, Jamey, by whom are you employed?  
 3 A. Summit Carbon Solutions.  
 4 Q. In what capacity?  
 5 A. Project manager of topside facilities.  
 6 Q. Okay. And can you spend just a few  
 7 moments providing us with a summary of your  
 8 educational background and work experience?  
 9 A. Bachelor's degree in mechanical  
 10 engineering. I worked at DGC for a number of  
 11 years, which is the chemical plant up near Beulah,  
 12 and then I also worked in coal-fired power  
 13 generation in roles such as engineer, maintenance  
 14 superintendent and plant manager.  
 15 Q. And what are some of your duties and  
 16 responsibilities with respect to your employment at  
 17 Summit?  
 18 A. That would be design of the topside  
 19 facilities and equipment selection.  
 20 Q. Okay. I don't have any other questions.  
 21 He's available for the questions that -- I don't  
 22 remember exactly what they were, but I think Tammy  
 23 may have had a few, or do you recall the questions?  
 24 A. Well, I think I can -- I'll go through all  
 25 the ones I have and then let me know if I forgot

469

1 any.

2 So if we begin with the max pressure one

3 that Amanda referenced, the max operating pressure

4 of the pipe is set by thickness, flange ratings, et

5 cetera. The maximum output pressure of the pump is

6 set by the pump manufacturer, but we will have

7 controls in place so that the wellhead pressure

8 never exceeds the 2100 psi.

9 MS. MADCHE: Sounds good.

10 MR. BACKUS: Okay. The other question,

11 the block valve where NDL-327 breaks off to

12 NDL-325, we did not have intentions of putting a

13 block valve there. Now, with the discussion of

14 potentially putting a Coriolis meter there, we may

15 revisit that, but we did not originally have

16 intentions of putting one there because the mileage

17 of the pipeline in that area did not require it.

18 MS. MADCHE: So I guess I would just state

19 we would probably highly recommend it just because

20 it gives you that extra ability to isolate between

21 the facilities since they are owned by separate

22 LLCs.

23 MR. BACKUS: You'd asked about location of

24 where NDL-327 goes to 325, that is 141 North, 87

25 West, Section 5. The terminus point is 141 North,

470

1 86 West, Section 5.

2 MS. MADCHE: Okay.

3 MR. BACKUS: Those were the ones that I

4 had.

**EXAMINATION**

6 **BY MS. MADCHE:**

7 Q. Okay. So additional ones I have were what

8 you anticipate the average flow rate to be for the

9 three individual flowlines?

10 A. Yeah. So I would -- I would reference the

11 Section 11 for each one of the applications, and

12 our average -- average injection rate between the

13 two wells utilizing the 2100 psi wellhead

14 constraint, I would -- I would utilize the total of

15 that number as to what will actually flow through

16 the line to the -- to the well site.

17 Q. So just to confirm, you plan to maximize

18 right up until the 2100 psi wellhead pressure

19 constraint?

20 A. Depending on flow coming in from the

21 capture facilities --

22 Q. Sure.

23 A. -- you know, the 16 -- I'll talk in rough

24 numbers -- the 16 million tons that is currently

25 slated.

471

1 MS. MADCHE: Okay. I'm just checking to

2 make sure I don't have anything else here. I think

3 that's all I have for deferred questions. I'll let

4 anyone else go. I do have one question on the

5 Exhibit 8B afterwards, so --

6 MR. BENDER: When you say "afterwards,"

7 I'm sorry, I don't mean to question you, but --

8 MS. MADCHE: Anyone else in DMR that --

9 MR. BENDER: Oh, I see.

10 MS. MADCHE: -- has --

11 MR. BENDER: Okay.

12 MS. MADCHE: -- deferred questions.

13 Sorry.

14 MR. BENDER: Okay. Thank you.

15 HEARING EXAMINER GARNER: I think you can

16 ask, Tammy.

17 Q. (MS. MADCHE CONTINUING) All right. So on

18 Exhibit 8B, on page 5 of 6 I think there might be a

19 typo on the KJ Hintz column under Section 12,

20 number 2. It states, "Additional groundwater

21 monitoring well and soil gas profile station has

22 been added at legacy well 4942." Based on the

23 figure in the application it's an additional Fox

24 Hills monitoring, not a soil gas station, just to

25 confirm. And that would be figure -- give me a

472

1 second.

2 A. (BY MS. OLSEN) You're correct. That's a

3 typo. There is not a soil gas station planned near

4 that additional legacy well. Just a Fox Hills

5 monitoring well.

6 MS. MADCHE: Okay. Thank you.

7 HEARING EXAMINER GARNER: Well, at this

8 time I guess we'll move to cross-examination unless

9 there's anything else.

10 MR. BENDER: Yeah. And I will -- I'll

11 accommodate Derrick in any way. If you would

12 prefer the -- that other group of people that we

13 had up a few moments ago and have -- and do your --

14 conduct your cross-examination on those witnesses

15 first or if you want to use this group, whatever

16 you prefer, I'll try to accommodate you.

17 MR. BRAATEN: Give me just one moment,

18 please. Maybe for efficiency, if you don't mind, I

19 can just start with some of the questions I had for

20 these witnesses and then finish that and recall any

21 that I need that were up prior.

22 MR. BENDER: I guess I'll try not to

23 object, but I would hope you would keep it to --

24 MR. BRAATEN: Yeah. I have questions

25 based on this testimony.

473

1 MR. BENDER: On the direct we just had?

2 MR. BRAATEN: Yeah.

3 MR. BENDER: Okay. Fine.

4 **RECROSS-EXAMINATION**

5 **BY MR. BRAATEN:**

6 Q. Ms. Douglas, I think you had testified

7 about the plume stabilization parameters and

8 indicated that the stabilization cutoff was

9 determined to be when less than .2 square miles of

10 change occurred in any given year at the 5 percent

11 saturation cutoff; do I have that right?

12 A. (BY MS. DOUGLAS) Correct.

13 Q. Did you also model -- let me start over.

14 Did you run the model to determine the

15 total duration over which the plume would keep

16 moving regardless of rate?

17 A. I can't recall off of the top of my head.

18 I know we modeled it for a significant

19 postinjection duration. I was not directly

20 involved in determination of stabilized plume so I

21 don't have that information readily available.

22 Q. Who made the determination for stabilized

23 plume or who was involved with that?

24 A. Apologies, I don't have those names

25 readily available.

474

1 Q. Was it people at EERC?

2 A. Yes.

3 Q. Okay. There was some discussion of the

4 stoplight system. Why not notify DMR of events

5 between a 4 and a 4.5?

6 A. That's not included here as written, but I

7 think that'd be prudent to add that.

8 Q. Okay. Ms. Olsen, you testified on

9 Exhibit 8B regarding the different depths for the

10 three wells. Do you have an understanding as to

11 why they drilled the three different wells to those

12 specific depths?

13 A. (BY MS. OLSEN) Generally, yes.

14 Q. And just generally, what is your

15 understanding?

16 A. My understanding is they were drilling the

17 Milton Flemmer to get core data from deeper

18 formations.

19 Q. Okay. Did they complete or are there

20 plans to complete that at a higher interval at some

21 point with a plug?

22 A. There are no plans, to my knowledge.

23 MR. BRAATEN: I have some questions,

24 Lawrence, related to surface facilities, and

25 Mr. Volk did some testifying but it sounds like

475

1 Mr. Backus has an understanding as well. Do you

2 mind if I ask him the questions, and if he can't

3 answer, we can call Jay Volk up?

4 MR. BENDER: I have no problem with that.

5 It may save time if you just try that approach.

6 Q. (MR. BRAATEN CONTINUING) Okay.

7 Mr. Backus, can I have you turn to the generalized

8 flow diagram on page 5-12 of Exhibit 1A?

9 A. (BY MR. BACKUS) Okay.

10 Q. Can you describe the purpose of the

11 blowdown which is indicated on the generalized flow

12 diagram?

13 A. Thank you. In hopes of not getting called

14 up, I didn't bring my glasses.

15 Oh, the blowdown on the receiver?

16 Q. Correct.

17 A. Yes. That would be for when the -- when a

18 pig is received in there and the receiver is

19 isolated, that blows down the pressure and CO<sub>2</sub> so

20 that the pig can be removed and data can be

21 retrieved from it.

22 Q. Are there emergency pressure relief valves

23 on the system anywhere as far as what we're looking

24 at in the generalized flow diagram?

25 A. There is a thermal relief valve, but not

476

1 emergency pressure relief valve.

2 Q. How do you deal with an unexpected spike

3 in pressures coming through this system?

4 A. I think that is dealt with through

5 controls of the pipeline pump pressure control

6 valves to maintain pressures that are -- that can

7 be withheld within the existing facility.

8 Q. Can you explain that a little more?

9 A. In order to have a pressure spike,

10 something would need to do that, and a pump would

11 be the obvious thing, and there are controls on the

12 pump, be it vari -- variable frequency drive or

13 just the nature of the pump that would keep it

14 underneath of the failure pressure of the piping --

15 or the maximum operating pressure, I should say.

16 I'm sorry.

17 Q. Do you believe there's a 0 percent chance

18 of pressure causing some kind of a release from the

19 surface facilities post Midwest Carbon Express'

20 terminus point?

21 A. I don't know that I can say there is a

22 0 percent chance of that ever happening.

23 Q. Have you done any kind of dispersion

24 modeling to determine the areas in which you would

25 need to provide notice to people if you did have a

477

1 release in one of those sites?

2 MR. BENDER: Before you answer that

3 question, I want to caution you that there's been

4 some -- there's been a dispersion model that's been

5 prepared and it's been submitted to the Public

6 Service Commission and it's confidential. So you

7 can answer the question, but be very careful that

8 you don't answer it in a way that provides

9 information with the model that was supplied to the

10 PSC.

11 MR. BACKUS: I can say that I was not

12 personally involved with any of the dispersion

13 modeling that has been done.

14 MR. BRAATEN: And fair objection,

15 Lawrence. I'm actually not trying to get into

16 that.

17 MR. BENDER: I appreciate that.

18 Q. (MR. BRAATEN CONTINUING) But my

19 understanding of the dispersion model with the PSC

20 is that that relates to the main line and to that,

21 and I'm asking just specifically if there was any

22 dispersion modeling done post main line on the

23 flowlines in those facilities?

24 A. I was not involved in any of that.

25 Q. Okay. And so you're not saying there

478

1 wasn't one done. You're just saying you don't

2 know?

3 A. Yes. That's what I'm saying.

4 Q. Okay. Is there -- do you know of anyone

5 else that's testifying that would know whether or

6 not one was done?

7 A. You could ask Mr. Powell.

8 Q. Okay. If Mr. Powell didn't know, is there

9 anyone else that would?

10 A. He would be the one to ask that question

11 to.

12 Q. Okay. What is the purpose of the thermal

13 relief valve?

14 A. So in cases where you can isolate a

15 section of pipe and it would be full of CO<sub>2</sub> at

16 pressure, if it heats up through whatever means,

17 say the sun is shining on that pipe, the CO<sub>2</sub> will

18 expand and this -- the thermal relief makes sure it

19 does not exceed safe operating limits.

20 Q. How does the thermal relief valve do that?

21 A. More than likely it would be the type of

22 thermal relief valve that is spring operated, so as

23 the pressure would increase, it would relieve that

24 and then close again.

25 Q. Is the valve opened based on temperature

479

1 or pressure?

2 A. The valve would open based on pressure.

3 Q. What pressure?

4 A. I believe that number is 5 percent over

5 maximum operating pressure.

6 Q. Wouldn't that risk a failure if the max

7 operating pressure is based on the manufacturer's

8 recommendations?

9 A. No, I don't believe it would. That --

10 that is a normal thing when you talk about, say, a

11 vessel. Normally they operate -- the pressure

12 safety valve in that case is normally set 10

13 percent over -- 5 to 10 percent over the operating

14 pressure.

15 Q. And when you say "the operating pressure,"

16 are you saying the max operating pressure as

17 established by the manufacturer of the pipe?

18 A. I'm saying the 900-pound class standard we

19 are working off of, that operating pressure, as set

20 by ASME, I believe.

21 Q. Okay. Does the valve, then, close by

22 itself automatically once it gets back down below

23 that pressure?

24 A. It does.

25 Q. Okay. So I asked you earlier about a

480

1 dispersion model, but are you aware of any testing

2 done on predicted maximum release from the line

3 through that valve?

4 A. Because -- because of that thermal relief

5 valve?

6 Q. Correct.

7 A. Yes, I am.

8 Q. And what -- what kind of studies were done

9 to determine what the maximum release would be from

10 that thermal relief valve?

11 A. It was -- a third party performed a study

12 based on a temperature rise in that line and the

13 thermal expansion of the CO<sub>2</sub> given the size of the

14 line and the volume contained in, how much it would

15 need to relieve.

16 Q. As well as the intended flow rate?

17 A. Yes.

18 Q. And operating pressure?

19 A. Yes. Well, it -- when you say flow rate,

20 do you mean through the valve or through the line?

21 Q. I don't know.

22 A. I can say this: If that would happen, it

23 is because everything is stopped. There is no flow

24 through the line and valves are closed.

25 Q. Okay. Yeah, so through the valve.

481

1 What was the maximum amount of CO<sub>2</sub>

2 predicted to be released from the thermal valve in

3 the scenario you described?

4 **A.** Approximately .136 tons per minute.

5 **Q.** And did they determine the maximum length

6 of time they thought such a release would

7 potentially occur under those parameters?

8 **A.** Based on the largest segment of line that

9 one of these exists on, I think there would be

10 approximately three tons of CO<sub>2</sub>. That would be if

11 you emptied the line completely, which would be

12 highly unlikely, but that would be if you emptied

13 the line completely.

14 **Q.** So when the thermal valve is released,

15 does that trigger other valves to stop flow in the

16 line or do you have to manually shut that off?

17 **A.** Well, as I said for -- for that to trip,

18 that means that there is no injection going into

19 that well. We have isolated the valves because it

20 is only as the temperature warms up, the pressure

21 would increase to release that. So there would be

22 no replacement CO<sub>2</sub> coming into that line. It's

23 simply to protect the line.

24 **Q.** Okay. Do you have an understanding of how

25 far three tons of CO<sub>2</sub> would disperse under natural

482

1 wind and weather conditions?

2 **A.** I do not.

3 **Q.** I'm not sure who this question is for, but

4 I think there was some testimony about who would be

5 operating the flowlines, so not the main line,

6 Midwest Carbon Express, but the flowlines. Was

7 there testimony that the flowlines would be owned

8 by the storage facilities but operated by SCS

9 Transport?

10 **A.** (BY MR. BOESHANS) That's correct.

11 **Q.** And when did that arrangement -- when was

12 that arrangement decided upon?

13 **A.** That -- I don't know that I can give you a

14 specific timeline in which that decision was made.

15 **Q.** Was it within --

16 **A.** I think it was generally that the intent

17 that -- from my recollection, it was always the

18 intent that it would be an integrated system

19 operated -- connected with a common control system

20 as Jamey described earlier.

21 **Q.** Are there any contracts signed between the

22 various entities to formalize that relationship for

23 operating the flowlines?

24 **A.** We do not have interoperating agreements

25 in place today between the entities.

483

1 **Q.** Or any other kinds of contracts to govern

2 that?

3 **A.** Not at this time.

4 **Q.** I apologize, I'm jumping around a little

5 now, but, Ms. Douglas, I think you had talked about

6 this traffic light system, and under the event of

7 greater than 4.01 one of the plans is to continue

8 operations at a reduced rate and/or below a revised

9 maximum operation pressure. How would you make

10 those determinations as to how much to reduce the

11 rate or the maximum operation pressure?

12 **A.** (BY MS. DOUGLAS) At this time what's

13 specified is injection rate would be reduced to no

14 less than 50 percent.

15 **Q.** How do you decide if it'll be 50 or 55 or

16 60, for example?

17 **A.** So as part of this stoplight system and as

18 this traffic light system is part of this seismic

19 monitoring, we'd be acquiring continuous seismic

20 data. So we'd take into account not just that

21 larger event but if there were other events, how

22 many, their magnitude, time duration, as well as

23 their epicenters.

24 **Q.** Mr. Backus, do you know what the diameter

25 is of the thermal valve?

484

1 **A.** (BY MR. BACKUS) 1 inch, I believe.

2 **Q.** Okay. Are there any other pressure relief

3 systems post terminus of the Midwest Carbon Express

4 that we haven't discussed?

5 **MR. BENDER:** I think I'd rather have you

6 address that question to Jimmy. He's more familiar

7 with those things, and he'll be coming up after

8 this.

9 **MR. BRAATEN:** Okay. Okay. I think that's

10 all the questions I have for these witnesses. I

11 have a few, I think, for Mr. Powell and Ms. --

12 one -- well, a couple quick ones for Ms. Oddy.

13 **MR. BENDER:** Do you want the whole group

14 or --

15 **MR. BRAATEN:** No, I think -- well, I think

16 we can start here. I think that they may be able

17 to answer them all.

18 **MR. BENDER:** Okay.

19 **CROSS-EXAMINATION**

20 **BY MR. BRAATEN:**

21 **Q.** Ms. Oddy -- am I saying that right, Oddy?

22 **A.** (BY MS. ODDY) Yes. Oddy.

23 **Q.** You made a reference to CO<sub>2</sub> resistant

24 cement. Can you describe what that is?

25 **A.** Yep. So as part of the design plan, we

485

1 have consulted with contractors who specialize on  
 2 cementing design in the basin, and part of that is  
 3 evaluating the downhole pressures and temperatures  
 4 as well as the interactions between the CO<sub>2</sub> stream  
 5 as well as the formation water in accordance to the  
 6 regulations. And so we're not looking at your  
 7 conventional oil and gas cement, primary cement.  
 8 The cementing system is tailored to provide  
 9 resistance to CO<sub>2</sub> with additions to different  
 10 chemicals and different formulations within the  
 11 cement.  
 12 Q. Other than the pH, are there other  
 13 properties of the cement that are specific to CO<sub>2</sub>  
 14 resistant cement that make it different than your  
 15 regular cement used for plugging wells in the oil  
 16 patch?  
 17 A. So -- yeah, so for both plugging as well  
 18 as primary cementing in our -- in our injection  
 19 wells and monitoring wells, some parameters I can  
 20 name off the top of my head is the permeability  
 21 would be significantly reduced in the formulation.  
 22 Those -- I can't recall any other parameters. Like  
 23 I said, we contracted specialized cementing  
 24 contractors.  
 25 Q. So just as a general matter, would the

486

1 lower permeability in that cement result from a  
 2 greater clay content?  
 3 A. So it would just mean that, generally  
 4 speaking, there'd be less chances on interactions  
 5 with, you know, potential oxidation or any chemical  
 6 reactions downhole.  
 7 Q. What do they add to the cement to prevent  
 8 oxidation or chemical reactions downhole that is  
 9 different than the cement used for normal cementing  
 10 or plugs in the oil patch?  
 11 A. I'm not privy to the specific additives by  
 12 the contractor.  
 13 Q. Do you know if anyone at Summit or EERC  
 14 is?  
 15 A. Again, we've contracted technical experts  
 16 from a cementing company and so they would know  
 17 the -- they, as in the contractor, have, you know,  
 18 a proprietary formulation of the cement system, and  
 19 then it would just be our responsibility to make  
 20 sure that those are rated for the bottomhole  
 21 pressures that we expect.  
 22 Q. What is the name of the contractor?  
 23 A. So the two commonly contracted out for  
 24 carbon portfolios would be either Schlumberger or  
 25 Halliburton.

487

1 Q. Okay. Is there any requirement to use CO<sub>2</sub>  
 2 resistant cement in these wells?  
 3 A. So under Administrative Code 43-05-1-11 --  
 4 this would be in my own summarization, but in the  
 5 selection of casing and cement, you know, where --  
 6 some of the factors that we need to take into place  
 7 in the design is bottomhole pressures,  
 8 temperatures, as well as the potential  
 9 corrosiveness when CO<sub>2</sub> is introduced with formation  
 10 water.  
 11 Q. And the cement both used to cement in a  
 12 casing as well as the plugs interacts with CO<sub>2</sub> in  
 13 the reservoir with these wells, the injectors?  
 14 A. With respect to the injection wells, yes,  
 15 it would be -- yep, because it'd be isolating the  
 16 injection zone. So it would -- the CO<sub>2</sub> would be  
 17 going through the casing into the cement into the  
 18 reservoir.  
 19 Q. Did they use CO<sub>2</sub> resistant cement to cement  
 20 in the casing or plug the Raymond Jensen well?  
 21 A. I don't have the details of what type of  
 22 grade of cement that was used in the Raymond Jensen  
 23 well.  
 24 Q. Why wouldn't that be as important as  
 25 knowing the cement in the injector wells?

488

1 A. We don't anticipate, as per Caitlin or  
 2 Amanda -- I can't remember which one, but we don't  
 3 anticipate the CO<sub>2</sub> plume at this time to reach the  
 4 Raymond Jensen well. However, it is part of the  
 5 area of review and therefore that was reviewed  
 6 as -- as Caitlin testified to.  
 7 Q. Okay. And the surface casing for the  
 8 Raymond Jensen well is not 50 feet below the lowest  
 9 USDW; right?  
 10 A. I'd have to -- I'd have to refer to that  
 11 diagram.  
 12 Q. Would you mind taking a look?  
 13 A. Oh, this is the TB Leingang.  
 14 Q. You know, I might be able to speed this  
 15 up. Are you confident that the depth of the casing  
 16 of the Raymond Jensen is in the application?  
 17 A. I do not know. I'd have to refer back to  
 18 the --  
 19 Q. Okay. I'll have you go ahead and look.  
 20 A. Can you repeat your question, please?  
 21 Q. Is the surface casing for the Raymond  
 22 Jensen well 50 feet -- at least 50 feet below the  
 23 lowest USDW?  
 24 A. According to the diagram here, I guess I'm  
 25 not sure in this area what would be considered what

489

1 the lowest underground source of drinking water is.

2 Q. What's the depth of the surface casing?

3 A. On the diagram it's 330 -- 330 feet.

4 Q. Okay.

5 MR. BENDER: Mr. Braaten, if you don't

6 mind, I think Caitlin can address that question, if

7 you want.

8 MR. BRAATEN: Oh, okay. Thank you.

9 MS. OLSEN: Can you repeat the question?

10 Sorry.

11 Q. (MR. BRAATEN CONTINUING) Is the surface

12 casing of the Raymond Jensen at least 50 feet below

13 the lowest USDW?

14 A. (BY MS. OLSEN) It's not.

15 Q. Okay. When you did the model for the

16 leaky well scenario, were you doing that based on

17 the location of the Raymond Jensen well?

18 A. No, we did that leaky well scenario to

19 delineate the AOR using the risk-based AOR method.

20 Q. Okay. I'm going to -- just a couple more

21 here, and I'm not sure who this one's for, but it

22 relates to the -- the valves in the surface

23 facilities we discussed. And, Mr. Powell, I think

24 these were for you.

25 But the first question is have you

490

1 designed that system to accommodate a situation

2 with a blocked flow in the system?

3 A. (BY MR. POWELL) Yes. So the general flow

4 diagram is not the piping and instrument diagram.

5 So the thermal relief was just to relieve pressure

6 in that bypass on that valve. So, yes, in all

7 segments where the -- a segment could be isolated

8 by a valve or shut in, yes, there is pressure

9 relief in those segments.

10 As far as design pressure, the pipe is

11 designed for 195. It's hydro tested to 125 percent

12 of that maximum operating pressure. The valves

13 were designed at Class 900 and bench-tested to 150

14 percent of pressure.

15 THE REPORTER: Can I have you speak up,

16 please?

17 MR. POWELL: Oh, sorry. I'll repeat it.

18 So as far as the design pressure of the

19 pipeline, it's per 195 regulation and then it's

20 hydro tested to 125 percent of the MAOP, which

21 would be 125 percent of the 2183. The valves are

22 designed to Class 900 and that pressure value and

23 then they're bench-tested at 150 percent of that.

24 Q. (MR. BRAATEN CONTINUING) Why was the

25 piping and instrumentation diagram not provided as

491

1 part of the application?

2 A. I can't answer that question.

3 Q. Can it be provided?

4 A. Yes.

5 Q. Rather than asking you to identify the

6 location and size of every valve in there, would

7 you be willing to simply provide the piping and

8 instrumentation diagram?

9 A. Yes.

10 Q. Oh, what is the diameter of those other

11 valves that you just discussed?

12 A. Again, we'll reference them on the piping

13 and instrument diagram. To Jamey's testimony,

14 they're typically 1-inch to 2-inch valves.

15 Q. But the diameter of those valves will be

16 listed on the piping and instrumentation?

17 A. Not the diameter of the valve. The size

18 of the valve. The valves themselves are standard,

19 at least in my experience, but the connections to

20 the piping, to the carrier pipe, that's typically

21 three-quarter inch to 1 inch, but we'll have that

22 on the P&I data.

23 Q. Okay.

24 A. And just to clarify, any relief of

25 pressure would not be external to the pipe. It

492

1 would be relieved into the pipeline. So if it's --

2 if you've got pressure relief between two

3 segments -- a segment of the pipe that could be

4 isolated with two closed valves, the pressure would

5 be iso -- or relieved downstream. It would not be

6 released to the atmosphere. So that wasn't clear

7 from what I heard before.

8 Q. Okay. Thank you. So the only valve that

9 would release to the atmosphere would be the

10 temperature valve --

11 A. No. The temperature.

12 Q. -- or thermal valve? Sorry.

13 A. The thermal relief should be -- should be

14 via tubing connected downstream. So if you have

15 those two -- if there's pressure built up in that

16 valve bypass, which would typically be closed in

17 normal operation, then you could -- to Mr. Backus'

18 testimony, you could have a thermal pressure

19 buildup, and if that's the case, there's a set

20 point on that valve, 110 percent, whatever it is --

21 we'll have that set point and that should be

22 indicated on the P&ID, at least at this point.

23 Then when it reaches that set point, it relieves

24 downstream of that closed valve so it relieves the

25 pressure on that piping, that segment of piping.

493

1 Q. The thermal valve releases the pressure  
2 downstream?

3 A. That thermal relief valve relieves the  
4 pressure from that small segment of bypass piping  
5 downstream of the closed valve.

6 Q. So it doesn't release anything to the  
7 atmosphere?

8 A. No. The only thing that would be released  
9 to the atmosphere is where you saw the blowdown  
10 referenced. That would be a controlled blowdown or  
11 release to the atmosphere if that were needed for  
12 normal or abnormal operating conditions.

13 Q. What kind of a spike in pressure would you  
14 expect if you had a valve shutdown at the wellhead?

15 A. Again, these -- these set points -- I'll  
16 back up.

17 I mentioned earlier in previous testimony  
18 about a surge analysis. So that surge analysis  
19 is -- was conducted on every -- or every main line  
20 valve, including in the flowline segments, was  
21 evaluated for an inadvertent closing. And the  
22 regulation is 110 percent of maximum operating  
23 pressure so it cannot exceed that. And in our case  
24 I believe the maximum was 107 percent. We can tell  
25 you exactly what the segments were in the

494

1 flowlines, I don't remember off the top of my head,  
2 but they were less than 110 percent.

3 Q. What was the time duration that was  
4 modeled over?

5 A. The -- the valves themselves are all  
6 actuated and have the capability to close in  
7 seconds, and we can confirm, but I believe the time  
8 frame was minutes, two to five minutes.

9 Q. So if all of your pressure relief systems  
10 relieves pressure within the line downstream and  
11 you have a valve unexpectedly shut at the wellhead,  
12 how do you relieve that pressure?

13 A. You're talking about upstream of the  
14 wellhead --

15 Q. Right.

16 A. -- to the inlet valve?

17 Q. Right. Yeah.

18 A. If it's the segment up -- well, let me  
19 back up.

20 Because there's -- remember, this is all  
21 automatically or automated or controlled by a  
22 control center, and there are -- there will be  
23 tight operating pressure boundaries. So they're  
24 continually seeing when any pressure changes may  
25 happen in a line, so -- and if -- there will be set

495

1 points, and I can't tell you what they are at this  
2 ten seconds, but there will be an alarm and then  
3 there will be a secondary alarm. And so the  
4 control center operator will have notification if  
5 there's a -- if there's a pressure increase, and so  
6 there will be procedures or protocol they take to  
7 relieve that pressure before there's a buildup that  
8 would overpressure any equipment, whether it's that  
9 inlet valve to the wellhead or that segment of  
10 piping. So there shouldn't be a situation even in  
11 an abnormal operating condition where that  
12 equipment will be overpressured.

13 Q. But the protocol you mention for ensuring  
14 that that doesn't get overpressured relies on human  
15 judgment?

16 A. No. There will be an automatic -- or you  
17 can't have automatic set points, but, yes, the  
18 first -- the first response would be from an  
19 individual in the control center. That's correct.  
20 Per procedures on what to do in a what-if  
21 situation.

22 Q. Will there be protocols provided to the  
23 DMR or any regulatory bodies with respect to the  
24 decision tree for the person making that decision?

25 A. Those will be in the standard operating

496

1 procedures. So I'm not -- I don't have the  
2 experience with the DMR to see if that's something  
3 that they are -- that they want to audit or  
4 interested in reviewing. If they do, they would be  
5 available. They're not confidential or will not be  
6 confidential.

7 Let me clarify. We're not going to  
8 publish them on the website, but if a regulatory  
9 body wants to see our operating procedures,  
10 absolutely.

11 Q. Mr. Powell, were you here during my  
12 questioning of, I believe, Ms. Douglas when I was  
13 asking about what Summit would do if after, for  
14 example, the five-year review you determined that  
15 you needed to change the boundaries of the storage  
16 facility and then my questions following that were  
17 about how you would allocate compensation in that  
18 event? Did you -- were you here during that  
19 testimony?

20 A. I was.

21 Q. So let's just take as a hypothetical a  
22 situation where Summit makes the determination  
23 after five years that the data on the ground  
24 justifies adjusting those storage facility  
25 boundaries. What is Summit's plan with respect to

497

1 how to adjust the compensation to the landowners  
 2 that has been paid up until that point?  
 3 **A.** I don't have that knowledge of how the --  
 4 how the compensation may or may not be adjusted to  
 5 landowners.  
 6 **Q.** Is there anyone else in the company that  
 7 would have that knowledge?  
 8 **A.** I'll defer to Mr. Boeshans.  
 9 **Q.** Okay.  
 10 **MR. BRAATEN:** I'm not trying to get out of  
 11 order, Lawrence, but do you mind -- this is like  
 12 right near the end. Do you mind if we have  
 13 Mr. Boeshans come up?  
 14 **MR. BENDER:** If you're getting close to  
 15 the end, I don't have any problem with that.  
 16 **Q.** (MR. BRAATEN CONTINUING) Mr. Boeshans, do  
 17 you have an under -- well, I'll just start over.  
 18 In the hypothetical scenario that five  
 19 years down the road Summit determines that it wants  
 20 to adjust the boundary of the storage facility  
 21 based on the data it gets from its monitoring  
 22 activities, how would it allocate or reallocate  
 23 payments already made to the owners in the storage  
 24 facility?  
 25 **A.** (BY MR. BOESHANS) So in that situation,

498

1 what I would see is, you know, it's an it-depends  
 2 answer. It depends on what the adjustment is to  
 3 the boundary. And then if we were going to make an  
 4 adjustment to the boundary, it would be -- you  
 5 know, be decided, you know, by hearing like this  
 6 with the Commission because that would be a major  
 7 modification to the permit.  
 8 And so at that time we would have more  
 9 information around what the change is, the  
 10 adjustment is, how much -- how long it's been  
 11 operated and have a -- probably have -- we'd have a  
 12 recommendation in terms of how to do that. We  
 13 don't have a plan exactly today in terms of how  
 14 that would happen.  
 15 **Q.** If you expand the storage facility after  
 16 five years, the boundary of the -- I'm going to  
 17 start over.  
 18 If Summit were to make a major  
 19 modification and expand the border of the storage  
 20 facility through a hearing with the DMR, would you  
 21 agree that you need to pay the new owners now being  
 22 included in the storage facility for prior  
 23 injections?  
 24 **MR. BENDER:** I'm going to object because I  
 25 think you're asking for a legal conclusion.

499

1 **MR. BRAATEN:** That's fair.  
 2 **Q.** (MR. BRAATEN CONTINUING) But what I'm  
 3 actually asking is what Summit's opinion would be  
 4 on that issue. Not whether they need to, just  
 5 whether you would.  
 6 **A.** So you're asking me if there was an  
 7 adjustment -- your situation, if there was an  
 8 adjustment after five years and we had been  
 9 injecting, would we pay the landowners that were  
 10 added to the unit?  
 11 **Q.** For the past injections.  
 12 **A.** For the past injections. I don't know  
 13 that I can answer that. It's a -- I think you'd  
 14 have to understand more about that situation, what  
 15 led to the changing of the units.  
 16 **Q.** What more do you want to understand? What  
 17 information are you missing to make the  
 18 determination?  
 19 **A.** Well, I'm missing the historical operation  
 20 and what led to the need for a change.  
 21 **Q.** Well, let's presume -- sorry. This was  
 22 implied, but I should be explicit. You're going to  
 23 change the size of the storage facility because  
 24 you've determined that it was inaccurate and that  
 25 the plume is going to move further than you

500

1 originally anticipated such that you need to expand  
 2 the boundary of the storage facility.  
 3 **MR. BENDER:** And I'm going to object.  
 4 You've asked that question previously in a little  
 5 bit different manner and he said he needs to know  
 6 more information before he can answer the  
 7 question -- answer the question. So I'm going to  
 8 object.  
 9 **HEARING EXAMINER GARNER:** I'm going to let  
 10 him answer if he knows.  
 11 **MR. BOESHANS:** I don't know.  
 12 **Q.** (MR. BRAATEN CONTINUING) You don't know  
 13 what?  
 14 **A.** I don't know the answer to your question  
 15 right now.  
 16 **Q.** So Summit won't make a commitment to pay  
 17 owners added into an expanded storage facility for  
 18 prior injections?  
 19 **MR. BENDER:** Objection. Asked and  
 20 answered.  
 21 **HEARING EXAMINER GARNER:** Sustained.  
 22 **Q.** (MR. BRAATEN CONTINUING) Was the answer  
 23 no?  
 24 **MR. BENDER:** He said he didn't know.  
 25 **Q.** (MR. BRAATEN CONTINUING) Okay. But if

501

1 you don't know whether or not Summit will make a  
2 commitment to do that, then the answer is that  
3 they're not making a commitment right now to do  
4 that; right?

5 MR. BENDER: Objection. I mean, we've  
6 covered this ground now three times.

7 HEARING EXAMINER GARNER: Sustained.

8 Q. (MR. BRAATEN CONTINUING) Does anyone at  
9 Summit know the answer to that question?

10 MR. BENDER: Objection.

11 MR. BRAATEN: What's the objection?

12 HEARING EXAMINER GARNER: He can -- he can  
13 answer that one.

14 MR. BOESHANS: I don't know. It's not a  
15 question that I've raised with anybody at Summit.

16 Q. (MR. BRAATEN CONTINUING) Has anyone else  
17 at Summit raised the question with you or anyone  
18 else that you're aware of?

19 A. Not that I'm aware of.

20 Q. I apologize if someone did ask this, but  
21 there was a question earlier -- Mr. Powell, I think  
22 it might have been deferred to you, but -- or  
23 Mr. Boeshans -- with respect to the payments being  
24 made to landowners on the CO<sub>2</sub> stream, is that -- are  
25 those payments being made based on the full stream

502

1 or the actual CO<sub>2</sub> mass in the stream?

2 MR. BENDER: I'm going to object. You  
3 seem to be using the past tense. You said that we  
4 have paid or am I misunderstanding you?

5 MR. BRAATEN: Well, I can -- I'll just  
6 change it to avoid that.

7 MR. BENDER: Okay.

8 MR. BRAATEN: I see what you're saying.

9 Q. (MR. BRAATEN CONTINUING) So when you go  
10 to pay landowners for injections, is it your intent  
11 to pay based on the full stream of substances  
12 injected or the CO<sub>2</sub> mass in the stream?

13 A. The intent is to pay on the -- the full  
14 stream as it's defined in the storage agreement --

15 Q. Okay.

16 A. -- which is associated substances.

17 MR. BRAATEN: Okay. No further questions.

18 HEARING EXAMINER GARNER: I believe the  
19 staff might have some questions. Already answered?

20 Okay. Lawrence, any further witnesses?

21 MR. BENDER: Not at this time.

22 HEARING EXAMINER GARNER: Okay.

23 MR. BRAATEN: Could we take a break?

24 HEARING EXAMINER GARNER: Take a break  
25 before you call?

503

1 MR. BRAATEN: Yeah.

2 HEARING EXAMINER GARNER: Sure. Take a  
3 ten-minute break.

4 (Recessed at 4:42 p.m. and reconvened at  
5 4:59 p.m.)

6 HEARING EXAMINER GARNER: We are back on  
7 the record. Attorney Braaten, you can proceed with  
8 your first witness.

9 MR. BRAATEN: All right. We are calling  
10 Shane Bofto to appear by phone. Shane, can you  
11 hear me okay?

12 MR. BOFTO: I can hear you.

13 HEARING EXAMINER GARNER: Okay. Let me  
14 swear him in real quick.

15 MR. BRAATEN: Okay. Shane, the hearing  
16 examiner is going to swear you in.

17 **SHANE BOFTO,**  
18 being first duly sworn, was examined and testified  
19 as follows:

20 **DIRECT EXAMINATION**  
21 **BY MR. BRAATEN:**

22 Q. Shane, can you state your full name and  
23 spell your last name for us?

24 A. My name is Shane Bofto. Last name is  
25 B-o-f-t-o.

504

1 Q. And by whom are you employed?

2 A. HydroSolutions, Incorporated.

3 Q. And just generally speaking, what kind of  
4 company is HydroSolutions, Incorporated?

5 A. We're a services, disabled veteran-owned,  
6 small business associated with consulting and  
7 environmental and water resources.

8 Q. Okay. Can you describe your educational  
9 background, please?

10 A. Sure. I have a bachelor of science in  
11 chemical engineering from Montana State University  
12 and an M.B.A. from the University of Mary in  
13 Bismarck.

14 Q. And can you give us a description of your  
15 professional experience from college up until you  
16 began with HydroSolutions?

17 A. Sure. I initially out of college worked  
18 at a petroleum refinery in the environmental health  
19 and safety department. I then went to work out in  
20 Seattle where I focused on mining internationally,  
21 consulting primarily in water quality, acid rock  
22 drainage and treatment.

23 Following that, I moved back to Montana  
24 and was a general environmental engineering  
25 consultant and went through several companies till

505

1 I ended up here at HydroSolutions.

2 Q. And approximately how long have you been

3 working at HydroSolutions?

4 A. Since -- since 2004.

5 Q. And can I have you pull up Exhibit No.

6 LO-56, Shane?

7 A. I have it.

8 MR. BENDER: Can you just give me a minute

9 to get there?

10 MR. BRAATEN: It's his résumé.

11 MR. BENDER: Okay. I'm there. Thank you.

12 Q. (MR. BRAATEN CONTINUING) Does this

13 curriculum vitae accurately reflect your

14 educational and professional qualifications and

15 experience, Mr. Bofto?

16 A. Yes, it does.

17 MR. BRAATEN: Move to admit Exhibit LO-56.

18 HEARING EXAMINER GARNER: Any objections?

19 MR. BENDER: No objection.

20 HEARING EXAMINER GARNER: Motion granted.

21 Q. (MR. BRAATEN CONTINUING) And, Shane, can

22 you describe for us with respect to your work at

23 HydroSolutions the kinds of clients and the kinds

24 of work that you've been involved in?

25 A. At HydroSolutions, clients mainly consist

506

1 of private individuals, ag and ranching clients,

2 federal, state and local governments and

3 municipalities. We have a GSA contract with the

4 federal government. We work with developers,

5 conservation groups and other NGOs and then

6 companies including mining, oil and gas pipelines,

7 and we also work with attorneys.

8 Q. And as a general matter, you mentioned

9 environmental consulting services, but can you give

10 us just some specific examples of the kinds of

11 projects and the kinds of consult -- different

12 kinds of consulting work that the folks at

13 HydroSolutions do?

14 A. Generally, we provide independent services

15 and environmental engineering, hydrogeology,

16 remedial investigations, remediation, permitting,

17 water resource development, compliance, due

18 diligence, environmental impact statements and

19 expert work.

20 Q. And, Mr. Bofto, are you familiar with the

21 applications and the Class VI well permit

22 applications that bring us to the hearing today?

23 A. Yes, I've briefly reviewed them.

24 Q. And do you have any -- we've talked

25 generally about the experience of HydroSolutions

507

1 and your experience. Do you have any experience on

2 particular or specific projects that you think

3 informs your ability to work on -- or work in this

4 proceeding or on this matter?

5 A. Yes. Several projects come to mind. In

6 2011, the Wyoming Land Quality Division issued an

7 RFP that resulted in a competitive bid, and

8 HydroSolutions was hired where I was the project

9 manager to look at mining regulations in Wyoming,

10 specifically with respect to rare earth elements in

11 mining. And we reviewed all of the regulations and

12 permitting process with respect to Wyoming and

13 implications of kind of a different mining type

14 that the state wasn't used to seeing. It was out

15 of the ordinary.

16 And following that, the Montana Board of

17 Oil and Gas Conservation issued an RFP and we were

18 awarded that to explore primacy for the Class VI

19 program in 2014. They were looking at setting up a

20 program and reviewing it as an exploratory project

21 to see if they wanted to gain primacy, and this was

22 about the time -- a little after the time North

23 Dakota did that same pursuit, so we followed it

24 very closely.

25 Q. And so did Montana end up submitting an

508

1 application to obtain primacy for its Class VI

2 program?

3 A. We provided the State with a draft program

4 and we went back and forth with them, and

5 ultimately they had an administrative decision at

6 that time to not submit for primacy.

7 Q. And as you were working on the -- drafting

8 the Class VI program for Montana, did you review

9 any documents or guidance that informed your

10 understanding of how to develop a Class VI program?

11 A. Yes. I heavily relied on a lot of BPA

12 documents. Specifically for the Class VI program,

13 there were a lot of guidance documents associated

14 with implementing programs, well characterization,

15 area of review, recordkeeping, to name a few.

16 Q. Can I have you turn to Exhibit LO-18?

17 A. I have it.

18 Q. Is this one of the guidance documents you

19 just referenced that helped inform your

20 understanding of the Class VI program while you

21 were drafting Montana's regulations?

22 A. Yes, it was one of the documents I used to

23 understand and outline our draft program.

24 Q. And can you just describe briefly the

25 topic of this guidance?

509

1     **A.** Sure. The guidance generally provides  
 2 information regarding modeling and recommendations  
 3 for delineating the area of review. It also  
 4 describes the circumstances under which the AOR or  
 5 area of review is to be reevaluated, and also  
 6 describes how to perform an AOR reevaluation and  
 7 development of corrective actions.  
 8     **Q.** Okay. Let me have you turn to  
 9 Exhibit LO-19.  
 10    **A.** All right. I have it.  
 11    **Q.** Is this also one of the documents you  
 12 referenced that you reviewed to inform your  
 13 understanding of Class VI regulatory regimes?  
 14    **A.** Yes, it was one of the documents I used to  
 15 understand and so outline the draft program.  
 16    **Q.** And can you just describe generally what  
 17 the topic of this document is and what it covers?  
 18    **A.** It provided a basic framework for the  
 19 permitting process and the required activities  
 20 through the Class VI injection well and activities  
 21 associated with that.  
 22    **Q.** Okay. Can I have you turn to  
 23 Exhibit LO-20?  
 24    **A.** I have it up.  
 25    **Q.** Is this also one of the guidance documents

510

1 you referenced a moment ago that informed your  
 2 understanding of the Class VI well program when you  
 3 were drafting Montana's regulations?  
 4    **A.** Yes. I used it similar to the others.  
 5    **Q.** Okay. And just generally speaking, what  
 6 does this guidance document cover topically?  
 7    **A.** I would say it provides a general outline  
 8 of the data to be collected and how to use the data  
 9 to identify potential risks and eliminate  
 10 unacceptable sites. It also provides information  
 11 for inputs into whatever geologic model is chosen  
 12 for use to evaluate any geological modeling.  
 13    **Q.** Okay. And now I'm going to have you --  
 14 it's marked a little out of order here, but there's  
 15 an Exhibit LO-82. I'll have you switch -- or flip  
 16 to Exhibit LO-82.  
 17           MR. BRAATEN: And, Lawrence this one  
 18 didn't get into the binder. I've got an extra  
 19 copy.  
 20           MR. BOFTO: Okay. I'm pulling it up.  
 21 Yes, I have this one.  
 22    **Q.** (MR. BRAATEN CONTINUING) I'm sorry,  
 23 Mr. Bofto, I might have missed it. Did you get  
 24 yourself to that exhibit?  
 25    **A.** Yes, I have -- have that exhibit, the one

511

1 for recordkeeping and reporting, generally.  
 2    **Q.** And specifically Exhibit 82 that indicates  
 3 it's the Underground Injection Control Program  
 4 Class VI Well Recordkeeping, Reporting, and Data  
 5 Management Guidance for Owners and Operators. Is  
 6 that the exhibit you have up?  
 7    **A.** Yes.  
 8    **Q.** Okay. Is this also one of the guidance  
 9 documents that you reviewed that informs your  
 10 understanding of the Class VI program that you used  
 11 in developing Montana's regulation?  
 12    **A.** Yes.  
 13    **Q.** Okay.  
 14           MR. BRAATEN: Move to admit Exhibits 18,  
 15 19, 20 and 82.  
 16           HEARING EXAMINER GARNER: Any objections?  
 17           MR. BENDER: No objection.  
 18           HEARING EXAMINER GARNER: Exhibits are  
 19 admitted.  
 20    **Q.** (MR. BRAATEN CONTINUING) Mr. Bofto, can I  
 21 have you now open up -- or turn to Exhibit No. 21?  
 22    **A.** I have that up.  
 23    **Q.** Do you have an understanding of what the  
 24 first two sentences of this data tool mean?  
 25    **A.** Yes.

512

1    **Q.** And can you tell us what that is?  
 2    **A.** Under the rule that's cited there, that  
 3 the owners and operators must submit the project  
 4 information -- their geological sequestration  
 5 project information directly to the EPA and I take  
 6 it through the geologic sequestration data tool in  
 7 that this requirement applies regardless of  
 8 primacy, whether it's still EPA or a particular  
 9 state or entity has primacy.  
 10    **Q.** Mr. Bofto, are you ready, willing and able  
 11 and have you been ready, willing and able for the  
 12 past three weeks to assist in running and analyzing  
 13 models related to these Class VI well applications  
 14 had you received data and input files to do so?  
 15    **A.** I'm capable and ready to run the  
 16 geochemical model PHREEQ, given that if I had the  
 17 input files and the right thermal dynamic database  
 18 or a reference to it if -- if the reference one  
 19 that comes with the model, is unaltered.  
 20           MR. BRAATEN: No further questions.  
 21           HEARING EXAMINER GARNER: Mr. Bender, any  
 22 questions?  
 23           MR. BENDER: Yeah, I do.  
 24  
 25

513

**1 CROSS-EXAMINATION**

**2 BY MR. BENDER:**

**3 Q.** Mr. Bofoto [sic], my name is Lawrence

**4 Bender and I represent the applicant, Summit, in**

**5 this case. Nice to meet you today.**

**6 A.** Nice to meet you.

**7 Q.** Okay.

**8 A.** My name is Bofto.

**9 Q.** Okay. Thank you for correcting me. I

**10 appreciate that. Do you mind if I call --**

**11 A.** No problem.

**12 Q.** Do you mind if I call you Shane?

**13 A.** Please do.

**14 Q.** Okay. Thank you. I want to just delve a

**15 bit into your discussion about what you did for the**

**16 State of Montana. First of all, what was the time**

**17 period in which you were working on that? I think**

**18 you said it was about the time that North Dakota**

**19 was adopting its rules, but I want to make sure**

**20 that I understood that correctly.**

**21 A.** Yes. I believe I started it in 2012, but

**22 a lot of these documents that I had just referenced**

**23 were in draft form, so a lot of it we waited for**

**24 the final versions of the EPA guidance documents to**

**25 be issued. And I believe my last final draft was**

514

**1 submitted to the Board of Oil and Gas following**

**2 discussions with them in mid to late 2014.**

**3 Q.** Okay. And when you -- when you referred

**4 to these documents were in draft form, I'm sure**

**5 you're talking about Exhibits LO-18, 19 -- let's**

**6 see here -- looks like 20 and is it 83?**

**7 MR. BRAATEN:** 82.

**8 Q.** (MR. BENDER CONTINUING) 82. Is that

**9 correct?**

**10 A.** They may have included some of those, but

**11 there were also some other guidance documents and**

**12 some of the things I'm trying to recall with the**

**13 environmental justice, bonding, things like that.**

**14 So that was why we waited a little while longer so**

**15 we could work with final documents that were**

**16 included. I think they're currently included on**

**17 EPA's Class VI website.**

**18 Q.** And what was it that you were requested to

**19 do by the Montana Oil and Gas Conservation**

**20 Commission?**

**21 A.** To review that type of information and

**22 draft a program that the State could use for their**

**23 primacy application should they desire to go after**

**24 primacy for the Class VI program.**

**25 Q.** And were involved in drafting the statutes

515

**1 that were necessary for the Montana Board of Oil**

**2 and Gas to adopt the rules or were you -- was that**

**3 statutory enactment already in place and all you**

**4 were asked to do was prepare the regulations?**

**5 A.** I was asked -- I was not involved with the

**6 statutes or anything like that. I was just**

**7 involved with gathering information that the board**

**8 needed to get the primacy application in place.**

**9 Q.** Are the statutes already in place in

**10 Montana and that all they're lacking at this point**

**11 in time is the regulations?**

**12 A.** I believe at that time there was a statute

**13 associated with it that was in place.**

**14 Q.** Okay.

**15 A.** It's been a while, but I seem to recall it

**16 was in place prior to them issuing approval for us**

**17 to do this work.**

**18 Q.** Okay. And I believe you said you started

**19 in 2012, probably finished in 2014; is that**

**20 correct?**

**21 A.** That sounds about right.

**22 Q.** Okay. Approximately -- well, strike that.

**23 During that period of time, were you**

**24 working full-time on this project?**

**25 A.** No.

516

**1 Q.** Okay. Were you working on the project by

**2 yourself?**

**3 A.** No. I was part of a team of other

**4 consultants and internal people. We had an**

**5 attorney because there was a portion where we had**

**6 to draft a letter from I believe the attorney**

**7 general or something to EPA and there were several**

**8 other documents that needed to be drafted that were**

**9 best suited for an attorney. And I had another**

**10 company that had petroleum engineers and petroleum**

**11 geologists associated that were reviewing some of**

**12 the draft documents at that time as well.**

**13 Q.** Okay. Well, thank you for that. I had

**14 misunderstood your testimony. I thought that you**

**15 were primarily responsible for doing all the work.**

**16 But since it was a team, let me ask you a couple**

**17 questions about that. What were -- what were your**

**18 specific responsibilities on that team?**

**19 A.** I was the project manager, and areas -- I

**20 would collect information as well as derive**

**21 information that I could and I put them into the**

**22 draft program. I took and I followed a lot of the**

**23 guidance to establish, you know, a general**

**24 procedure for permitting.**

**25 Q.** And did you ultimately draft some rules

517

1 that were submitted to the Oil and Gas Conservation  
 2 Commission?  
 3 **A.** Not at that time.  
 4 **Q.** When you say "not at that time," you're  
 5 talking about the period from 2012 to 2014?  
 6 **A.** I'm talking -- well, I never drafted any  
 7 rules based on the draft program.  
 8 **Q.** Okay. I misunderstood you then. I -- I  
 9 had understood you to testify when Mr. Braaten was  
 10 asking you questions that you drafted the rules but  
 11 the -- the board ultimately made a decision that it  
 12 was not going to adopt the rules. Did I  
 13 misunderstand?  
 14 **A.** I drafted a permitting program for  
 15 somebody that we could run past EPA so someone  
 16 could get a permit for a Class VI well should  
 17 Montana get primacy.  
 18 **Q.** Okay.  
 19 **A.** Does that make sense?  
 20 **Q.** I think so.  
 21 Do you know why the board never went  
 22 forward with the rules?  
 23 **A.** No, that was an administrative decision  
 24 far above my pay grade.  
 25 **Q.** Okay. Let's talk a little bit more about

518

1 your experience. You've explained to us that as a  
 2 result of reviewing these guidance documents that  
 3 have now been entered into the record, I think it  
 4 was 17, 18, 19, 20 and also 82, you were involved  
 5 in this project. Have you ever been involved in  
 6 making application in a state that has primacy for  
 7 a Class VI permit?  
 8 **A.** No.  
 9 **Q.** Okay. You haven't been -- I apologize. I  
 10 wasn't listening to my question very well when I  
 11 asked it. Did I -- well, let me rephrase it.  
 12 Have you ever been involved in any way in  
 13 making a Class VI application to a state that has  
 14 primacy?  
 15 **A.** No.  
 16 **Q.** Okay. Have you ever reviewed an  
 17 application, other than the one before the  
 18 Commission -- or the ones that are before the  
 19 Commission today, for a Class VI permit?  
 20 **A.** I'm trying to recall. I may have looked  
 21 at some when I was drafting a program. I have a  
 22 faint recollection that I tried to look at others  
 23 that had gone through EPA at the time. I just  
 24 cannot recall the specifics.  
 25 **Q.** Yeah. And I apologize, I think I said

519

1 this, but I asked -- my question was specific to  
 2 being involved in an application with a state that  
 3 had primacy.  
 4 **A.** None with a state that had primacy.  
 5 **Q.** Other than the applications that are  
 6 before the Commission today, have you ever reviewed  
 7 an application for a Class VI well?  
 8 **A.** Back to my previous statement, I believe I  
 9 did when I was drafting the program to look at what  
 10 an application looks like. I just don't recall  
 11 because it was so long ago on what it was.  
 12 **Q.** That would have been back in the 2012  
 13 period, 2014 period; is that right?  
 14 **A.** Somewhere in there.  
 15 **Q.** And would those have been applications  
 16 before the EPA?  
 17 **A.** Yes.  
 18 **Q.** Okay. When were you hired by the  
 19 intervenors in this case?  
 20 **A.** Oh, it's been a month or so.  
 21 **Q.** Okay. You don't know the exact date? I  
 22 mean, today is the 11th. Would it have been  
 23 probably May 11?  
 24 **A.** It could have been about that time, but I  
 25 don't know specifics.

520

1 **Q.** What were you asked to do on May -- on  
 2 May 11?  
 3 **MR. BRAATEN:** I'm going to object to that  
 4 characterization of testimony. I don't believe he  
 5 testified to doing something on the 11th.  
 6 **HEARING EXAMINER GARNER:** Overruled.  
 7 **Q.** (MR. BENDER CONTINUING) Okay. What --  
 8 okay. I guess you can answer the question.  
 9 **A.** What was I -- could you repeat that  
 10 question again?  
 11 **Q.** What were you asked to do when you were  
 12 hired for this project?  
 13 **MR. BRAATEN:** I'm going to object to  
 14 questions eliciting communications between me and  
 15 the experts.  
 16 **HEARING EXAMINER GARNER:** Overruled.  
 17 **MR. BRAATEN:** You can go ahead, Shane.  
 18 **MR. BOFTO:** Oh, okay. Just to provide my  
 19 experience with the Class VI guidance and programs  
 20 that I had early on and just my general  
 21 environmental background information.  
 22 **Q.** (MR. BENDER CONTINUING) And how many  
 23 hours do you believe you've worked on this project  
 24 since you were retained?  
 25 **A.** Outside of this, probably 15 reviewing

521

1 documents and such and --

2 Q. And have you had an opportunity to review

3 each one of the -- what I'm going to refer to as

4 the final form of applications for the three

5 applications that are before the Commission?

6 A. I've generally reviewed them, yes, and --

7 I'm trying to think if I've done any others. So

8 I'd say I generally reviewed the three

9 applications.

10 Q. Okay. And when you say reviewed them, did

11 you just -- did you just read them or did you do

12 anything beyond reading? Did you do any

13 independent research?

14 A. I looked closely at some of the models on

15 what were being used and what they did exactly.

16 Q. Okay. And if I -- and please correct me

17 if I'm wrong, Shane, but I understood your

18 testimony when Mr. Braaten was asking you some

19 questions that you -- if you'd had the materials

20 that he requested from the Industrial Commission,

21 you could have run a model in a relatively short

22 period of time. Was that your testimony?

23 A. Yes. I specifically referenced the

24 PHREEQC model by U -- that is put out by the USGS.

25 Q. Okay. And do you have the necessary

522

1 software packages that you would need to run the

2 model?

3 A. Yes, I do. It's on my computer now.

4 Q. Okay. Can you tell me what some of those

5 programs are?

6 A. I'm specifically talking about the PHREEQC

7 model. It's downloaded freely from the USGS, and I

8 have routinely used the program through my career

9 and have used it to write specific reports.

10 Q. And do you believe that that's the only

11 software you would need to analyze the information

12 that Summit has filed with the Industrial

13 Commission on this matter?

14 A. It's the only one that I'm focused on.

15 Q. Okay. Do you agree with me that there are

16 other software programs?

17 MR. BRAATEN: I'm going to object to the

18 form of the question.

19 MR. BENDER: What's that?

20 MR. BRAATEN: I object to the form of the

21 question. There are.

22 MR. BENDER: Well, let him answer.

23 HEARING EXAMINER GARNER: If he can

24 understand it, he can answer it.

25 MR. BOFTO: There are numerous geochemical

523

1 models outside of PHREEQC. There's Geochem

2 Workbench® that I've used and several others, but

3 the application specifically said they used PHREEQC

4 and that was the one I was focused on.

5 Q. (MR. BENDER CONTINUING) But you don't

6 know if this PHREEQC is the only program that would

7 be necessary to evaluate the information that's

8 been supplied to the Commission, do you?

9 MR. BRAATEN: For the --

10 MR. BOFTO: I'm just going off the

11 application that said that was the program that

12 they used.

13 Q. (MR. BENDER CONTINUING) Okay.

14 A. I did not see any other geochemical

15 programs to evaluate the upper and lower confining

16 units.

17 Q. Okay. Tell me a little bit about your

18 experience working in North Dakota. I know you

19 said you went to the University of Mary. Have you

20 done any work in your current role with -- I

21 believe it's HydroSolutions. Have you worked in

22 North Dakota with that company?

23 A. Yes. I've had probably -- probably six or

24 seven projects in the last ten years in North

25 Dakota.

524

1 Q. What were those projects?

2 A. Some of them were work with attorneys for

3 oil and gas impacted sites. Done some incidental

4 air quality work there from facilities. Trying to

5 think. Looked at different reviewing remediation

6 plans for cleanup for saline impacts or produced

7 water impacts.

8 Q. Okay. So it sounds to me, and please

9 correct me if I'm wrong, that most of that work

10 that you've done in North Dakota has been from the

11 standpoint of surface issues; is that a -- is that

12 a fair statement?

13 A. No. There's been other issues associated

14 with contaminated groundwater and cleanup.

15 Q. Okay. Have you ever been involved in

16 North Dakota in making application to the

17 Commission relative to saltwater disposal wells or

18 Class II wells?

19 A. I've been part of such projects exploring

20 commercial Class II saltwater disposal wells.

21 Q. Ever prepare an application to the

22 Commission for a saltwater disposal well?

23 A. I've provided information for somebody

24 else to submit a Class II application.

25 Q. Okay. What sort of information did you

525

1 supply?

2 **A.** Looked at things like deriving maximum

3 pressure at the wellhead. Working with other

4 geologists in my company, suitable formations.

5 Looking at areas of review for other wells that

6 could be within the area of review, things along

7 that line.

8 **Q.** But you never were involved in a saltwater

9 disposal application in North Dakota where you were

10 the lead individual in making that application;

11 isn't that correct?

12 **A.** That'd be fair to say.

13 **MR. BENDER:** No further questions.

14 **HEARING EXAMINER GARNER:** Any questions

15 from the staff? Any redirect, Mr. Braaten? Oh,

16 I'm sorry, you do.

**EXAMINATION**

17 **BY MR. HELMS:**

18 **Q.** Shane, this is Lynn Helms with the

19 Industrial Commission. Nice to meet you, maybe

20 some day face-to-face.

21 **A.** Nice to meet you.

22 **Q.** Yes.

23 North Dakota made its application for

24 Class VI primacy on June 21 of 2013 and received

526

1 final approval April 24 of 2018. Shane, did you

2 comment on North Dakota's application?

3 **A.** No, I did not.

4 **Q.** Did you review the North Dakota documents

5 when you were preparing Montana's prospective

6 documents?

7 **A.** I seem to recall that we were following at

8 that time whether North Dakota was going to draft

9 their own specific rules or adopt it by rule, and

10 that was -- we had a lot of discussions about that

11 on whether Montana should or shouldn't, and I seem

12 to recall North Dakota going back and forth maybe

13 once on what the appropriate action was, and we

14 were going to try to learn at that point from you.

15 **MR. HELMS:** Okay. Thank you.

**REDIRECT EXAMINATION**

17 **BY MR. BRAATEN:**

18 **Q.** Mr. Bofto, do you have a copy of -- well,

19 do you recall signing an engagement letter for this

20 matter?

21 **A.** Yes.

22 **Q.** And do you recall the date of that?

23 **A.** May 1.

24 **MR. BRAATEN:** Okay. No further questions.

25 **HEARING EXAMINER GARNER:** Okay. You can

527

1 call your next witness. Can I get the name?

2 **MR. BRAATEN:** Ted Doughty.

3 **HEARING EXAMINER GARNER:** Doughty. Okay.

4 **MR. BRAATEN:** Yeah.

5 **MS. ZASTE:** He has a first initial, P, but

6 he goes by Ted. So it's P. Ted Doughty.

7 **HEARING EXAMINER GARNER:** Gotcha.

8 **MR. BRAATEN:** Mr. Doughty, we're getting

9 some feedback from you. Can you mute -- well, no,

10 we're still getting feedback. Can you mute -- what

11 was it -- what did you -- okay.

12 **P. TED DOUGHTY,**

13 being first duly sworn, was examined and testified

14 as follows:

**DIRECT EXAMINATION**

16 **BY MR. BRAATEN:**

17 **Q.** Mr. Doughty, can you state your full name

18 and spell your last name for us, please?

19 **A.** It's Paul Ted Doughty, D-o-u-g-h-t-y.

20 **Q.** And you go by Ted; right?

21 **A.** Yes, I do.

22 **Q.** Okay. Can you tell me briefly your

23 educational background?

24 **A.** I have a bachelor's in geology from

25 Washington University in St. Louis, a master's in

528

1 geophysics from the University of Montana, and a

2 PhD from Queen's University in Ontario, Canada.

3 **Q.** And can you start by just briefly

4 describing your professional background?

5 **A.** Yes, sir. So I've worked with Exxon -- I

6 worked in the Exxon research lab for four years in

7 the late '90s. I taught at Eastern Washington

8 University for eight years as a professor. And

9 since 2008 I've been a consultant on my own working

10 for various companies like Talisman Energy,

11 Halliburton, various other companies in the

12 Rockies.

13 **Q.** Can you tell us a little bit about the

14 kinds of work you did with your time at Exxon?

15 **A.** Yes. So at Exxon I was in the fault --

16 fault seal group, also did -- which is analyzing

17 how fault seal in the various environments in

18 the -- in the -- we did a whole research project

19 looking at fault seal across the entire -- all the

20 basins that Exxon worked in.

21 I also did 3D seismic interpretation in

22 various basins across the world. Did a lot of

23 field research on the Bakken and various other

24 groups in the western U.S. as analogs for

25 subsurface formations.

529

1 Q. And can I have you pull up in front of  
2 you, Ted, the Exhibit LO-58?

3 A. I'm not in the office, so if you describe  
4 it to me, though, I can do that.

5 Q. Do you recall the information contained on  
6 your curriculum vitae?

7 A. Your -- can you repeat the question?

8 Q. So I'll tell you Exhibit 58 is your  
9 curriculum vitae. Are you familiar with --

10 A. Oh.

11 Q. -- the contents of your curriculum vitae?

12 A. Oh, yes. Yes, sir. Yes.

13 Q. Okay. And does that accurately describe  
14 your educational and professional background and  
15 experience.

16 A. Yes, sir. With the exception of several  
17 items that I left off that I did recently. I  
18 actually was the well site geologist on the J-Loc  
19 Minnkota well that was drilled as part of their  
20 carbon sequestration project. I logged --  
21 personally logged 1600 feet of core on site for  
22 that project.

23 Q. Okay.

24 A. And I've also done a lot of helium  
25 exploration in the last, oh, six months.

530

1 MR. BRAATEN: Okay. Move to admit LO-58.  
2 HEARING EXAMINER GARNER: Any objection?  
3 MR. BENDER: No objection. Oh, thank you.  
4 No objection.

5 HEARING EXAMINER GARNER: The exhibit is  
6 admitted.

7 MR. BENDER: My mike was off.

8 HEARING EXAMINER GARNER: Exhibit is  
9 admitted.

10 Q. (MR. BRAATEN CONTINUING) And, Ted, did  
11 you review the applications submitted by EERC and  
12 Summit that bring us here today?

13 A. Yes, I have, in extensive detail.

14 Q. And can you start by just describing to us  
15 the areas of those applications regarding which you  
16 would have particular expertise?

17 A. Yes. So they have core data on the Broom  
18 Creek Formation of which I mentioned I personally  
19 logged all the J-Loc wells. So I'm familiar with  
20 that. Also I have expertise in 3D seismic  
21 interpretation. I haven't seen their 3D seismic,  
22 but it's a critical part of their application, as  
23 well as the formation mechanical integrity work  
24 that they did doing the testing in their test well.

25 Q. What data would you need in order to

531

1 create a PHI-H map to map out the porosity and  
2 permeability of a reservoir?

3 A. So from what I've seen of their  
4 applications, the -- there's only one -- no,  
5 there's three -- I think there's three -- there's  
6 two wells that are close together and another well  
7 in their AOR which encompasses about -- actually,  
8 I'm not sure how big the AOR is, but if you take  
9 their simulation area, there's 26 wells in the  
10 simulation area -- or the simulation area, there's  
11 26 wells. It's about a well per 55 square miles  
12 which is not very many data points. So within the  
13 AOR there's only 3 data points. There's no legacy  
14 wells.

15 So you would need to coordinate it, which  
16 they provided, but as well it appears like the  
17 seismic data was a critical part of how they  
18 defined the reservoir properties in the AOR.  
19 There's only -- like I mentioned, there's very few  
20 wells within the AOR. So we'd need access to the  
21 3D seismic to actually do a facies analysis to  
22 determine what the seismic data tells you about the  
23 reservoir within that AOR.

24 And within that application, there's only  
25 one map that shows the permeability distribution

532

1 within their stimulation -- their simulation area.  
2 Excuse me. So there's very little data within  
3 their application with which to evaluate exactly  
4 how they derive their permeability parameters for  
5 the AOR that they're applying for.

6 Q. Mr. Doughty, do you recall approximately  
7 how long ago you were asked about the possibility  
8 of working on this matter?

9 A. It was, what, a month ago, maybe three  
10 weeks ago, something like that.

11 Q. And are you ready, willing and able to  
12 conduct additional review and particularly review  
13 of seismic data if you receive it?

14 A. Yes, I am.

15 MR. BRAATEN: No further questions.

16 HEARING EXAMINER GARNER: Attorney Bender.

17 **CROSS-EXAMINATION**

18 **BY MR. BENDER:**

19 Q. Mr. Doughty, are you -- Mr. Doughty, are  
20 you in a position today to make any recommendations  
21 to the Commission as to whether this application  
22 should be approved or denied?

23 A. I am.

24 Q. And what are your conclusions?

25 A. I would recommend that it's denied on the

533

1 basis that the applicant did not -- has not  
2 provided enough of the data from which the  
3 Commission or another party could evaluate how they  
4 came up with some of their reservoir properties.

5 Q. Okay.

6 A. Without the 3D seismic, you cannot  
7 determine the distribution of permeability and  
8 porosity across the AOR.

9 Q. Okay. And I believe it was your testimony  
10 at this point in time all you have reviewed is the  
11 three applications; is that correct?

12 A. That is correct. And --

13 Q. And you haven't reviewed -- you haven't  
14 reviewed the other data that's on file with the  
15 Commission?

16 A. I've reviewed the data that's publicly  
17 available.

18 Q. Okay.

19 A. Yes.

20 Q. Did you -- have you seen a letter dated  
21 May 15, 2024, from Mr. Braaten to the Commission  
22 requesting certain information?

23 A. I have not seen the letter. I've heard  
24 that there's a motion to compel.

25 Q. Okay. Do you know if the Commission

535

1 A. Yep. J-Loc. Yep.

2 Q. So you know somewhat about that -- you  
3 know some things about that application that was  
4 made to the Commission for a Class VI well; is that  
5 correct?

6 A. I -- no. I don't -- I set the well. I  
7 described the core. I was not involved in anything  
8 after they drilled the well.

9 Q. You knew the --

10 A. But I.

11 Q. -- you know the Commission granted the  
12 application; correct?

13 A. Yes.

14 Q. Do --

15 A. But I wasn't involved in it. I do know  
16 what the core looked like and somewhat of the  
17 reservoir properties of the Broom Creek.

18 Q. And, you know, thank you for all that, but  
19 we can get through this a little bit quicker if you  
20 just answer my questions.

21 Do you know --

22 MR. BRAATEN: I think he did.

23 MR. BENDER: Well, I think he went on a  
24 little bit more than he needed to, but I'll move  
25 on.

534

1 indicates that they supplied that information to  
2 Mr. Braaten?

3 A. I do not.

4 Q. Okay. You talked a little bit about a  
5 PHI-H map, and I don't want to put -- I don't want  
6 to testify for you, but I understood you to say  
7 that a PHI-H map would have been important for the  
8 Commission in this case. Is that a -- is that a  
9 fair statement of your testimony?

10 A. Yes, that is a fair statement. If you --  
11 if you want to understand where the CO<sub>2</sub>'s going as  
12 you inject it, you need a PHI-H map to determine  
13 the -- the storage capacity to the formation.

14 Q. Okay. And you --

15 A. And like I -- like I said earlier, there's  
16 only three data points within the AOR. So I'm -- I  
17 don't quite understand how the EERC came up with  
18 such a complex map of permeability and porosity  
19 without having additional data. It should have  
20 been provided in their submittal.

21 Q. Okay. And I think you also indicated that  
22 you were involved -- you sat the -- the well for  
23 Minnkota's -- the J-Loc?

24 A. The J-Loc.

25 Q. Yeah, the J-Loc.

536

1 Q. (MR. BENDER CONTINUING) Do you know if  
2 Minnkota submitted a PHI-H map in its application?

3 A. I do not.

4 Q. Are you familiar with the application that  
5 was filed by Blue Flint?

6 A. No.

7 Q. Do you know if they submitted a PHI-H map?

8 A. I do not.

9 Q. Are you familiar with the application that  
10 was submitted by Dakota Gasification?

11 A. No.

12 Q. Do you know if they submitted a PHI map --  
13 PHI-H map?

14 A. No.

15 Q. Are you familiar with the application that  
16 was filed by Red Trail?

17 A. No.

18 Q. Do you know if they submitted a PHI-H map?

19 A. No.

20 Q. Do you know all those applications were  
21 granted by the Commission?

22 A. No.

23 MR. BENDER: No further questions.

24 HEARING EXAMINER GARNER: Any questions  
25 from the staff?

537

1 Redirect, Attorney Braaten?

2 MR. BRAATEN: No, I don't have any further

3 questions. Thank you very much, Mr. Doughty.

4 MR. DOUGHTY: Thank you.

5 HEARING EXAMINER GARNER: Okay. You can

6 call your next witness.

7 MR. BRAATEN: We are calling Paul Button.

8 HEARING EXAMINER GARNER: Button?

9 MR. BRAATEN: Yes.

10 **PAUL BUTTON,**

11 being first duly sworn, was examined and testified

12 as follows:

13 **DIRECT EXAMINATION**

14 **BY MR. BRAATEN:**

15 Q. Mr. Button, can you state your full name

16 and tell us -- well, let's start there. Just state

17 your full name, please.

18 A. My name is Paul Michael Button.

19 Q. And can you give us a business or

20 residential address?

21 A. My residential address is 1119 South Ophir

22 Street in Butte, Montana.

23 Q. All right. Can you tell us just a little

24 bit about your educational background?

25 A. I have a bachelor of science degree in

538

1 petroleum engineering from Montana Tech.

2 Q. All right. And tell us a bit about your

3 professional experience.

4 A. My professional experience is I've worked

5 26 years as a petroleum engineer. I started off my

6 career as a reservoir engineer for Marathon Oil

7 Company working the Yates Field in West Texas doing

8 simulation on gas oil gravity drainage with

9 nitrogen injection and then converting it over to

10 CO<sub>2</sub> injection.

11 From there I moved to -- on to Kinder

12 Morgan when they acquired the Yates asset. I did a

13 little bit of reservoir simulation on Yates, and

14 then I worked the SACROC CO<sub>2</sub> flood unit in Scurry

15 County, Texas.

16 After I left Kinder Morgan, I worked for

17 SM Energy in Billings, Montana, for a number of

18 years doing enhanced oil recovery studies on fields

19 in the state of Wyoming. Also worked several water

20 floods and shale development wells within the

21 Powder River Basin, Richland County, Montana, and a

22 little bit of experience in Divide County, North

23 Dakota.

24 From there I left SM Energy and I went out

25 on my own as a consultant. I did numerous

539

1 consulting jobs for multiple clients, including

2 purchase and acquisition, evaluation, State

3 evaluations and reservoir simulation for enhanced

4 oil recovery on the Poplar Dome in Montana.

5 I then joined a company called Poplar

6 Resources as a vice president where we implemented

7 a pilot for enhanced -- a nitrogen injection flood.

8 And I have been with that ever since.

9 And then I also started a startup for a

10 battery energy storage corporation. We do

11 compressed air energy storage. And I'm currently

12 working both the Poplar job, the consulting job,

13 and battery energy storage job.

14 Q. Okay. Can I have you turn in the exhibits

15 to what we marked as LO-57?

16 A. Yes.

17 Q. Let me know, do you have that in front of

18 you now?

19 A. Yes, I do.

20 Q. And what is Exhibit 57?

21 A. I would call it my résumé or CV.

22 Q. Okay. And does this CV accurately reflect

23 your educational and professional experience and

24 qualifications?

25 A. I would probably -- I caught a couple of

540

1 errors in here. The Button Petroleum Management,

2 it was no longer active until recently again, so I

3 would add that through 2024.

4 Q. Okay.

5 A. And I believe the name of the -- my

6 educational school is no longer accurate because

7 it's no longer Montana Tech of the University of

8 Montana. I believe it's the Montana Technological

9 University.

10 Q. Okay. Other than those, does the

11 Exhibit 57 accurately reflect your professional and

12 educational experience and qualifications?

13 A. Yes.

14 MR. BRAATEN: Move to admit Exhibit 57.

15 MR. BENDER: No objection.

16 HEARING EXAMINER GARNER: Exhibit is

17 admitted.

18 Q. (MR. BRAATEN CONTINUING) Mr. Button, can

19 you tell me if you have any experience with Class

20 II wells or permitting Class II wells?

21 A. Yes. I have permitted a num -- a number

22 of Class II wells in the state of Montana.

23 Q. And with respect to any of those Class II

24 wells, was it necessary to obtain an aquifer

25 exemption?

541

1 **A.** Yes. We worked on an aquifer exemption  
 2 for one of the wells within the Poplar unit, east  
 3 Poplar unit.  
 4 **Q.** Okay. Was there any kind of a volumetric  
 5 limit imposed as part of that aquifer exemption?  
 6 **A.** Yes, I believe so.  
 7 **MR. BENDER:** Objection. Relevance.  
 8 **HEARING EXAMINER GARNER:** Overruled.  
 9 **Q.** (MR. BRAATEN CONTINUING) And are you  
 10 familiar with the manner in which the volumetric  
 11 limits are calculated for aquifer exemptions by  
 12 either the EPA or state authorities?  
 13 **A.** I am familiar with how the volumetric  
 14 extensions were calculated and approved for the  
 15 permits that I worked on. Yes.  
 16 **Q.** Okay. And so with respect to the permits  
 17 you worked on, can you just provide a general  
 18 description of how those volumetric limits are  
 19 calculated for the aquifer exemptions?  
 20 **A.** Basically, these were pretty simple  
 21 calculations in that you would calculate the -- the  
 22 volume within a given X number of foot radius that  
 23 you believe you'll affect with the water injection,  
 24 you know, so you get a volume of a cylinder,  
 25 multiply it by your porosity, divide it by your

542

1 formation volume factor of water and that is the  
 2 volume that will be affected.  
 3 **Q.** Do you have experience with reservoir  
 4 modeling and -- well, you've already talked about  
 5 this. Can you tell us a little bit about the  
 6 experience you have with EOR and water floods with  
 7 respect specifically to field development analysis?  
 8 **A.** Yes. I've had several major modeling  
 9 projects over my career. The first one was for  
 10 Yates field. We spent quite a few years looking at  
 11 and running sensitivities on gas oil gravity  
 12 drainage, enhanced oil recovery process as far as  
 13 looking at gas oil contact movement speed versus  
 14 the drainage of oil from the matrix in the  
 15 reservoir. We also looked at viscosity effects  
 16 with the injection of different gases and the  
 17 swelling effects in the oil with different  
 18 composition of injected gases, whether it was  
 19 nitrogen, CO<sub>2</sub> or a mixture of recycled gas to  
 20 determine the most effective recovery and most  
 21 economic recovery mechanism with an EOR process.  
 22 My other major modeling project which I've  
 23 worked on most recently is developing a full-field  
 24 simulation model to model the history and also the  
 25 enhanced oil recovery potential for Poplar Dome in

543

1 Montana, the East Poplar unit. That is a  
 2 70-year-old field that's probably undergone primary  
 3 depletion with a strong natural water drive where I  
 4 deal with gas on the top of it and expose the  
 5 matrix to gas oil gravity drainage and determine if  
 6 that was an economically feasible project.  
 7 **Q.** And can you tell us about any other  
 8 specific experiences you have related to doing  
 9 reservoir modeling and analysis?  
 10 **A.** I'm currently working on setting up the  
 11 parameters to look at natural -- or compressed air  
 12 storage in salt caverns and looking at the pressure  
 13 volume and temperature effects and the rock stress  
 14 effects within salt caverns to determine the  
 15 feasibility for the active storage reservoirs.  
 16 **Q.** Mr. Button, do you have an understanding  
 17 of different ways that pore space can be used in a  
 18 commercial manner?  
 19 **A.** Yes, I do.  
 20 **Q.** And if a landowner wants to make a  
 21 commercial use of pore space, can you tell us what  
 22 you understand to be the options for making that  
 23 commercial use of pore space?  
 24 **A.** It's basically three options of which  
 25 there can be multiple derivatives of each option,

544

1 but either you remove fluid and market it as a --  
 2 as a quantity, you temporarily store something in  
 3 your pore space, or you permanently sequester  
 4 something in your pore space.  
 5 **Q.** And how would you assess the degree to  
 6 which the pore space of a given landowner is being  
 7 used in a way that forecloses other commercial  
 8 uses?  
 9 **A.** I guess I would attempt to evaluate the  
 10 change in the pressure volume temperature of the  
 11 fluids contained within the pore space, and knowing  
 12 that there are certain constraints on the upper end  
 13 of the pressure and certain constraints on the  
 14 lower end of the pressure and try to determine what  
 15 the current impacts, what the proposed impacts and  
 16 what the -- the final limits were of that pore  
 17 space.  
 18 **Q.** Mr. Button, if you were provided with the  
 19 data decks and input files required to run models  
 20 in CMG and Schlumberger's Petrel software for this  
 21 project, would you be ready, willing and able to  
 22 run those models and analyze them for the  
 23 intervenors?  
 24 **A.** The CMG model, I would be ready to upload  
 25 those and run those and do some sensitivity

545

1 analysis on those models. As far as the Petrel  
 2 model, the Petrel model is a static model. It's  
 3 basically a geologic database, so those -- unless  
 4 you're trying to redistribute properties or  
 5 something like that, there's -- it's not a dynamic  
 6 model where the answer changes, so I don't think  
 7 there's nothing -- there's nothing to run there.  
 8 MR. BRAATEN: Understood. No further  
 9 questions.  
 10 HEARING EXAMINER GARNER: Attorney Bender.  
 11 **CROSS-EXAMINATION**  
 12 **BY MR. BENDER:**  
 13 Q. Mr. Button, you -- you spent some time  
 14 describing your experience as an engineer and  
 15 involved in various enhanced oil recovery projects  
 16 around the country. Is that a fair statement?  
 17 A. Yes.  
 18 Q. And you also talked about a compressed air  
 19 project that you're working on. Do you recall  
 20 that?  
 21 A. Yes.  
 22 Q. And in those projects, both the enhanced  
 23 oil recovery projects and the compressed air  
 24 project, you were involved in running some models;  
 25 is that a fair statement?

546

1 A. Yes.  
 2 Q. Okay. Would you agree with me that  
 3 running -- preparing and running models for  
 4 enhanced oil recovery projects and a compressed air  
 5 project is different than preparing and running a  
 6 model for CO<sub>2</sub> storage?  
 7 A. Can you clarify what you mean by  
 8 "different"?  
 9 Q. Well, if you've run -- or prepared and run  
 10 models for CO<sub>2</sub> on a number of projects, are you  
 11 going to have more knowledge and experience than  
 12 someone who has not run models for CO<sub>2</sub>, only for  
 13 enhanced oil recovery and compressed air?  
 14 A. Well, the models that I've ran for  
 15 enhanced oil recovery, especially for when I worked  
 16 the Yates field, those directly involved the  
 17 injection of CO<sub>2</sub> in the pore space --  
 18 Q. Okay.  
 19 A. -- so they're not too dissimilar. The  
 20 only -- the main dissimilar between those two  
 21 models is that in the carbon sequestration, the  
 22 CO<sub>2</sub>'s interaction is primarily with water, where in  
 23 those other models it was with both water and oil.  
 24 So they were actually more complex.  
 25 Q. Okay. Are you familiar with the data

547

1 requests that Mr. Braaten made to the Industrial  
 2 Commission?  
 3 A. I --  
 4 Q. Pardon me?  
 5 A. Yes, I am.  
 6 Q. Okay.  
 7 A. Yes, I am.  
 8 Q. Okay. And are you familiar with the type  
 9 of data that would be contained within a CMG data  
 10 file?  
 11 A. Yes, I am.  
 12 Q. Could someone produce a PHI-H map if they  
 13 had a CMG data file?  
 14 A. I believe that within CMG's program you  
 15 could get that, yes.  
 16 Q. Okay. And are you aware that it's the --  
 17 in the Commission's position that they provided a  
 18 CMG data file to Mr. Braaten?  
 19 A. I am not aware of the CMG data file, if  
 20 Mr. Braaten is in possession of it or -- I am  
 21 certainly not in possession of that CMG data file.  
 22 Q. He didn't provide it to you?  
 23 A. I have not seen it, no.  
 24 Q. Is it a fair statement that -- well, let  
 25 me back -- strike that.

548

1 A. Let me --  
 2 Q. How many hours -- just let me ask the  
 3 questions. Just let me ask the questions.  
 4 A. Okay.  
 5 Q. How many hours of time have you spent  
 6 working on this project?  
 7 A. I have -- up until the start of this  
 8 hearing, I spent 14-and-a-half hours working on it.  
 9 Q. Okay. And what were you asked to do?  
 10 MR. BRAATEN: Same objection to privileged  
 11 communications with experts.  
 12 HEARING EXAMINER GARNER: Overruled.  
 13 MR. BUTTON: What was I asked to do?  
 14 Q. (MR. BENDER CONTINUING) Yes.  
 15 A. I was asked by Mr. Braaten to evaluate the  
 16 impact of the pore space of his clients.  
 17 Q. Okay. And to do that at this point in  
 18 time, all you have done is reviewed the  
 19 applications that were submitted to the Commission;  
 20 is that correct?  
 21 A. No.  
 22 Q. You didn't review the applications?  
 23 A. I did review the applications, but that is  
 24 not all that I've done.  
 25 Q. What else did you do in the 15 hours that

549

1 you've spent on this project?

2 **A.** I have looked through the well files of

3 the wells in the immediate area to see what

4 information was available.

5 **Q.** How many hours did you spend reviewing the

6 applications?

7 **A.** Probably the majority of the 14 hours.

8 **Q.** Okay.

9 **A.** But I don't have a specific number, but I

10 could get that number for you.

11 **Q.** More than ten?

12 **A.** I would say yes. Probably in the ten

13 range.

14 **Q.** Well, you said more than 10. Would it be

15 11 or 12?

16 **A.** We'll go with more than ten.

17 **Q.** Okay. And then the other -- the only

18 other time you would have -- well, strike that.

19 The additional time you would have spent

20 between 10 hours and 15 hours would have been to

21 review some logs; is that what you said?

22 **A.** I did not say I reviewed logs. I said I

23 reviewed the well files on the Commission website.

24 **Q.** Okay. What are in the well files?

25 **A.** The well files contain the core reports

550

1 and some of that type of information. They have

2 like casing size and the drilling completion

3 information, things like that.

4 **Q.** Okay. Would you agree with me that you

5 really haven't reviewed enough to make any sort of

6 recommendation to the Commission whether this

7 application should be granted or denied?

8 **A.** Absolutely.

9 **MR. BENDER:** Okay. No further questions.

10 **HEARING EXAMINER GARNER:** Any questions

11 from the staff?

12 **Mr. Braaten,** any redirect?

13 **MR. BUTTON:** Are you waiting for a

14 response from me?

15 **MR. BRAATEN:** Sorry. No, Mr. Button, that

16 was on me. I'm just taking a moment to review my

17 notes to see if I have anything else to ask. Give

18 me one moment, please.

19 I have nothing further.

20 **HEARING EXAMINER GARNER:** Okay. I know

21 you said you only expected to get through three

22 witnesses, but you still have 20 minutes.

23 **MR. BRAATEN:** I'm -- yeah, I'm sorry, I

24 have one more, but he is no longer available.

25 **HEARING EXAMINER GARNER:** He's not

551

1 available right now?

2 **MR. BRAATEN:** Right.

3 **HEARING EXAMINER GARNER:** Let's go off the

4 record for a minute.

5 (Recessed at 6:10 p.m. and reconvened at

6 6:11 p.m.)

7 **HEARING EXAMINER GARNER:** Okay. We are

8 back on the record, and we are going to recess

9 these hearings and resume tomorrow morning at

10 9 a.m. That concludes our hearings for the day.

11 (Recessed at 6:12 p.m., Wednesday, the 12th

12 day of June, 2024.)

1 **CERTIFICATE OF COURT REPORTER**

2

3 I, Stephanie A. Smith, a Registered

4 Professional Reporter,

5 DO HEREBY CERTIFY that I recorded in

6 shorthand the foregoing proceedings had and made of

7 record at the time and place hereinbefore

8 indicated.

9 I DO HEREBY FURTHER CERTIFY that the

10 foregoing typewritten pages contain an accurate

11 transcript of my shorthand notes then and there

12 taken.

13 Dated at Bismarck, North Dakota, this 3rd

14 day of July, 2024.

**NORTH DAKOTA INDUSTRIAL COMMISSION**

**AUDIO TRANSCRIPTION**

## AUDIO RECORDING

IN RE: NORTH DAKOTA INDUSTRIAL COMMISSION

CASE NOS. 30869 and 30880

(Due to the quality of the recorded media, portions were unable to be transcribed and include inaudible portions. The transcript may also include misinterpreted words and/or unidentified speakers. The transcriber was not present at the time of the recording; therefore, this transcript should not be considered verbatim.)

TRANSCRIBED BY: MELISSA EICKEN

1 OFFICER GARNER: We are back on the record  
2 for hearings in case number 30869 through 30880. I'm  
3 David Garner, the hearing examiner for the hearings.  
4 We're at the hearing room of the Department of Mineral  
5 Resources, Oil & Gas Division, and it is 9:00 a.m.  
6 We'll resume where we left off, which I believe was  
7 Attorney Braaten is going to call his next witness.

8 MR. BRAATEN: We'll get them on the phone  
9 real quick here.

10 UNIDENTIFIED FEMALE: Hi, Chris. You  
11 ready? Okay. I'll put you on.

12 OFFICER GARNER: What's his name?

13 MR. BRAATEN: Well, we are calling Chris  
14 Stockness, appraiser with Shenehon Company.

15 OFFICER GARNER: Stockness is his last  
16 name?

17 MR. BRAATEN: Yes.

18 OFFICER GARNER: Mr. Stockness.

19 **THE WITNESS: Good morning.**

20 OFFICER GARNER: Do you solemnly swear or  
21 affirm under the penalties of perjury the testimony  
22 you're about to give in this matter be true and  
23 correct to the best of your knowledge and belief?

24 **THE WITNESS: I do.**

25 DIRECT EXAMINATION

1 BY MR. BRAATEN:

2 Q. Mr. Stockness, can you state your full name  
3 and spell your last name for us, please?

4 A. Yeah. Christopher John Stockness,  
5 S-T-O-C-K-N-E-S-S.

6 Q. And can you tell us by whom you're employed  
7 and your position?

8 A. Yeah. I'm employed at Shenehon Company  
9 where I am the managing director of real estate.

10 Q. Can you tell us just briefly what your  
11 educational background is?

12 A. Yeah. I attended the University of St.  
13 Thomas, and then obtained a degree in real estate, and  
14 I'm a certified general real property appraiser, been  
15 working in the valuation industry since 2002.

16 Q. And can you just provide some general  
17 background on your professional experience as an  
18 appraiser?

19 A. Yeah. As I mentioned, I've been in the  
20 valuation industry since 2002, but in college, I  
21 actually started at Shenehon Company, initially hired  
22 as a valuation analyst, and then currently the vice  
23 president, managing director of real estate Shenehon  
24 and Shenehon Company is a real estate and business  
25 valuation firm that's been in business since 1927.

1 We're based out of Minneapolis, and we routinely  
2 complete assignments throughout the upper Midwest.  
3 Over the past 20 years, I've been performing a  
4 multitude of commercial real estate valuations ranging  
5 from -- to all types of commercial real estate. In  
6 the course of my work, I'm routinely valuing different  
7 property rights, interest, including, you know, fee  
8 simple, lease fee, surface right, mineral right, air  
9 rights, and various easements. I do also hold a  
10 full-time license as a certified general real property  
11 appraiser in the State of North Dakota and have  
12 testified as an evaluation expert in the state.

13 Q. Thank you, Mr. Stockness. We have a -- an  
14 exhibit marked as LO-55. Do you have a copy of that  
15 in front of you?

16 A. Yes, I do.

17 Q. And can you tell us what that is?

18 A. That's a -- my curriculum vitae.

19 Q. And does the curriculum vitae accurately  
20 represent your professional work and experience?

21 A. Yes, it does.

22 MR. BRAATEN: Move to admit Exhibit 55.

23 OFFICER GARNER: Any objection?

24 MR. GLUDET: No objection.

25 OFFICER GARNER: The exhibit will be

1 admitted.

2 Q. (By Mr. Braaten:) Mr. Stockness, have you  
3 done any valuation projects or appraisal work that are  
4 similar or that you think would be helpful to  
5 assessing compensation for the matter that brings us  
6 here today?

7 A. Yeah. Well, as I mentioned, I have a  
8 license in North Dakota for -- for appraising real  
9 estate, and I work throughout, you know, central North  
10 Dakota throughout the Bakken formation, all across the  
11 state, really, appraising everything from easements  
12 for various pipelines, been involved in some oil  
13 production valuation, and surface rights including the  
14 impact of surface rights from energy production  
15 (inaudible) utilities, and routinely value  
16 agricultural land throughout the state as well as that  
17 our firm does get involved in doing a lot of mineral  
18 rights valuation. One time, in particular, we -- what  
19 we're currently working on is a underground natural  
20 gas storage assignment that we're working on in the --  
21 in Iowa, and in that particular instance, we are  
22 involved in appraising what the value -- what -- what  
23 a lease agreement should be for the rights to store  
24 natural gas underground.

25 Q. And with respect to the intervenor

1 landowners in this matter, and the time and work  
2 you've done, have you had time to put together a full  
3 appraisal for the valuation of pore space rights and  
4 the proceeding that brings us here today?

5           A.    No. And this is something when I initially  
6 was reached out about this potential assignment, we  
7 had discussed given the time frame having to provide a  
8 potential report as to the valuation testimony by, you  
9 know, today, or by -- you know, from this hearing and  
10 that was approximately 30 days ago, and I said, I  
11 really am not going to be able to complete any type of  
12 credible analysis. And, so what I agreed to do was  
13 just begin doing some consulting analysis where we  
14 could study some of the appraisal issues related to  
15 the pore space in Mercer and Oliver County.

16           Q.    And you mentioned a moment ago that your  
17 firm is working on a valuation and appraisal for pour  
18 space rights or for -- I shouldn't say -- you said you  
19 were working on a appraisal for a gas storage  
20 facility. How long has the firm been working on that  
21 project, approximately?

22           A.    Yeah. We were first engaged on that back  
23 last fall. And we are just still kind of in the early  
24 stages of what I call kind of the research and fact  
25 gathering taking place. And one of the things that's

1 particularly challenging with that assignment is  
2 finding the market data that you need to really  
3 understand, you know, the market, and then apply that  
4 to what is, you know, a fair market value on a storage  
5 agreement.

6 Q. And what would you say is the approximate  
7 time frame to complete an appraisal on a valuation  
8 project as technical and complicated as valuing  
9 property rights as needed for a underground storage  
10 facility?

11 A. Well, so just to give you kind of a rough  
12 estimate, I mean, we're going to be spending  
13 six months here, we're already at six months, probably  
14 a year, setting it. Now we're not exclusively setting  
15 just that, obviously. I have other assignments going  
16 on, but what we have to do is, really, reach out on  
17 kind of a national basis and see what kind of  
18 gather -- we can gather. And, so we've been working  
19 with that and try to find other expert, other  
20 stakeholders, people that have been involved in the  
21 transaction, and often times when you -- when you find  
22 some of these market transactions, it takes a while  
23 for you to verify all the information and really  
24 understand all of the physical attributes with that  
25 particular property and how the -- the compensation or

1 the -- the payments were determined in a given  
2 instance, and then, of course, you have to pool all  
3 the data together, study it, and you know, this isn't  
4 something where you can just find a few different data  
5 points, and then quickly reconcile what a value is.  
6 And, so you're looking, and you're trying to find  
7 current data, if you can, and also, you know,  
8 understand thoroughly as you can, verifying all the  
9 transaction came together, was there some threat of  
10 evidence of domain or was it truly an open market  
11 transaction. And, so that just takes time and a lot  
12 of digging to occur. And that kind of mirrors what  
13 I'm finding in this -- in this, over the last 30 days,  
14 as I started to get into it.

15 Q. And as -- as you started your -- as you  
16 started your work on this assignment, have you had an  
17 opportunity to review any transactions that you might  
18 end up using in an appraisal analysis?

19 A. Yeah. So far to date, we've had the -- the  
20 opportunity to go through about 10, what I would say,  
21 maybe 20 potential transactions that we are beginning  
22 to kind of study and analyze. And, so we're at kind  
23 of a good starting point. However, as we've got into  
24 these agreements, we're seeing a lot of variation.  
25 There's some market -- market seems to be merging.

1 However, there's still a fair amount of variation  
2 within them. You know, for example, looking at, you  
3 know, what is the appropriate payment on a per metric  
4 ton. You know, we're seeing current data, ranging  
5 from 25¢ per metric ton to 50¢ on the lower end, all  
6 the way up to a \$1.50 or more per metric ton on the  
7 upper end, and we're trying to really study to  
8 understand what are the reasoning behind that. Is  
9 there -- you know, what is the physical reasons in  
10 terms of how those rates are determined? Are they  
11 looking at the quality of the storage space or are  
12 they -- you know, the density or volume, metric  
13 ability you have of what you can store, and how does  
14 that affect the price? We're also trying to  
15 extrapolate from that, like, location of  
16 characteristics. So in the example of the pore space  
17 agreement in Mercer, Oliver County, clearly, you have  
18 kind of the infrastructure coming into play. And, so  
19 and a lot of ethanol plants in Iowa and the  
20 surrounding areas that you're going to be able to  
21 utilize the CO<sub>2</sub>. And, so how does that impact when  
22 we're comparing it to a lease that's down in Louisiana  
23 or Texas or, you know, somewhere in, like, Illinois,  
24 which I'm just citing some of the data points we've  
25 been looking at.

1 Q. And with respect to those agreements that  
2 you mentioned, that you've been reviewing, in the  
3 exhibits that we've marked, we marked Exhibit Numbers  
4 32 through 53 and excluding Exhibit 50 which is a  
5 study that's unrelated that was marked in the middle  
6 of those, but excluding Exhibit 50 are Exhibits 32  
7 through 53 copies of the agreements that you've agreed  
8 thus far as part of this assignment?

9 A. Yeah. That -- that especially is kind of  
10 the dataset that we've been working from at this  
11 point. And our goal to that would be to collect more  
12 of that data, and some of the -- I think the most  
13 recent is around 2022. And, so one of the things that  
14 I want to try to find is some more current data even  
15 through 2022 is relatively recent. We're dealing with  
16 an emerging market year. And, so as this market is  
17 merging and taking shape, it is very important to kind  
18 of study where are deals today. And, so one of the  
19 things within that dataset is, as I've said to myself  
20 and my team is, we've got to look at more current data  
21 to see where are things as of today, and there's also  
22 certainly some more stale data in terms of being  
23 several years or -- or multiple years as they occurred  
24 in the past and that has less relevance. And, so,  
25 yeah. Our goal would be to try to get maybe another

1 20 other deals, and then hopefully, we can start to  
2 really kind of understand and apply them back to a  
3 pore space evaluation we do in Mercer and Oliver  
4 County.

5 MR. BRAATEN: Move to admit Exhibits 32  
6 through 53 excluding Exhibit 50.

7 OFFICER GARNER: Any objection?

8 MR. GLUDET: I'll note our objection on  
9 relevance and foundation.

10 OFFICER GARNER: Objection is noted. The  
11 exhibits are admitted.

12 Q. (By Mr. Braaten:) I'm going to just  
13 briefly switch gears here, Mr. Stockness, but in -- in  
14 situations where maybe you don't have as a real robust  
15 dataset, are there other methodological approaches  
16 that you might take to conducting evaluation or  
17 appraisal of this nature?

18 A. Yeah. So what we -- what we're looking at  
19 here is, a market comparison benchmark. And, so we're  
20 looking at other market transactions of like kind  
21 deals, and the more we can understand those deals and  
22 understand the research and the more data we can have  
23 in terms of being able to really review it is  
24 certainly going to be helpful, but. In any evaluation  
25 like this, you -- and really, any real estate

1 evaluation, you're looking at all applicable valuation  
2 approaches, and here, you have kind of the market base  
3 approach, which I just discussed, and then the other  
4 approach that we really haven't even gotten into yet,  
5 but that we would certainly be taking a look at is  
6 the -- the income evaluation, and what that is, is  
7 looking at what is the fair rate of return back to the  
8 real estate. In this case, you know, pore space  
9 storage based on the anticipated kind of enterprise  
10 value of the -- of the larger business operations and  
11 try to figure out how do you determine a fair rate of  
12 return on the real estate for that use.

13 Q. And would it be an accurate  
14 characterization to say that when you're looking at  
15 the income based approach, ultimately, what you would  
16 be considering is the proportionate share of the net  
17 revenues that should be going to the landowner based  
18 on their property interest in the facility?

19 A. That is correct.

20 MR. BRAATEN: Okay. No further questions.

21 OFFICER GARNER: I'm sorry. I don't know  
22 your name.

23 MR. GLUDT: Mr. Examiner, my name is Ty  
24 Gludt. I'm with Fredrikson & Byron appearing today on  
25 behalf of the applicants.

1 OFFICER GARNER: Okay. I should have given  
2 you an opportunity to appear, I apologize.

3 MR. GLUDT: I think my appearance was noted  
4 by Mr. Bender at -- on the first day.

5 OFFICER GARNER: Okay. Great. Okay. You  
6 can proceed, Attorney Gludt.

7 MR. GLUDT: Thank you, Mr. Examiner.

8 CROSS EXAMINATION

9 BY MR. GLUDT:

10 Q. Good morning, Mr. Stockness.

11 A. **Good morning.**

12 Q. Just a couple of quick questions. Based on  
13 my understanding of your testimony, you are not able  
14 to provide an opinion on what fair market value or  
15 what pore space in Mercer, Oliver, and Morton County,  
16 North Dakota, is worth today; is that correct?

17 A. **That is correct.**

18 Q. Okay. In fact, you said you weren't able  
19 to provide a credible analysis at all today; is that  
20 correct?

21 A. **It is.**

22 Q. And are you aware that the commission who  
23 is reviewing these applications only has jurisdiction  
24 or a determination of equitable compensation for  
25 nonconsenting owners, and they have no jurisdiction

1 over the actual compensation paid to pore space  
2 owners?

3 **A. Yes. I understand what you're saying.**

4 MR. GLUDT: Okay. I have no further  
5 questions.

6 OFFICER GARNER: Any questions from staff?  
7 You can call your next witness or you have --

8 MR. BRAATEN: I just have one quick  
9 redirect for Mr. Stockness.

10 REDIRECT EXAMINATION

11 BY MR. BRAATEN:

12 Q. Mr. Stockness, are you ready, willing, and  
13 able to complete the work on this appraisal assignment  
14 given the time and data to do so?

15 **A. Yes. If we're able to get the appropriate**  
16 **time, we are ready to do it.**

17 MR. BRAATEN: No further questions.

18 OFFICER GARNER: Okay. Now you can call  
19 your next witness.

20 MR. BRAATEN: And Hearing Examiner, I  
21 apologize. I know we're just getting underway here,  
22 but we need to just get a couple things set up for the  
23 next witness, just to prepare. Could we take, like, a  
24 couple minutes?

25 OFFICER GARNER: Sure.

1 MR. BRAATEN: Okay. Thank you.

2 OFFICER GARNER: We'll go off the record.

3 Okay. We're back on the record.

4 Mr. Braaten, you can proceed.

5 MR. BRAATEN: Thank you, Your Honor. We  
6 call the Swenson Living Trust intervenor by and  
7 through its trustee Kurt Swenson.

8 OFFICER GARNER: Mr. Swenson, please raise  
9 your right hand. Do you solemnly swear or affirm  
10 under the penalties of perjury the testimony you're  
11 about to give in this matter will be truth and correct  
12 to the best of your knowledge and belief.

13 **THE WITNESS: I do.**

14 **DIRECT EXAMINATION**

15 BY MR. BRAATEN:

16 Q. Can you state your name and address,  
17 please?

18 A. Kurt Michael Swenson. 5774 21st Street  
19 Southwest, Beulah, North Dakota.

20 Q. And do you live there with anyone?

21 A. I live there with my wife, Fay.

22 Q. Okay. And can you give us some background  
23 on how -- just how this project affects you in a  
24 general way?

25 A. Sure. Yeah. We have lived where we live

1 since 2008. We moved back to North Dakota then where  
2 we wanted to have our kids grow up next to their  
3 grandma, Donna, and live on the family farm. We  
4 wanted to enjoy our extremely valuable peace and quiet  
5 that we have out there. Unfortunately, the last  
6 34 months has been anything but quiet in Oliver and  
7 Mercer Counties due to the applicant's actions.

8 Q. So what land do you own that is impacted by  
9 this project proposal?

10 A. We directly own or have an ownership  
11 interest in properties as a trustees for the Swenson  
12 Living Trust. It covers approximately 1,400 acres,  
13 and I believe there may be an exhibit that shows that.

14 Q. I'll pull up -- it's in the binders.  
15 Exhibit LO-81. All right. Can you tell us what we're  
16 looking at on Exhibit 81?

17 A. Yeah. Exhibit 81 is a -- a map showing the  
18 three disposal facility areas for the CO2. The  
19 colored boxes are shapes, are land that we have -- own  
20 or have ownership interest in, that is being affected  
21 by the proceedings or this hearing process. I can  
22 walk through the descriptions quickly of -- of what we  
23 have. We have the northwest quarter section, 22 tier  
24 one, 142 north, range 87 west. We nicknamed that one  
25 Thomases for the family that had lived there prior to

1 my wife's family acquiring it. We have the southeast  
2 quarter of Section 15, tier 142 north, range 87 west.  
3 That is Fay's Uncle Ralph's, World War II vet.  
4 Section 21, tier 142, north, range 87 west, all of  
5 that section, that includes the original homestead.  
6 That is where our house is. That is where my  
7 mother-in-law, Donna, lives. That is where Fay was  
8 raised. And where her family has lived for over  
9 110 years.

10 Since moving back, we have worked to  
11 acquire other properties. The other properties would  
12 include the west half of the northeast quarter of  
13 Section 14, tier 142 north, range 88 west. That was  
14 from the Shide (phonetic) family that we acquired  
15 that -- and that is inside the BK Fisher disposal  
16 facility. We had the opportunity to purchase and  
17 acquire land from former secretary of state Jim  
18 Kusler's estate. Jim was affected by the pore space  
19 options and lease agreements. As he was dying, he  
20 asked us to make sure that we worked to advocate for  
21 landowners. It's one of the reasons why I'm here  
22 today to make sure that there's actually fair  
23 treatment to landowners in this process.

24 So section -- the southwest quarter of  
25 section 9, tier 142 north, range 87 west, that's a

1 windmill quarter where we have Indian rings, and it is  
2 just the most beautiful mule deer country you can see.  
3 We also have out lot B, the east half of the northwest  
4 quarter section 7, tier 142 north, range 87 west.  
5 That's where Jim grew up. And my son now owns that  
6 house. That's on that property. And we have the  
7 southeast quarter, section 27, 143 range, 88. That  
8 was Jim's uncle, Ace, that owned that.

9               So in addition to those properties, we've  
10 recently signed a purchase agreement for more land  
11 interest in 14, 87, Section 20. We have options on  
12 another 480 acres in that area. All of that land is  
13 either inside one of the disposal facilities or in  
14 between the three disposal facilities that are  
15 proposed in this application being heard here today.

16           Q.    Have you had experience with renewable  
17 energy developers demanding the use of your land?

18           A.    I have. We have. You know, it seems like  
19 everybody wants what isn't theirs. They want our  
20 land. We've had relentless developers from wind  
21 industry wanting to put up their noisy light flickers,  
22 red lights flashing all night in our windows. The  
23 solar developers wanting to blanket our native grass  
24 prairies and crop fields with silicon derivatives, and  
25 now we have the CO2 developers wanting unrestrained

1 use, not only of our pore space that is one to  
2 two miles below the surface but of the surface lands  
3 itself. All of these examples used our taxpayer funds  
4 to develop our land for the green new deal agenda.  
5 The 30 by 30 land grab, all be it the latter is only  
6 developer, unfortunately, that's trying to force their  
7 private for profit out-of-state enterprise upon our  
8 private property without our consent.

9           Other developers, they seem to respect us,  
10 and if we say no, they get the hell off our property.  
11 It's not that we're against the applicant or this  
12 project. Excuse me. While I do disagree with the use  
13 of taxpayer funds to reward their unconstitutional  
14 taking of private property, we simply want to be  
15 treated as an equal party in a private treaty that is  
16 negotiated between a willing seller and a willing  
17 buyer. The constitutional law in Century CODE 3822  
18 that allows the applicant to take our private property  
19 without our consent making us a subservient party in a  
20 private treaty negotiation when the applicant holds  
21 the trump card of the heavy hand of government  
22 disguised as amalgamation. This private property  
23 taken does not allow our constitutionally guaranteed  
24 judicial hearing or a trial by a jury of our peers to  
25 determine just compensation if we can't arrive at that

1 private treaty.

2 Q. Have you had an opportunity to express any  
3 of your current concerns to the applicant?

4 A. We have. Yes. We were initially contacted  
5 in August of 2021. I got a notification on a Ring  
6 doorbell on my phone, saw the video, didn't quite  
7 recognize them, but recognized as our -- one of our  
8 neighbors, Jason Ericson. He indicated that -- that  
9 he'd like to talk, that we were going to be receiving  
10 a letter the next day. This is on a Sunday afternoon  
11 when I was running to put that corn planter away. And  
12 that they wanted to talk about a lease, and I said,  
13 well, I'm heading into town, but you -- I'm driving a  
14 tractor. You'll have to catch me, so he caught me.  
15 And he explained what was coming in this letter. We  
16 received the letter the next day or two. Upon  
17 reviewing the letter, we invited Jeff Skaare, the  
18 applicant's counsel, to our farm and ranch along with  
19 several of our neighbors to learn more about the  
20 project -- their project, and to our knowledge, this  
21 turned out to be the applicant's first landowner  
22 meeting. This is before any community or landowner  
23 outreach had taken place, and at this meeting at our  
24 farm and ranch with our neighbors we were provided the  
25 first hot off the press version of the lease that was

1 applicant's offer to place an option on our land to  
2 lease the pore space for their CO2 disposal allowing  
3 them the full use and access of our surface.

4           As I stated, it takes a willing seller and  
5 a willing buyer to reach an agreement. Unless, in  
6 this case, the heavy hand of government can be used to  
7 take it from one and give to another. Our family  
8 wasn't a willing seller that day when the applicant  
9 approached us. But we did give them the courtesy of  
10 hosting with open arms their first landowner meeting  
11 at our farm and ranch. You see we are in favor of  
12 development. We recognize that our state relies on  
13 industry to provide jobs and develop the resources  
14 that we have.

15           Q. Do you have -- I'm sorry.

16           A. Well --

17           Q. Go ahead.

18           A. I just wanted -- on that, I just wanted to  
19 say we're not against the project. We've never been  
20 against the project, but we simply don't agree with  
21 the terms and conditions. And that's still the case  
22 today as I sit here.

23           Q. And do you have any experience yourself  
24 with the energy industry or ethanol industry or with  
25 CO2 capture and sequestration?

1           A.     I do.

2           Q.     Can you tell us about that?

3           A.     Sure. After completing, I went to NDSU and  
4 completed my engineering degree in 1991. In fact,  
5 probably crossed paths with Wade when he was there  
6 playing football. I went to work at an oil refinery  
7 in Minnesota. I was there for 12 years, filled 11  
8 roles while I was at that refinery. Much of my time  
9 was spent in the maintenance and operations of certain  
10 process units, one of which was a carbon dioxide  
11 production unit. We produced high purity CO2 for  
12 multiple markets, sold it. In my final role at my  
13 time at the refinery, I was responsible for the total  
14 health, safety, environmental performance, and  
15 operational reliability of these process units. At  
16 that refinery I learned the characteristics and  
17 hazards of CO2. And while there are many hazards, the  
18 primary one applicable to the applicant's permit that  
19 deals with human health is the simple fact that CO2's  
20 heavier than air. And it can displace life-sustaining  
21 oxygen. In high enough concentrations, it can  
22 displace enough oxygen that it will deprive the body  
23 and the brain the oxygen needed to live. I left the  
24 refinery in 2003. We moved our young family to South  
25 Dakota to join a start-up ethanol business. While we

1 were in South Dakota, I had the opportunity to be a  
2 plant manager at the world's largest dry corn ethanol  
3 plant that was under construction. As we grew the  
4 business, I was promoted to vice president of  
5 operations. I was over a -- eventually 16 ethanol  
6 plants across the country, and we became the world's  
7 largest ethanol producer. Several of those plants  
8 that I had in my fleet at that time are now intending  
9 to send the CO2 into the proposed pipeline that the  
10 applicant has to North Dakota and bury it under our  
11 farm and ranch. And isn't that ironic?

12           While in the ethanol industry, my  
13 responsibilities included safe environmental,  
14 responsible, and compliant efficient operations. I  
15 had corporate wide responsibilities for the safety and  
16 health systems for over 1,500 people including  
17 employees and contractors. I oversaw complex safety  
18 systems. While safety systems included detailed  
19 process safety management analysis of risk, injury,  
20 and incident analysis, I had a detailed understanding  
21 of our feedstocks, our chemicals, and our products  
22 which included CO2. Carbon dioxide is a major product  
23 of the fermentation of -- as yeast convert the various  
24 sugars in the ethanol production process to alcohol,  
25 not unlike the distilled moonshine with approximately

1 a third of kernel of corn becomes CO2 by mass, and  
2 then the ethanol plants, traditionally, for the most  
3 part, release that CO2 to the atmosphere after  
4 scrubbing the pollutants, and then that CO2 was  
5 available to be consumed the next year by the corn to  
6 start that cycle all over again. In a year's time, we  
7 would produce over 5 million tons of CO2. In my  
8 tenure, we had to solve many safety risks. It was an  
9 emerging industry. One of the specific risks was  
10 leaking pressure safety vacuum and relief valves on  
11 the fermentation processes as an example. Our  
12 employees would need to physically be near or inside a  
13 cloud of carbon dioxide to perform maintenance work at  
14 times. Obviously, this required a lot of detailed  
15 planning, risk assessment, special purpose, personnel  
16 protective equipment, and significant oversight. CO2  
17 is nothing to mess around with. I've had to oversee  
18 incident analysis of employees who are overcome by CO2  
19 and the vapors that displaced the life sustaining  
20 oxygen that they needed to breathe.

21 I'm professionally qualified through  
22 training and experience to understand the actual  
23 hazards of carbon dioxide. Carbon dioxide is nothing  
24 to be casual about. It is not the same as crude oil.  
25 It is not the same as natural gas, refined petroleum

1 products or other things that the regional media  
2 pundits around here would have you believe. Its  
3 unique properties make it uniquely hazardous. CO2 can  
4 be extremely dangerous, and permitting these disposal  
5 facilities should be done with the utmost respect for  
6 the specific hazards that CO2 brings and the specific  
7 design of the injection facilities at each of the  
8 injection sites. The specific topography, potential  
9 release point heights, the process data, weather  
10 conditions for each of the disposal facilities will  
11 need to be considered.

12           So my other roles in my career have exposed  
13 me to detailed process plant design, process hazardous  
14 analysis, level of protection analysis, safe design  
15 methodologies which always consider requirements for  
16 safety systems to be incorporated into facility design  
17 training, and operating procedures. We would also  
18 review the system for likely leak points such as pump  
19 seals, flanges, and worst case scenario breaches. A  
20 dispersion analysis may have been conducted depending  
21 on what the serial was, and based on a specific set of  
22 process, environmental, and topography -- topographic  
23 and weather conditions, we would get a wide range of  
24 results that we would evaluate on how those gases  
25 dispersed. And how far out the concentrations that

1 were dangerous to our employees or the public. In  
2 many cases of those processes, gases may be realized  
3 at varying receptor points. Depending on the  
4 chemicals that were being released, these receptors  
5 could have been initial sources, public roads or  
6 rights-of-way, neighboring homes or other culturally  
7 or fauna important locations.

8 Q. So outside of the experience that you just  
9 discussed regarding your education as well as the  
10 industrial processes and facilities management and the  
11 work with the hazardous chemicals, can you tell us if  
12 there's any other experience you have that you bring  
13 to bear upon your work related to this project and the  
14 protection of your property?

15 A. Sure. Yes. In addition to my 30 plus  
16 years regarding process hazards, specifically some of  
17 that with carbon dioxide, I've also had 30 years of  
18 training and experience in contract negotiations,  
19 contract legal review, contract risk management  
20 strategies, including detailed insurance coverage  
21 analysis. Along with my practical contract  
22 experience, I've negotiated over hundreds of  
23 contracts. I've also had legal training from Cornell  
24 University on how to create effective contracts, how  
25 to interpret an effective contract, how to manage risk

1 in contracts, and enforce those contract terms.

2 Q. So you mentioned that you received some  
3 contract documents from the applicant at one point.  
4 What did you do with those contract documents after  
5 you received them?

6 A. So after we received those documents, they  
7 were the hot off the press version of the applicant's  
8 option and lease agreements. We reviewed them, of  
9 course. We shared them with Fay's family who, in many  
10 cases, owns interest in the land that we do and  
11 collectively after seeing the one-sided nature that  
12 in -- was in favor of the applicant with very little  
13 protections for the landowner, I decided we should  
14 have it reviewed by attorneys. We consulted with  
15 multiple attorneys. Every one of them, three, in  
16 fact, specifically recommended do not sign. Didn't  
17 get anybody to tell us to sign that document. So then  
18 it was decided that, you know what? We are in favor  
19 of the industry progressing in North Dakota. So what  
20 can we do as a family to help this move forward?

21 So we attempted or decided to attempt to  
22 negotiate a contract that would give equal protections  
23 to landowners as much as it would allow the developer  
24 to do what they needed to do. You see a good contract  
25 results when you get what you need, but not everything

1 you want; yet, you find it acceptable to sign.  
2 Initially, we reviewed -- or I should say we initially  
3 reviewed our feedback with the applicant on a virtual  
4 meeting during COVID, and we did that fairly quickly  
5 after receiving it and only to be met in the closing  
6 of that meeting with a statement by Mr. Boeshans of,  
7 thank you for your criticisms of our agreement. Well,  
8 we didn't think they were criticisms. We were  
9 thinking we were expressing what we felt we needed to  
10 enter into a mutual agreement. Thereafter, we formed  
11 a group of landowners in the area that was being  
12 targeted by the applicant. We had a common goal of  
13 arriving at a contract that could be used as a model  
14 contract for the Mason North Dakota CO2 disposal  
15 industry. And after, seriously, hundreds of hours of  
16 landowner input and attorney input, which they don't  
17 give us for free, sorry, Derrick, we invested in that  
18 red line of the applicant's initial agreement, and we  
19 provided that to the applicant on January 25th, 2022  
20 which was a landowner version of the lease documents  
21 that we asked for their consideration of.

22 Q. All right. We're going to mark an exhibit  
23 here, but before I do that, a quick question,  
24 Mr. Swenson, did you have -- and I don't want you to  
25 talk about communications with attorneys, but did you

1 hire legal counsel as well when you were developing a  
2 response to those contract terms?

3 **A. We did.**

4 Q. And was I one of those attorneys?

5 **A. You were.**

6 Q. And was there another attorney that was  
7 also involved in helping with that effort?

8 **A. Charles Carvell.**

9 MR. BRAATEN: Okay. All right. We are  
10 marking Landowner Exhibit 87. Do you want to hand me  
11 those? I'll start. Thank you.

12 And Your Honor, I once again was remiss,  
13 but while we're paused here, I had discussed a map  
14 prior as Exhibit LO-81, and I failed to move to admit,  
15 so I move to admit Exhibit 81.

16 MR. GLUDET: No objection.

17 OFFICER GARNER: The exhibit is admitted.

18 Q. (By Mr. Braaten:) And Mr. Swenson, we've  
19 now handed out Exhibit LO-87. Can you -- is this a  
20 copy of some of the red lines that were generated to  
21 respond to the offer from the applicant?

22 **A. Yes, it is.**

23 MR. BRAATEN: Move to admit Exhibit 87.

24 OFFICER GARNER: Any objection?

25 MR. GLUDET: No objection.

1 OFFICER GARNER: The exhibit is admitted.

2 Q. (By Mr. Braaten:) Mr. Swenson, can you  
3 tell us about what happened when you sent your  
4 counteroffer with your edits and suggestions back to  
5 the applicant? What happened next?

6 A. Yes. So we sent it to the applicant.  
7 Initially, as I normally do, we asked for just more of  
8 a, you know, kind of business to business meeting. So  
9 I asked to have meetings with Mr. Boeshans. I invited  
10 him into my office, conference room, and we had  
11 several meetings with him, ultimately, to try to help  
12 explain what we had changed from the original  
13 document, why we had changed it, and to get a sense of  
14 what they might accept, specifically or maybe in  
15 concept, and what they would not accept. Some of the  
16 meetings were one-on-one. Some we had counsel  
17 present. I can tell you all of them we got  
18 significant amount of lip service from the applicant's  
19 attorney. We took this process very seriously on the  
20 landowner side expecting to get a red line version of  
21 the lease back from the applicant that would actually  
22 give us specific feedback to what they would take or  
23 what they would not take. I can swear as of today,  
24 we've waited 870 days since submitting the landowner  
25 lease versions, and we're still waiting for a contract

1 red line to be returned. And if they have one here  
2 today, I'd be glad to accept it and review it.

3 Through this process of learning about the  
4 CO2 disposal technology and regulations and legal  
5 theories behind this and dedicating hundreds of hours  
6 each year, I routinely field calls from my landowners  
7 across the country who have similar issues due to the  
8 lack of state regulations that provide protections for  
9 the landowner. I felt it was necessarily to get  
10 involved in the bigger picture of CO2 disposal. As a  
11 result, I have right here in this room met with  
12 Mr. Helms in his role as North Dakota's oil and gas  
13 and Department of Resources where he informed me that  
14 I was being faced with the state's perceived lease  
15 powers over our property. I was informed by  
16 Mr. Helms, and he acknowledged a lack of landowner  
17 protections in administrative code including safe  
18 setback distances from public receptors. I met with  
19 the industry leadership in ag, coal, and gas  
20 industries in all of the representative organizations  
21 to learn their views on this new disposal industry  
22 coming to North Dakota. We also had numerous  
23 landowner meetings in Oliver and Mercer Counties along  
24 with meetings in Hebron and Glen Ullin. I presented  
25 at the Northwest Landowner's Association annual

1 meeting, provided multiple presentations to state and  
2 county level North Dakota Farm Bureau meetings. My  
3 expertise and assistance on the topic were requested  
4 by a group of landowners between New Salem and Glen  
5 Ullin and Morton County was illegally trying to push a  
6 special use permit through for another CO2 developer  
7 which included a director capture facility.

8 I've written letters to the editor,  
9 co-authored articles for publication and have been  
10 interviewed on various TV programs, radio shows. I've  
11 advocated for legislative changes in the most recent  
12 2023 session. Unfortunately, learning that most of  
13 our reg -- or legislators, they're under the spell of  
14 Mr. Helms, and the industry proponents have forgotten  
15 about the citizens whom they represent that are  
16 adversely affected by unconstitutional elements in our  
17 current century code. All of this effort has been  
18 done with a genuine overarching goal advocating for  
19 regulatory change while educating landowners on this  
20 emerging CO2 disposal industry in order to protect,  
21 not just my land and Fay's land but all landowners.  
22 Hopefully, this had resulted in some improvements for  
23 the landowners' ability to negotiate with these  
24 well-funded developers that resulted for them contract  
25 language that they felt was fair to both parties.

1 Q. So with all of that experience, did you  
2 also then engage with the applicant on negotiation or  
3 attempt to work on the suggestions for the contract  
4 documents with them?

5 A. Yes. I did -- I previously stated that we  
6 did -- you know, taken hundreds of landowner attorney  
7 hours in that red line to conform their agreement to  
8 something that we felt while I believe any North  
9 Dakota landowner would consider signing unless they  
10 were simply opposed to the applicant to their project.  
11 Much of the reclamation and restoration clauses were  
12 spearheaded by Mike Koept (phonetic) who was a former  
13 Department of Trust lands employee and generally is  
14 based on North Dakota Trust Land documents. If you  
15 look at our red line, what you're going to see is,  
16 it's mostly red or purple in the one that was handed  
17 out. So their contract was so poor that it really  
18 should have been flushed down the toilet and started  
19 new, but to aid in our discussions with the applicant,  
20 we narrowed the list down to some major topics.

21 Q. And what were the primary points of concern  
22 or those topics that you just referenced?

23 A. It really started out for us with what are  
24 you putting -- wanting to put under our property?  
25 What is it? The original versions of the lease were

1 very loose on the definitions. It could have been  
2 50 percent carbon dioxide, 50 percent hydrogen  
3 sulfide, because it allowed incidental substances or  
4 other substances. So we added a definition, a simple  
5 one. We put a percentage in of what the purity of the  
6 CO2 should be so that we knew based on our knowledge  
7 what the hazards would be of what they were putting  
8 under our property. We focused on, what are you  
9 actually leasing? Because the lease was, we want to  
10 lease everything under your surface and more, and  
11 we'll get to that. You know, this -- this conference  
12 room probably talks more than any other conference  
13 room in the world about different subsurface stratum,  
14 different share plays, different levels within the  
15 share plays, such as a Three Forks or the Madison or  
16 the Bakken or whatever there are, and the applicant  
17 wanted everything. And we thought, you know, it's  
18 really only fair, and it's pretty standard in the oil  
19 and gas that, you know, you should just tell us  
20 exactly what you want, and you know, we'll agree to  
21 that. But no, they wanted everything, so we said, no,  
22 you're going to give us a single geological formation,  
23 and if that works out for you and you want to lease  
24 something else, like an oil and gas lease, you can  
25 give us a new lease for that. And, so that's what we

1 did. They also had these warranties reps, guarantees,  
2 things like that. Well, if you're not familiar with  
3 contract language, you may not know the importance of  
4 those, but those are very important in a contract  
5 to -- if you're signing for that.

6 Q. Can I pause you real quick, Mr. Swenson,  
7 though, and ask, so a title warranty clause was  
8 contained in Summit's contract, which they agreed  
9 yesterday they need to remove, but they weren't  
10 willing to remove that for you during the negotiation?

11 A. I think it was on Tuesday, Derrick, that  
12 they agreed to remove it, but yeah. They wouldn't  
13 remove it.

14 Q. Okay. What are the other topics that you  
15 had attempted to address with them that they wouldn't?

16 A. Well, the -- in the option, it included  
17 geophysical expiration activities. So as you know,  
18 that involves seismograph trucks and maybe some  
19 expiration in other ways. My mother-in-law, Donna,  
20 had, had a water well that her cattle relied on  
21 damaged by in -- earlier, all be it a little older  
22 technology seismograph process, that came through and  
23 that private property water well never produced water  
24 again for her cattle. And she was never compensated  
25 for that, so we asked for some setbacks in excess of

1 what the state rules that they were claiming applied  
2 to this gave us. And we felt that, that was fair to  
3 make sure that she was comfortable. We asked that in  
4 case you damage our water springs that provide  
5 life-sustaining water for the cattle or you damage our  
6 wells, you're going to do some testing, you're going  
7 to test the quality, and the quantity of our water  
8 wherever, whatever sources there are that we use and  
9 rely on before you do it, and you're going to do it  
10 afterwards, and you're going to be accountable. They  
11 asked us to indemnify them, and if you're not familiar  
12 with indemnifications, but it means that we will  
13 defend them and protect them and hold them harmless  
14 for actions. Well, we thought it was only fair that  
15 they defend us. And protect us and hold us harmless  
16 as well. So we asked for that.

17 What was interesting to me, and you know,  
18 Mike helped, especially, was the lease gave the  
19 applicant unrestricted full use of our surface,  
20 unrestricted full access to our surface lands, and  
21 they could put anything they wanted, wherever they  
22 wanted on our land. If you signed the document that  
23 they put in front of us, and many of our neighbors  
24 did, unfortunately. So because of that, Mike's  
25 experience said, you know what? We're not necessarily

1 opposed to things being on our land at that point if  
2 we can have some control, but we'd at least like  
3 restoration requirements in your -- in your documents  
4 so that we know that if you're forcing something on to  
5 our land that we know that our land is going to be  
6 restored and reclaimed after you leave. So we added  
7 those and that makes up a large part of those document  
8 red lines.

9                   One of the concerns that we had was that  
10 this was a newer company, unproven in North Dakota.  
11 We didn't know them before my Ring doorbell went off  
12 that day in August of 2021. So we had no idea what  
13 their funding was. Are they going to follow through  
14 on their commitments? And, so we asked for bonds. We  
15 asked for, if you're going to bring people on to our  
16 land and have them do geophysical explorations survey  
17 activities, build a compression station outside of my  
18 bedroom window or whatever it is that you're doing, I  
19 want to make sure that you pay them, so they don't put  
20 a lien on my property. They didn't have that  
21 requirement. And, so we added that, that you would  
22 have a payment bond to pay your suppliers and your  
23 service providers. In addition, we asked for bonds  
24 for restoration. Because as we've seen exhibited in  
25 this room in hearings, the state doesn't stand for

1 landowner rights. The state stands for industry, and  
2 they don't make them reclaim wells and plug or -- the  
3 abandoned wells where companies have gone broke and  
4 left because they don't have a proper bonding program,  
5 so we asked for a bond. If you're going to put shit  
6 on our land, you're going to take it off our land,  
7 eventually, and there's going to be a financial  
8 instrument that ensures we have that covered if you go  
9 broke or when you sell and flip your company to some  
10 foreign country.

11 I was flabbergasted that they wanted to  
12 come on to our land in the option phase without  
13 insurance. The option had no insurance requirements  
14 for them to drive a major truck on our land, put a  
15 bunch of stuff on our surface, have people that we  
16 have no idea if they have employers' liability  
17 insurance or general liability insurance or pollution  
18 insurance for the antifreeze that leaked all over the  
19 state trust land that we rent. So we added insurance  
20 requirements. We added a significant amount of  
21 language that if they wanted to put something on our  
22 property again, evidenced by the fact that we put it  
23 into the document that if they wanted to put something  
24 on our property, we were going to have some control,  
25 but they were going to have -- we were going to know

1 ahead of time what that form of easement was. There  
2 was no form of easement included that we would  
3 understand what the terms and conditions would be to  
4 evaluate with their absolute right to put whatever  
5 they want, wherever they want on our land, so we added  
6 an easement structure. Because they wanted to use our  
7 surface, as I mentioned in my opening statement, we  
8 have very valuable, very valuable peace and quiet on  
9 our farm and ranch. I was greeted by antelope last  
10 night when I left here. Driving into our farm, I was  
11 greeted by mule deer and pheasants, and when I got out  
12 of my diesel truck, shut it off, so I could hear, you  
13 know what I heard? I heard doves cooing, I heard the  
14 pheasants cooing and greeting me when I came home.  
15 When I woke up this morning, I had two buck mule deer,  
16 one eating off the apple tree in our backyard and one  
17 eating off a Crataegus tree, having browls {sic} for  
18 their breakfast. Because of that, we wanted to have  
19 some restrictions on what they could do on our lands  
20 and where, so we defined some simple requirements that  
21 we would have to give some form of consent, and we  
22 wouldn't necessarily unreasonably withhold that, but  
23 you know what? You don't get to have lights shining  
24 in our bedroom window with your pump station. We  
25 don't want that. I like to see the stars. I like to

1 see the Northern Lights out on our north-facing  
2 bedroom. I like to see the Milky Way when I'm in my  
3 hot tub sitting on our south patio. I don't want your  
4 lights shining in me. I've already had hundreds of  
5 those damn red lights flashing to the south of us from  
6 those wind developers. I was also very concerned  
7 about noise. I'm sure you're all familiar with  
8 William Stone and William County lawsuit going on  
9 right now with the data center. I don't want to  
10 listen to a compressor station or pumping station  
11 injecting CO2 when I'm sipping my coffee on my deck in  
12 the mornings. I don't need that. I don't have it  
13 today. And I don't want it in the future, so we added  
14 some noise requirements.

15 In addition, we asked, because you're going  
16 to be paying us based on your injected tons of carbon  
17 dioxide and other substances, we want the right to  
18 audit your books. That's a standard clause when  
19 you're being compensated based on their records. We  
20 want to be able to audit it. And as I'm sure they'll  
21 tell you, we asked for some financial changes in the  
22 structure of the lease document, which you have in  
23 front of you. We felt our land and the use of our  
24 land was worth more than they were offering. We had  
25 started to do research and develop data points on what

1 our land was worth at that time or our pore space and  
2 the use of our surface. In fact, we developed a  
3 schedule of consideration, a schedule of consideration  
4 that would say, if you're going ahead of time, we will  
5 know what you're going to pay us, if you put a  
6 pipeline on our -- on our land. We're not going to  
7 sign this agreement like you're asking us to do, and  
8 then negotiate when you have the absolute right to put  
9 it on. We're going to negotiate the price of this up  
10 front. I'm not going to sign a contract, and then be  
11 held hostage by you. So we added a consideration of  
12 values for per rod of pipeline based on its size, per  
13 linear foot of communication cabling or devices, per  
14 communication towers, and all other surface facilities  
15 that at least we could imagine such as roads and --  
16 and surface acres set aside for pumping stations and  
17 things like that. So we included that as well.

18 And you know, we really -- we didn't know  
19 what to think initially when we saw the 25¢ royalty  
20 based on their lease agreement, their option, and  
21 lease agreement for the injected tons, and where I  
22 went is, I said, how much -- how much is this project  
23 going to make for you? And how -- what are your  
24 economics, and what are your costs? And I sat in  
25 numerous presentations that ultimately happened and

1 Mr. Boeshans presented even one time at the Oliver  
2 County -- it was either -- I think it was a  
3 commission -- commission meeting and shared their  
4 economics of what the uplift of the ethanol plants and  
5 the revenue sharing agreements would bring them. 29  
6 to 30¢ a gallon was what would be split between the  
7 developer and the applicant here. Or the ethanol  
8 plant and the applicant.

9                   We saw that -- you know, we obviously  
10 understood the 45-Q tax credits, and we researched  
11 significantly California or the west coast low carbon  
12 fuel standard credit market, which I'm sure many of  
13 you know has tanked significantly since the time that  
14 this started. And in all of that, you know, we really  
15 felt that you're leasing a resource of ours. You're  
16 leasing pore space that's ours to develop, not unlike  
17 an oil and gas in some manners, and we felt, well, why  
18 don't you pay us a royalty, then, based off your  
19 profits and that net profits such as an oil and gas  
20 lease, so we proposed a three-sixteenth royalty on net  
21 profit.

22                   So those were the major lease changes.  
23 Obviously, there's a lot of knits and mats in there as  
24 well, as you'll see as you walk through that document.  
25 I previously mentioned that I have not received a

1 formal return red line as a -- as is customary in  
2 contract negotiations. Waiting on today 870 days, and  
3 I'm still counting.

4 I would acknowledge that the applicant has  
5 made some changes in their agreements with landowners  
6 based on our feedback, and I'm glad for that. I'm  
7 glad that landowners have been made improvements from  
8 that first lease version that should have been just  
9 ripped up, burned, flushed down the toilet, taken up  
10 to the burning barrel at Donna's and just never saw it  
11 again.

12 Q. So the -- the red lines that were sent  
13 back, you indicated that both myself and Charles  
14 Carvell had worked on them, in addition to you and  
15 Mike Koept. Are you aware of who the attorney was on  
16 the task force that helped draft the Class 6  
17 regulations for North Dakota?

18 A. I am.

19 Q. And who is that?

20 A. Charles Carvell.

21 Q. Okay. Are you familiar with the policy  
22 statements and law related to carbon sequestration in  
23 North Dakota?

24 A. I almost have them memorized.

25 Q. And you're fairly familiar with the project

1 at this point obviously?

2 **A. Yes.**

3 Q. And so I want to talk about --

4 OFFICER GARNER: Attorney Braaten --  
5 Attorney Braaten, let's just take a 10-minute break  
6 right now.

7 MR. BRAATEN: Okay. Sounds great.

8 (Silence in audio.)

9 OFFICER GARNER: We are back on the record.  
10 Attorney Braaten, you can continue.

11 MR. BRAATEN: Thank you, Your Honor.

12 Q. (By Mr. Braaten:) Mr. Swenson, I was  
13 asking about the policy statements and the Class 6  
14 statute and just to direct your attention at the --  
15 the policy statement in 3822 notes, it is in the  
16 public interest to promote the geological storage of  
17 carbon dioxide, doing so will benefit the state and  
18 the global environment by reducing greenhouse gas  
19 emissions, doing so will help ensure the viability of  
20 the state's coal and power industries to the economic  
21 benefit of North Dakota and its citizens. Further,  
22 geologic storage of carbon dioxide, a potentially  
23 valuable commodity, may allow for its ready  
24 availability, if needed, for commercial, industrial or  
25 other uses, including enhanced recovery of oil, gas,

1 and other minerals. Do you feel the applicant would  
2 accomplish any of these policy goals with the project  
3 proposed for your land?

4 A. I do not.

5 Q. And why not?

6 A. Well, the first one is the whole kind of  
7 public interest piece. It's a pretty simple one.  
8 Their projects or their permits requested fail on that  
9 merit of that policy statement. You know, the  
10 legislator puts that in the policy to give cover to  
11 their unconstitutional practices of taking our private  
12 property without constitutionally mandated due  
13 process. The applicant has not just demonstrated with  
14 evidence on the record that their project meets the  
15 threshold of being in the public interest. They have  
16 told publicly that it will create jobs, and I'm sure  
17 it will. It will have economic benefits, economic  
18 health will improve because of it, and I agree, and  
19 they will have increased tax revenues on -- because of  
20 their project for the state and local jurisdictions.  
21 Unfortunately, these are all constitutionally barred  
22 by North Dakota's Constitution when you consider a  
23 physical taking of our private property. The only  
24 constitutionally allowed physical taking by a private  
25 company for a public interest is through a regulated

1 public utility or a common carrier. They're neither.  
2 They're not a regulated public utility in the disposal  
3 facility, and they're not a common carrier in the  
4 disposal facility. They stated their pipeline intends  
5 to be regulated as a common carrier, and this has no  
6 bearing on the pore space. Common carrier regulations  
7 are under the purview of the Public Service  
8 Commission, not the Industrial Commission. The PSC  
9 regulated pipeline ends at a terminus red dot that we  
10 discussed in this hearing, miles away, from the  
11 disposal facility. And those regulations cannot be  
12 applied under the Industrial Commission authorities.  
13 Additionally, the applicant has set up a maze of  
14 various LLCs and such. They're just a separate  
15 company from the pipeline.

16 Q. What about the other policy statements?

17 A. Well, let's talk about the environment that  
18 we're going to benefit the global environment by  
19 reducing greenhouse gas emissions. I can  
20 affirmatively state that the applicant has provided no  
21 data or evidence or proof on the record in these  
22 hearings that the project will meet this policy  
23 statement. Mr. Boeshans even testified that it will  
24 not change global temperature. Further, as a direct  
25 result of the applicant's request for amalgamation

1 which results in a physical, per se, taking of our  
2 private property, this goes in direct conflict with  
3 common law. That was handed down in 1976 in the North  
4 Dakota Supreme Court case Skjonsby versus Elkin and  
5 that opinion confirmed that in a physical taking, the  
6 applicant must meet the threshold of a substantial and  
7 a direct benefit to the public. Well, the public is a  
8 North Dakota citizen. There's clearly no substantial  
9 and direct global environmental benefit provided to  
10 North Dakota citizens, by the applicant's proposed  
11 energy intensive capture transport and disposal of  
12 carbon dioxide as they testified to. To meet this  
13 policy objective, the applicant should be required to  
14 demonstrate by the Industrial Commission to submit a  
15 complete carbon dioxide mass balance. The mass  
16 balance should include not only the carbon dioxide  
17 produced by the energy they use to capture, clean,  
18 transport, and dispose of the CO2, but all of their  
19 other operations produced by their employee vehicles  
20 use to work, office heating and cooling, the steel  
21 manufacturing for their pipelines, the transport, the  
22 compressors, the buildings. All of the manufactured  
23 items that go into it should be included in that CO2  
24 mass balance, if you want to prove and find that it's  
25 in the public interest on this policy statement.

1                   In addition, they really ought to include  
2 all the hot air they expel and the CO2 with that, too.

3           Q.     What about the -- the state's coal and  
4 power industries and economic benefits in that regard?

5           A.     Well, I don't see them tied into a coal  
6 power plant with a pipeline. Or a power -- any power  
7 plant for that matter. Coal or otherwise. They --  
8 they publicly claim that the carbon dioxide will be  
9 disposing of 57 ethanol plants in our area and  
10 surrounding our farm and ranch, 56 of which are from  
11 out of state. In fact, if you were here, and you may  
12 have heard recent statements by Jason Bohrer, the head  
13 of the Lignite Energy Council that, you know, that is  
14 North Dakota's leading coal and power industry  
15 representative group, affirm they have no association  
16 with this project. So I don't see how it's  
17 benefitting them.

18           Q.     And based on both your -- your experience  
19 as well as your negotiations with Summit, do you have  
20 an understanding as to whether they will have a ready  
21 availability, if needed, for commercial, industrial or  
22 other uses with respect to the CO2 they're putting  
23 down?

24           A.     So I can rely only on what I have heard  
25 from others or have researched. I can tell you that

1 John Harju of the EERC and other employees -- Wes Pack  
2 is a good example. Wes's daughter went to college  
3 with my -- was one of my son's best friends in  
4 college, that it's not economically feasible to  
5 recover this carbon dioxide from these geological  
6 disposal facilities. And Mr. Harju even states  
7 specifically that there has been very little work done  
8 I'm trying to recover CO2 from injected masses.

9 Q. And did Mr. Harju state that at some point  
10 in any kind of public forum (inaudible)?

11 A. Sorry. Yes. He did.

12 Q. And in what forum did he make that  
13 statement?

14 A. It was in a presentation to the joint -- I  
15 lost the video here or -- thing. It was in a  
16 presentation to the joint Senate and House, Energy and  
17 Natural Resources Committee. We're having technical  
18 difficulties here. There you go. I'll play it here.

19 UNIDENTIFIED MALE: Is there any effort  
20 being made towards recoverable storage?

21 JOHN HARJU: Sure. So to -- to -- there's  
22 really been a -- a representative joint members of the  
23 committee. There's been very little work done on  
24 trying to recover CO2 from injected masses, so. In  
25 essence, when injecting into something like our Broom

1 Creek Formation, you're injecting into an already  
2 water-saturated zone. And, so our expectation would  
3 be very, very little ability to recover that CO2.

4 THE WITNESS: So I have to rely on others,  
5 and I would view that in that presentation that  
6 Mr. Harju is an expert on that, and that I don't think  
7 that it will be available for enhanced oil recovery.  
8 And they're not going to pump it out of my land once  
9 they put it in. It'll be there forever. You know,  
10 even if it were economically feasible for them to do  
11 that, the applicant would end up having to refund a  
12 portion of their 45-Q tax credits. They'd lose their  
13 revenue sharing along with their customer of any low  
14 carbon fuel centered credit price uplift they obtained  
15 because -- well, the ethanol producers for the ethanol  
16 producers, that LCF credit requires permanence, as  
17 Mr. Boeshans testified to in this hearing, and it  
18 seemed like in my opinion that the applicant's  
19 statement or lack of evidence on this record for this  
20 hearing do not meet that public interest threshold.

21 Q. As someone who pays state and federal  
22 taxes, what's your opinion on the use of your taxpayer  
23 funds to promote and fund the applicant's project?

24 A. So I think we've affirmed that the weight  
25 of the evidence in this hearing shows that the project

1 is not meeting North Dakota's policy objectives, so  
2 why are they pursuing this project? The simple answer  
3 is, to take part in any massive wealth transfer  
4 scheme, taking taxpayer dollars or maybe we should say  
5 debt of our grandchildren for those of you who may  
6 have grandchildren someday, and putting it in their  
7 out-of-state silk-lined pockets, all through North  
8 Dakota's complicit regulations that the applicant has  
9 not met the burden of proof for their projects to be  
10 approved.

11 So in addition to these 45-Q tax credits  
12 that are provided to the applicant's investors or  
13 finance SEERs at the reported project capacity of 18  
14 billion metric tons per year which has been raised,  
15 obviously, since initially we met with them puts  
16 1.5 billion in their foreign, silk-lined pockets of  
17 our money and future federal debt obligations. North  
18 Dakota, unfortunately, is, you know, they're  
19 contributing a bunch of dollars to this as well. You  
20 may have heard about the recent \$300,000 grant awarded  
21 for a carbon dioxide re-education campaign putting  
22 more tax money into the silk-lined pockets of local  
23 media pundits, and engineering companies that suck it  
24 to teat of our government. Our taxpayers' monies  
25 would have been better spent putting up billboards

1 stating North Dakota's open for CO2 disposal. Don't  
2 worry. Our citizens are too stupid to understand it.  
3 At least that would have provided jobs. Changing the  
4 billboards out would have people employed, with that  
5 new signage going up. They would have put fuel in  
6 their trucks and their equipment. Bought some candy  
7 at the gas station. Driving our economy and probably  
8 would have had the signs made in North Dakota creating  
9 jobs. I'd like that one a lot better.

10 In addition to the deployment of  
11 state-funded EERC program, supporting the development  
12 of this applicant's application, the legislator  
13 provides a payment in lieu of taxes to the counties  
14 for more taxpayer dollars, so the applicant doesn't  
15 have to pay property taxes for 10 years on their  
16 pipeline infrastructure. You can catch the governor  
17 flying down to Iowa to meet with Rastetter or whoever  
18 he did. The EERC employees driving to Beulah for the  
19 public information meetings and so on and so on. It  
20 sickens me that we have bought into this green new  
21 deal agenda in North Dakota, and we're now funding it  
22 with our taxpayer dollars. I'm sick of it. You  
23 should be ashamed.

24 Q. Will you allow your land to be amalgamated  
25 by the Industrial Commission?

1           A.    I can tell you right now the state can try  
2 and take it. You're going to end up taking for my  
3 cold dead hands. And you're going to see how that  
4 works out for you. The state knows good and well that  
5 the amalgamation provision in Century Code does not  
6 meet the requirements of North Dakota's Constitution.  
7 North Dakota private property owners are afforded the  
8 due process method of imminent domain in our  
9 constitution when the government allows the physical  
10 taking. The state knows that amalgamation is a  
11 physical taking, not a regulatory taking as they  
12 sometimes say by allowing CO2 physically invade our  
13 private property of pore space. The state knows in  
14 the lawsuit they lost at the North Dakota Supreme  
15 Court against the appellant, Northwest Landowners  
16 Association. These injection of fluids into pore  
17 space is a physical taking. It's not a regulatory  
18 taking. They lost. The Court -- the five justices of  
19 the Supreme Court of North Dakota affirmed that. The  
20 state knows that in the U.S. Supreme Court decision in  
21 Cedar Point that even a temporary physical invasion of  
22 private property is a physical taking. That's not a  
23 regulatory taking. The state knows that by allowing  
24 physical property such as pressure to migrate outside  
25 of CO2's disposal facility is the same as a physical

1 taking, and even that pressure, it might dissipate  
2 over centuries. I don't know. They couldn't tell us  
3 yesterday in testimony that the current and future  
4 landowners' ability to use their pore space is damaged  
5 as testified here by the applicant. The state knows  
6 they're not requiring the applicant -- the applicant  
7 to provide any compensation for this transfer of  
8 pressure or CO2 outside the bounds of the disposal  
9 facility leading to a taking without any compensation.  
10 The state is trying with a lot of effort while looking  
11 like a great contortionist to convince a judge that  
12 while the pore space is private property of the  
13 surface owner, it doesn't deserve the same protection  
14 as surface lands, and their police powers get to rule  
15 the day for pore space. Yet, despite all this great  
16 knowledge held to the state on these issues, I believe  
17 that their arrogance in the application of  
18 unconstitutional law is resulting in the closest thing  
19 I've seen in my lifetime to a tyrannical government.  
20 It's high time they're checked on this by the citizens  
21 with all of our God-given constitutional rights.

22 Q. Do you believe that equitable compensation  
23 that has been defined by Mr. Helms in the Industrial  
24 Commission is acceptable?

25 A. Honestly, I don't know how they've defined

1 it but absolutely not. I'll disagree, I'm sure, with  
2 based on what I've seen in the past. You know, it's  
3 common knowledge that when the state does a physical  
4 taking of private property, we, as a property owner,  
5 are granted certain due process in the form of an  
6 imminent domain hearing in front of a judge with the  
7 state or their proxy. They have to substantiate that  
8 it is in the public interest, and there's a necessity  
9 for the taking, and if agreed to by the judge, well,  
10 that property owner is granted an option, if they want  
11 a jury trial to determine just compensation. That's  
12 mandated by the constitution.

13               Here in this sham of due process, we are  
14 not being given an impartial judicial hearing as I  
15 mentioned earlier. The oil and gas division is  
16 charged with both a regulatory and a promotional  
17 nature of their efforts. How can this possibly be  
18 impartial when they're charged with industry  
19 promotion? A judge is impartial, as they are not tied  
20 to industry results. The property owner is, once  
21 again, in a subservient position to the applicant in  
22 determination of what should be just compensation.  
23 Ha. But it gets even better because the  
24 unconstitutional law states that the commission  
25 doesn't even have to meet the constitutional bar of

1 that just compensation, that a jury of my peers would  
2 determine. They simply determine what's equitable.  
3 Unfortunately, for that property owner, there is no  
4 definition in statute of what equitable means, and  
5 it's up to interpretation of this room. And clearly,  
6 we have heard testimony from the applicant that  
7 landowners are not being equitably compensated.  
8 They're not.

9 In fact, in an open records request from  
10 February 14th of 2023, the state has put on record  
11 that they do not have any records that would be used  
12 to determine how non compensating landowners are or  
13 will be equitably compensated as required by statute  
14 for the Minnkota Power Project Tundra and Retro Energy  
15 Carbon Sequestration Projects under 38220814. If the  
16 state has a burden of proof to determine that  
17 nonconsenting pore space owners are or will be  
18 equitably compensated as a requirement of this Century  
19 Code, wouldn't you think they have records of how they  
20 did that, how did you determine, and how did they meet  
21 that statutory requirement?

22 Q. We're going to hand out Exhibit LO-88.

23 A. Thank you.

24 Q. Mr. Swenson, we've handed out Exhibit  
25 LO-88. Can you walk us through what we are looking at

1 in this exhibit?

2           A. I can. The first page of the exhibit is a  
3 letter written by Mike Koept, February 9th, 2023, to  
4 the public information officer requesting to inspect  
5 or obtain copies of public records which is an open  
6 records request of how nonconsenting pore space owners  
7 are or will be equitably compensated for the Minnkota  
8 Power Project Tundra and Retro Energy Carbon  
9 Sequestration Projects under 38220814. So that's the  
10 first page. Now, the second page is internal to the  
11 DMR sent to a group that we're not sure who the actual  
12 recipients are. Please see below the open records  
13 request. If there are any questions, let me know.  
14 And the action requested was if less than one hour of  
15 time, please place documents here, and they gave a --  
16 an internal file share description of where to put  
17 them. If more than that time, please let me know of  
18 an estimate by the end of day Monday, February 13th.  
19 The third page is the response that Mr. Koept got  
20 which is actually dated February 14th, 2023, so a  
21 prompt response. Thank you for that. It says, the  
22 records -- box is checked. The records you requested  
23 cannot be provided because there's no such records  
24 exist. Huh. Or the records are not records of this  
25 agency. And then it was typed in there, all

1 negotiations for compensation were private  
2 conversations with pore space owners. So how did you  
3 figure that one out? How did you figure that the  
4 landowners would be equitably compensated if you have  
5 no records?

6 MR. BRAATEN: Move to admit Exhibit 88.

7 OFFICER GARNER: Objections?

8 MR. GLUDT: No objection.

9 OFFICER GARNER: Exhibit is admitted.

10 Q. (By Mr. Braaten:) So Mr. Swenson, do you  
11 have concerns about how the compensation is being  
12 determined in these proceedings by the commission, if  
13 it is?

14 A. Huh. I do. You know, as it relates to  
15 this hearing, and again, just to be on the record  
16 again, we have been severely prejudiced by the state's  
17 lack of enforcement of North Dakota Rules of Civil  
18 Procedure that are required in a hearing of this  
19 matter. We have been denied the opportunity to  
20 dispose or depose -- I'm not going to dispose of you  
21 Jeff; okay? To depose or receive any discovery in  
22 this matter. None. Not one thing. Not one  
23 deposition. Not one piece of discovery. Given to us.  
24 Zero. That's zilch, nada. Setting aside this lack of  
25 due process by the state, the real matter is here,

1 what is equitable? Since the state doesn't define it,  
2 and it's not a constitutional term, I don't know what  
3 it means. Who really knows.

4 Now, Mr. Helms will tell you that equitable  
5 and just compensation are pretty much the same thing.  
6 Just as he did on February -- or Friday, January 13th,  
7 2023, in a presentation to a joint meeting of the  
8 North Dakota House and Senate, Energy & Natural  
9 Resources Committee. Mr. Helms states, if there is  
10 just or equitable compensation, it's not a taking.  
11 And in the absence of it, of that it is. You know  
12 that's wrong. Of course, it's still a taking. Just  
13 because somebody gets compensation, it's still a  
14 taking.

15 Q. Can you play that video from Mr. Helms for  
16 us making that statement?

17 A. I'll find it here. Yep.

18 LYNN HELMS: My conclusion and my  
19 attorney's conclusion is that if there is just or  
20 equitable compensation, it is not a taking. In the  
21 absence of that, it is. But if there is just or  
22 equitable compensation, it is not a taking. That  
23 would --

24 Q. (By Mr. Braaten:) What's your response to  
25 that, Mr. Swenson?

1           A.    Huh. Just compensation is required by and  
2 only granted in a taking. Mr. Helms knows this.  
3 That's a lie, what he did or a misleading statement or  
4 you're just as incompetent as the director of this  
5 agency. I'm not sure which it is. Furthermore, you  
6 admit that you don't know what the value is. Just  
7 that everybody gets paid the same. How can you  
8 possibly not consider pore space value under this  
9 pretend undefined by statute made-up term of equitable  
10 compensation that you state that you have no records  
11 of in this agency on how you evaluate if equitable  
12 compensation is being paid?

13           Q.    Well, how do you feel about the  
14 compensation being offered by the applicant and  
15 proposed by the applicant?

16           A.    In an agreement, there's usually an  
17 exchange of compensation. The compensation normally  
18 gets determined by mutual negotiation. In this case  
19 of the applicant, there was zero negotiation on  
20 compensation. One that Mr. Boeshans testified to was  
21 originally set on a value of freaking coal leases of  
22 all things. And then nothing to do with the actual  
23 value of my pore space. Their approach has been, take  
24 it or leave it. But we'll take your pore space  
25 through this freakin amalgamation clause if you don't

1 take our offer.

2 OFFICER GARNER: Okay. I'm going to ask  
3 you to refrain from swearing, please.

4 THE WITNESS: You left the rules of civil  
5 procedure when you swindled our --

6 OFFICER GARNER: I'm just asking you not to  
7 use the word freakin.

8 Q. (By Mr. Braaten:) Okay. What was the  
9 amount that the applicant was offering in that initial  
10 agreement?

11 A. 25¢ per ton disposed of under our native  
12 grass prairies, and then when the Inflation Reduction  
13 Act was passed by the federal government giving them  
14 more of our federal tax dollars and federal debt for  
15 our grandchildren to pay, they gave us an extra 25¢,  
16 making it 50¢ per metric ton for the landowner, a  
17 whopping 0.7 percent of their increase of \$35 that  
18 they got for no additional cost on their part. Is  
19 that equitable? Or just? I don't think so.

20 In a meeting with the applicant's North  
21 Dakota leadership team, it was stated by Mr. Boeshans,  
22 well, he didn't have any market data that showed that  
23 they should pay more. While market data may be  
24 difficult to obtain or ascertain in this nascent  
25 industry, we did provide them examples. We had found

1 them. I'm not sure why they couldn't. On leases that  
2 were paying on different terms. All higher than the  
3 applicant.

4 So we received no counteroffer to our red  
5 line of their agreement in which we had proposed  
6 paying the landowner similar to how this agency  
7 normally sees things paid on a royalty model based on  
8 a share of net profits to which Mr. Boeshans turned  
9 this method untenable. It was untenable. I guess he  
10 won't have a career in oil and gas. But there are  
11 lease examples available.

12 Q. Can you --

13 A. Oh, go ahead.

14 Q. Well, I was just going to ask you, if you  
15 can give us a couple of examples of the available  
16 transactions you just mentioned.

17 A. Dakota Gasification Company. Just north of  
18 Beulah is offering a 1.70 per metric ton, 3.4 times  
19 higher than the applicant.

20 Q. Can I have you take a look at Exhibit  
21 LO-53? Sorry that's in the binder, everyone. All  
22 right. Looking at Exhibit 53, this has been  
23 previously marked. Is that the lease you reference  
24 with respect to the Dakota Gasification --

25 A. It is.

1 Q. Okay. And other than the Dakota  
2 Gasification at the \$1.70 per metric ton 3.4 times  
3 higher than the applicant's, any other agreements that  
4 you think are more appropriate compensation?

5 A. Publicly available, the State of Louisiana  
6 entered into an agreement with Air Products Blue  
7 Energy, LLC, which shows royalty payments of 1.50 a  
8 ton. While the 45-Q was at \$50 per metric ton. But  
9 it also included an escalation clause because they  
10 thought that value might go up, that the partner or  
11 their -- their other party on that agreement might  
12 receive, and in that case that escalation clause  
13 included a 9 percent escalator of any increases above  
14 50 -- \$50. That 9 percent versus Summit's measly  
15 0.7 percent that they offered us, for no extra cost to  
16 them. So when the \$50 per metric ton 45-Q payment  
17 went to \$85, presumably, with that 9 percent  
18 escalator, that increased payment would be \$4.65 per  
19 metric ton. 9.3 times higher than the applicant's  
20 offer.

21 Q. And is that agreement that you were just  
22 referencing contained in the record at Exhibit LO-45?

23 A. It is.

24 Q. Any other agreements you think are more  
25 appropriate context for considering the compensation

1 here?

2           A.     The Permanent School Fund of the State of  
3 Texas entered into a transportation and storage lease  
4 in April 2022, with Bayou Bend CCS, LLC. This lease  
5 was structured much more like what we had been  
6 proposing as landowners in this case. They took it as  
7 a form of a percentage of facility proceeds which  
8 ranged between 3 and 6 percent versus our net profit,  
9 three-sixteenths offer that we provided them. In  
10 their case, facility proceeds were to find and include  
11 any consideration paid or delivered to the lessee,  
12 meaning the person that's injecting, including the  
13 value of the carbon credits on a cash paid basis or  
14 after tax valuation, very similar to what we had  
15 proposed just that they had a lower number on gross,  
16 and we had a bigger number on net.

17           Q.     And is the lease you were just talking  
18 about in referencing Exhibit LO-43 in the record?

19           A.     It is.

20           Q.     And, so what are these -- these three  
21 agreements tell you about the compensation?

22           A.     Well, I am -- I am disheartened that this  
23 hearing is considering forcing our private property  
24 into a lease that is undervalued by financial --

25                   MR. GLUDDT: Mr. Examiner -- Mr. Examiner,

1 I'm going to make an objection at this point on  
2 relevance. We're discussing compensation and leases  
3 that have nothing to do with this project and over  
4 which the commission has no jurisdiction. Second,  
5 this is all being done to lay a -- making a  
6 constitutional argument before this commission over  
7 which they have no jurisdiction.

8 OFFICER GARNER: The objection is noted.  
9 I'm going to allow him to continue.

10 THE WITNESS: I'll restate that. Why  
11 should we, as landowners, be subjected to a lease that  
12 is undervalued by national standards? Simply because  
13 that's what the applicant offered without any  
14 negotiation on their part. Do we not have the right  
15 to advocate for the best financial result for the use  
16 of our private property? I sure think we do. But not  
17 here. Not in the North Dakota apparently. Somehow  
18 that law got -- you know, that right got lost.

19 So they've demonstrated through the  
20 evidence of this hearing that they are not certain how  
21 far this CO2 even extends under the lines they drew on  
22 the map that show an arbitrary concentration cutoff  
23 level of 5 percent carbon dioxide in the aquifer.  
24 Ugh. They admitted on the record that carbon dioxide  
25 will extend beyond this line, and they're not able to

1 attest on the record to how far carbon dioxide will  
2 extend beyond that arbitrary 5 percent line. They've  
3 admitted that it will go out there, and eventually may  
4 invade neighboring properties that may or may not be  
5 leased, but in neither case, they're not going to  
6 compensate them. So how can the state possibly know  
7 if the pore space owners are being compensated  
8 equitably by statute when they don't know how far the  
9 CO2 will actually extend onto neighboring properties  
10 at which pore space owners actually should receive  
11 compensation for disposal of their CO2 in their pore  
12 space? But there is no plan or commitment by the  
13 applicant to pay them as testified to yesterday by  
14 Mr. Boeshans. How can this oil and gas division let  
15 us, as landowners, even evaluate the accuracy, the  
16 sensitivities or the completeness of the applicant's  
17 application when they didn't even ask for or receive  
18 the seismograph data as was testified to yesterday?  
19 Nor did we.

20 Q. (By Mr. Braaten:) And do you have property  
21 that is not located within the areas of review but is  
22 still being impacted by this proposed project?

23 A. We do.

24 Q. And can you explain that?

25 A. So the state is playing fast and loose with

1 their inconsistent application of intervenor rights by  
2 stating in your order, Mr. Garner, to our trust that  
3 the commission will not consider the trust position,  
4 insofar, as it fails or it falls outside the  
5 consideration of Summit Carbon storage number two.  
6 Much of our land was intentionally skipped over by the  
7 applicant surrounding these lands of ours with  
8 injection wells due to the applicant's simultaneous  
9 injection plans in these six wells. Their models  
10 predict that much of our property, as we saw on the  
11 record, will see an increase in pressure gradient of 8  
12 to 900 pounds over the ambient conditions of today  
13 after their 20 years of injection rendering our pore  
14 space unable to realize the same net present value  
15 cash flow for any commercial use that we engage in and  
16 possibly risking our ability to modify -- monetize the  
17 45-Q tax credits as was testified to by the applicant  
18 as our rates of injection will be reduced to the  
19 applicant's pressured by the applicant's trespass of  
20 their pressure onto our property ultimately reducing  
21 the volume of CO2 we could inject in limited 12 years  
22 for the 45-Q tax credits.

23 Q. Can we have everyone look at Exhibit LO-63?  
24 And Mr. Swenson, can you explain to us on this map  
25 that this illustrates in any way what you're

1 discussing now? Yeah.

2           A.    As you'll see, these are the three disposal  
3 facility areas proposed by the applicant. The upper  
4 left one being the BK Fisher well. The green border  
5 around that well is the current boundary being  
6 proposed for the disposal facility. The orange  
7 surrounding that is the area of review. The right  
8 well is a JK Hence well, again, surrounded by a green  
9 line for the border of their proposed disposal  
10 facility, and then the, what, orange -- I'm not sure  
11 what color that is -- around that is the area of  
12 review, and then the bottom center well is a TB line  
13 gang well. The blue line is the proposed border by  
14 the applicant of the storage disposal facility, and  
15 the purple is the surrounding area of review. You'll  
16 see all of the intervenor lands marked on there in  
17 colored blocks. You'll see the white ones which are  
18 specific to our trust fall in between a lot of the  
19 storage disposal facility boundaries and areas of  
20 review even, but the boundaries are what's important.  
21 And overlaid on this map is the pressure gradient that  
22 the EERC, through the applicant, has provided of what  
23 the pressures will be after 20 years of injection by  
24 those three wells at their planned rates, and what  
25 you'll see is, much of our land will have pressure

1 trespass in our pore space rendering it unable to  
2 realize what we could realize today for a net cash  
3 flow, but yet, we're not being paid, but our pore  
4 space is being damaged.

5 MR. BRAATEN: Move to admit Exhibit 63.

6 OFFICER GARNER: Any objection?

7 MR. GLUDT: Yes. Mr. Examiner, foundation.  
8 We don't know who produced this map, how it was  
9 produced. If the witness's able to give us a little  
10 bit more foundation in those respects, we may be able  
11 to remove our objection.

12 OFFICER GARNER: Mr. Braaten.

13 Q. (By Mr. Braaten:) Do you have an  
14 understanding of the program in which this map was  
15 created, Mr. Swenson?

16 A. The Google Earth program?

17 Q. Correct.

18 A. I do.

19 Q. Is it your understanding that the images of  
20 the pressure maps produced by the applicant as well as  
21 the boundaries produced by the applicant are on this  
22 map alongside of the properties that are owned by the  
23 other intervenors?

24 A. Yes, it is.

25 Q. And all of those images are then compiled

1 on to a KMZ file within Google Earth that then  
2 produces the map that we're looking at in Exhibit 63?

3 **A. It does.**

4 MR. BRAATEN: Move to admit.

5 OFFICER GARNER: Do you have any objection?

6 MR. GLUDT: No objection.

7 OFFICER GARNER: The exhibit will be  
8 admitted.

9 Q. (By Mr. Braaten:) I'm going to take a look  
10 now at Exhibit 86.

11 **A. Is that one --**

12 Q. And this is the one that we e-mailed around  
13 to everyone, and I gave a flash drive to Judge Garner  
14 and to Mr. Bender. Mr. Swenson, can you tell us what  
15 we're looking at on Exhibit 86?

16 **A. This map is a -- well, I'll call it a**  
17 **snippet, but a copy taken from Minnkota Power's -- I**  
18 **guess their process of -- the documents that they**  
19 **submitted, and then were ultimately replied on and**  
20 **stuff in their petition to intervene in this hearing.**  
21 **I added myself the red line and the letterings or**  
22 **words that are called Swenson Trust Land and Minnkota**  
23 **Power well.**

24 Q. And what was your intent with creating this  
25 map, and what were you trying to illustrate here?

1           A.     So as I previously mentioned, we were  
2 denied our petition to intervene on lands that we  
3 didn't have an interest in, and for some reason, for  
4 the same reason, of that potential increased pressure  
5 on their case of only 2 to 300, but in our case 8 to  
6 900 in their leased pore space. Minnkota was granted  
7 their petition to intervene in all three of these  
8 disposal facilities of the applicant. But yet, we  
9 only get one. And we're affected by them way more  
10 than they are. How is this remotely fair? Once  
11 again, in the example of the state favoring the  
12 industry over the citizen.

13           MR. BRAATEN: Move to admit Exhibit 86.

14           MR. GLUDT: No objection.

15           OFFICER GARNER: The exhibit is admitted.

16           THE WITNESS: You know, one can only --  
17 sorry. I can only get one conclusion from this, I  
18 believe, that the state is either trying to lay down  
19 some evidence in this action by evaluating correlative  
20 rights to prop up their unsubstantiated defense in an  
21 ongoing lawsuit with the Northwest Landowners  
22 Association or they're just simply prejudicing us in  
23 this hearing. Prejudicing us in this hearing with  
24 more lack of due process in this hearing by denying  
25 our ability to intervene on damaging our private

1 property due to the pressurization of pore space while  
2 allowing Minnkota to intervene, which is it?  
3 Unfortunately, as a state has refused to enforce North  
4 Dakota's Rules of Civil Procedure. We, as a  
5 petitioner, have not been given our discovery  
6 requests. We have not been able to depose anybody  
7 that would have allowed us to substantiate or refute  
8 the above-claimed pressure gradient data by the  
9 applicant and impact by the applicant's uncompensated  
10 use of our pore space. As well we have heard even  
11 more testimony by the applicant's experts, well,  
12 they're intentionally, influenced model perimeters  
13 resulting in smaller projected CO2 plume results,  
14 resulting in a avoidance of signing up landowners, and  
15 keeping the money in their pockets.

16 Q. (By Mr. Braaten:) Did you review the  
17 storage agreement that is part of the application?

18 A. I did.

19 Q. And do you understand that you're going to  
20 be subject to the terms of that agreement in whether  
21 you've ever signed a contract with the applicant or  
22 not?

23 A. That's what it says, yes.

24 Q. Do you have any concerns with that or with  
25 the pore space lease -- pore space lease attached to

1 it that is purportedly going to be imposed upon you?

2 A. Well, as you've heard or seen, I should  
3 say, in testimony at this hearing, the resulting  
4 material changes agreed to by the applicant in the  
5 agreement that they committed to in this room this  
6 week, you're darn right I have concerns. We've been  
7 asking for some of that for 31 months. Yet, the only  
8 way to get them to change the insurance provision of  
9 all silly things, something they have, they just  
10 didn't want to give us was to publicly shame them in  
11 this room, in this hearing. What is up with that? Is  
12 that good faith negotiations? I don't know.

13 The applicant's project does not meet the  
14 threshold for public interest as it pertains to a  
15 physical invasion resulting in a physical taking of  
16 our land. They have failed to provide any evidence of  
17 the mass balance of greenhouse gas emissions reduced  
18 by their project, if any. And substantiate that the  
19 direct and substantial impact to North Dakota citizens  
20 are required by law for a physical taking. The  
21 applicant has not provided testimony of a direct  
22 impact on coal and power industries. The applicant  
23 has publicly stated that they will not be using the  
24 requested disposal facilities for enhanced oil  
25 recovery or other beneficial uses. They don't meet

1 the policy recitals, and because of that, the storage  
2 agreement and these permit requests should be denied,  
3 specifically in the unleased pore space interest 3.1  
4 section, any pore space owner in the storage facility  
5 who owns a pore space interest in the storage  
6 reservoir that is not leased for the purpose of this  
7 agreement, and during the term here of shall be  
8 treated as if it were subject to the pore space lease  
9 attached to, hereto, as Exhibit D.

10 So I am a pore space owner, along with my  
11 wife, Fay. We own interest in one of the storage  
12 disposal facilities, and it's not leased for the  
13 purposes of this agreement. What gives the state the  
14 right to make me an indentured servant to them?  
15 Subjecting me to a private agreement that I don't  
16 agree to.

17 Mr. Helms, are you the king, and I'm the  
18 subject now? Once again, in your statements to the  
19 legislator on Friday, January 13th, 2023, you stated,  
20 our future orders are going to be a little bit  
21 different. We're not going to incorporate the storage  
22 facility agreement.

23 LYNN HELMS: Use of the service. Now,  
24 we've learned through the asking of that question that  
25 our future orders are going to be a little bit

1 different. We're not just going to incorporate the  
2 storage facility agreement that, you know, was  
3 privately worked out with the ratification people in  
4 total in there. We're going to address some of those  
5 issues. We're all --

6 **THE WITNESS: Sure (inaudible) to be**  
7 **included in this current storage agreement by my**  
8 **reading.**

9 Q. (By Mr. Braaten:) Do you have an  
10 understanding of whether you are going to have the  
11 same or a different lease as the North Dakota  
12 Department of Trust Lands?

13 A. My understanding is that a -- the North  
14 Dakota Trust Lands has not signed an agreement to date  
15 with the applicant, but I do know that the lease  
16 version under consideration today is not the one in  
17 the storage agreement. So do we not have equal  
18 protection under the law? Or is it the whole, rule  
19 for thee, but not for me. Typical of the king. Why  
20 does the state get a different lease agreement than I  
21 do?

22 So we've heard over the years starting in  
23 this room that they're simply trying to regulate our  
24 private property, but here, they give the applicant  
25 the right to use as much of our land without requiring

1 an easement that I've signed without constitutional  
2 due process and without that imminent domain hearing,  
3 jury trial. This is a blatant physical taking of our  
4 private property unconstitutional. They're not  
5 setbacks. There's not safety considerations, noise,  
6 light restoration, reclamation or other written into  
7 the agreement.

8 Yet, Mr. Helms, you told us that we would  
9 have that.

10 Well, Derrick, I might have lost it again.  
11 There we go. That's what's doing it; huh? All right.  
12 There we go.

13 LYNN HELMS: So very robust regulatory  
14 paradigm that you created, but it treats people  
15 fairly, it respects them, it runs things through  
16 multiple hearings. Man, have I learned a lot, so.  
17 You know, one of the questions that's been asked is,  
18 do these Industrial Commission orders actually allow  
19 use of the surface? Putting a pipe or a pump or -- or  
20 something like that on the surface, and yes, they do.  
21 The statute allows for reasonable and necessary use of  
22 the surface. Now, we've learned through the asking of  
23 that question that our future orders are going to be a  
24 little bit different. We're not just going to  
25 incorporate the storage facility agreement that, you

1 know, was privately worked out with the ratification  
2 people in total. In there, we're going to address  
3 some of those issues. We're also planning a rule  
4 change to make sure people understand that there are  
5 going to be setbacks that -- that you've got to keep  
6 this infrastructure that's on the surface away from  
7 people's homes and their businesses and roads and  
8 streets and streams and things like that, so. So  
9 there will be some rule changes. Am I looking forward  
10 to that? Guess what? Those rule changes have to go  
11 through EPA and be published in the federal register.  
12 How long will that take? I don't know. But if we're  
13 going to do this job right, we have to do it right.  
14 So that's our regulation paradigm.

15 **THE WITNESS:** So I'd asked, are we being  
16 treated fairly? I'd say the obvious lack of due  
17 process would say no. Favoring Minnkota over  
18 landowners is another egregious example of unfairness.  
19 Are we being respected? Well, I'd say no. The lack  
20 of reciprocal negotiations would say no. When are the  
21 other hearings scheduled that were mentioned? I only  
22 know of one. What are -- what statute references  
23 reasonable and necessary use of our surface? Where  
24 are these rule changes that Mr. Helms references?  
25 It's been 17 months since this legislative

1 presentation telling the legislators, so they wouldn't  
2 vote favorably on our senate bill we had in process.  
3 What progress has been made to establish setbacks to  
4 keep these things away from our homes, our roads, and  
5 streams as mentioned in the video. You seem to put a  
6 lot of things in these storage agreements that aren't  
7 required by law. You certainly could put setbacks in  
8 it. I've reviewed the legislative history on 3822.  
9 That was a lot of fun. It's clear that the legislator  
10 did not intend in any legislative testimony or hearing  
11 to make us as non-compensated landowners subject to a  
12 private agreement we didn't sign. They just wanted us  
13 to get paid for use of our pore space in an equal  
14 manner. That's -- that's it.

15           They also never intended the commission to  
16 require us to give up our surface lands. As the  
17 Century Code specifically limits the authority to pore  
18 space as stated in Century Code 382210, amalgamating  
19 property interest. If a storage operator does not  
20 obtain the consent of all persons who own the storage  
21 reservoirs pore space, the commission may require that  
22 the pore space owned by nonconsenting owners be  
23 included in the storage facility and subject to  
24 geologic storage. I don't see anything in there about  
25 surface lands. Not a thing. I don't see anything

1 about our surface lands in that on which Fay's mom had  
2 to learn to do all the farming and ranching by  
3 herself, and those activities after Fay's dad died  
4 while she was in high school, that same surface land  
5 provided wheat, oats, hay, and beef that were  
6 monetized to pay for Fay to go to college where I met  
7 the love of my life. Those surface lands were where  
8 my sons shot their first deer, their first pheasants,  
9 and their first grouse. The same surface lands that  
10 we host youth and veterans hunts every year on for our  
11 community. Those surface lands that the high school  
12 classes came out. Just this last month at 5:00 in the  
13 morning to sit in the cold and watch the sharp tail  
14 grouse dance on their lek within feet of their eyes,  
15 an experience they will remember for the rest of their  
16 lives. The surface lands on which we almost lost one  
17 of our boys, in a winter blizzard, as he ran out to an  
18 open prairie field disoriented from the hellacious  
19 winds and blinding snow not able to see his mom  
20 standing in the garage door waiting for him. And it's  
21 the same surface lands that I buried two of my best  
22 friends on. I don't -- I did not hear anything about  
23 giving up access or use of our surface lands in that  
24 legislative directive. And it's not just the surface  
25 lands. You're affecting real people with your

1 decisions from this hearing. Do you even know their  
2 names? Fay Beth Swenson, Joseph Oliver Swenson,  
3 Olivia Wazwek (phonetic), Warren Wayne Swenson,  
4 Courtney Geizer (phonetic), Donna May Smith, July Dawn  
5 Silvernagle (phonetic), Dean Silvernagle, Craig  
6 Bolinski (phonetic), Amanda Bolinski, Camden Bolinski,  
7 Mack Bolinski, Megan Summers-Butler, Jeff Butler,  
8 Lauren Summers-Gilmer, Chad Gilmer, Tammy Summers,  
9 Michael Boman (phonetic), Glen Gerving (phonetic),  
10 Lisa Gerving, Michael Hought, Bonnie Hought, Johnny  
11 Yocumb (phonetic), Kevin Craft, Kimberly Craft,  
12 Sharmaine Lee Belt, Charlotte Lee Belt, Kirk Mays,  
13 Linda Mays, Allen Mays, Paul Metz, Christy Metz, Gary  
14 Smith, Cassie Smith, and I can keep going all day if  
15 you'd like. But how many of them do you know, and do  
16 you know that your decisions will irreparably impact  
17 their land from your decisions from the sham of a  
18 hearing?

19 MR. BRAATEN: Can we take a break, Your  
20 Honor?

21 OFFICER GARNER: Yeah. We can take a  
22 five-minute break. We'll go off the record.

23 We are back on the record. Attorney  
24 Braaten, you can proceed.

25 MR. BRAATEN: Thank you, Your Honor.

1 Q. (By Mr. Braaten:) Mr. Swenson, can you  
2 talk about any -- you talked earlier about your  
3 experience with safety protocols and industrial  
4 settings. Can you talk about any safety concerns you  
5 have about the applicant's permit requests?

6 A. I can, and I'm not here to talk about the  
7 pipeline that's been given all the attention from a  
8 safety perspective. That's different, you know.  
9 They -- their -- everybody's worked -- worried about  
10 land shifting and the impact of the pipeline faulty  
11 construction, whatever. I just want to make sure that  
12 it's on the record that CO2 is an odorless and  
13 colorless oxygen displacing gas that can be deadly at  
14 certain levels, and just to re-enforce on the record  
15 that North Dakota Century Code 322808 states that  
16 before issuing a permit, the commission shall find  
17 that the storage facility shall not endanger human  
18 health. That's an absolute -- there's no variation  
19 that they provide you. That's an absolute requirement  
20 to not endanger human health. High burden of proof.  
21 Shouldn't be taken lightly. For the protection of  
22 human health. Unfortunately, the applicant has not  
23 submitted any evidence of a potential vapor release  
24 model, concentration gradients of the oxygen robbing  
25 CO2 that may be released, and its potential impact to

1 public receptors into the record. Whether it's from  
2 an unplanned release or one of these little pressure  
3 valves or whatever we talked about yesterday, without  
4 that, how can the state possibly say that they've met  
5 the statutory requirement and that burden, absolute  
6 burden, of finding these disposal facilities shall not  
7 endanger human health. Simply put. You can't. It's  
8 not possible.

9 Q. Do you feel comfortable just trusting that  
10 after the process the Industrial Commission is going  
11 to ensure that there are safety standards at some  
12 point?

13 A. I don't -- I don't know if I do. Probably  
14 not. I'm not sure that I have faith that, you know,  
15 even if the applicant were to have provided basic  
16 concentration gradients from a release with their  
17 application, even if it was under confidential seal  
18 that the state would even know what to do with it as  
19 evidenced by Mr. Helms' e-mail dated January 15th,  
20 2023, addressed to the North Dakota Senate, Energy &  
21 Natural Resources Committee, as those members were  
22 considering numerous bills related to carbon dioxide  
23 pipelines disposal facilities and safety in general  
24 as -- of a CO2 release. In this e-mail, it appears to  
25 be an attempt to share his knowledge and expertise on

1 **modelling and release from a CO2 pipeline.**

2 Q. I'm going to hand you what we have marked  
3 as LO -- as Exhibit LO-89. Mr. Swenson, I've handed  
4 you what we've marked as Exhibit LO-89. Is this a  
5 copy of the e-mail you were just referencing?

6 **A. It is.**

7 Q. And how did you obtain a copy of that  
8 e-mail?

9 **A. From one of the members noted on there,**  
10 **Mr. -- senator Jeffrey Magrum.**

11 MR. BRAATEN: Move to admit LO-89.

12 OFFICER GARNER: Any objections?

13 MR. GLUDT: No objection.

14 OFFICER GARNER: Exhibit is admitted.

15 Q. (By Mr. Braaten:) Did you have a chance to  
16 review the information that was being conveyed to the  
17 legislators by Mr. Helms in this e-mail, Mr. Swenson?

18 **A. I did.**

19 Q. And did you do an assessment of whether you  
20 agreed with whether this was a -- an accurate or  
21 predictive or even relevant model to be using in this  
22 situation?

23 **A. I did. So at this time which was during**  
24 **the 2023 legislative session, as I mentioned before,**  
25 **there were numerous bills going through the**

1 legislator, and as you can see in the way Mr. Helms  
2 introduces this, that it was, you know, carbon dioxide  
3 pipeline information. There was discussion about the  
4 Satartia, Mississippi, pipeline break that occurred  
5 which caused a vapor cloud, and then there was -- and  
6 has been and continues to this day a significant  
7 amount of concern about the vapor concentrations that  
8 were released, and how they impacted the residents of  
9 Satartia, and I'm not here to discuss that, but what I  
10 am here to discuss is that Mr. Helms then under that  
11 pretense of, we're going to talk about vapor  
12 concentrations in an air dispersion model.  
13 Unfortunately, what Mr. Helms did is, he used a risk  
14 management program over pressure model. That's not a  
15 vapor concentration model. It's not an air dispersion  
16 model, as he promotes in his e-mail to our senators,  
17 that were making decisions on bills to protect public  
18 safety. That model is used for regulated substances  
19 and is used to determine offsite consequences to  
20 populations after an explosion, not a vapor release.  
21 But an explosion. So instead of predicting safe  
22 concentrations in the air of vapors, this model  
23 predicts what are called pressure rings from an  
24 explosion and determines a safe distance where the  
25 resulting blast ring is at 1 pound per square inch or

1 less. This can be a very useful tool. I've used this  
2 tool in the refinery explosion scenarios where we  
3 looked at where should we build our maintenance shop  
4 or how thick of concrete walls should we put on a  
5 building where our control room operators were where  
6 they could experience a 5 PSI blast, where a 1 PSI  
7 blast get them. How about the public that's driving  
8 by on the roadway? That's what this model is used  
9 from. And it's very useful in the right application,  
10 and unfortunately, this has zero, zilch, not a thing  
11 to do with carbon dioxide vapor concentrations in air  
12 which may affect human health.

13 I don't know if there was a lack of  
14 critical thinking skills needed to realize that when  
15 the model didn't allow carbon dioxide which is a  
16 nonflammable, i.e., it won't explode chemical  
17 compound. In fact, it's used to put fires out as a  
18 choice. He intentionally chose a different chemical,  
19 carbonyl sulfide. That's not carbon dioxide, but he  
20 does say that in the model that's predicting a whole  
21 separate type of safety risk that CO2 doesn't pose.  
22 How can we possibly trust the state to find that these  
23 storage facilities shall not endanger human health if  
24 they don't even know what model to run? The state  
25 fails miserably on this point.

1 UNIDENTIFIED MALE: Mr. Braaten, I don't  
2 know if this is appropriate at this time, but could  
3 you possibly that -- you could add to LO-89 and  
4 include the e-mail that went to Mr. Helms so we know  
5 what he's responding to?

6 MR. BRAATEN: I don't know what e-mail  
7 you're referring to.

8 MR. GLUDT: It's because it's not on there.

9 UNIDENTIFIED MALE: I mean, that's the  
10 point. This is an e-mail from Mr. Helms to Jeffrey  
11 Magrum.

12 MR. BRAATEN: I don't see anything that  
13 indicates it's a response to anything, particularly an  
14 e-mail.

15 UNIDENTIFIED MALE: Okay. You're probably  
16 right. I thought it was a response to an e-mail.  
17 Maybe I'm wrong.

18 MR. BRAATEN: I don't know.

19 UNIDENTIFIED MALE: Okay. I'm sorry to  
20 interrupt you.

21 OFFICER GARNER: That's okay.

22 THE WITNESS: You know, the sad part is in  
23 addition to using the wrong type of model, they -- in  
24 this permit application process, they don't even ask  
25 for the data on a release scenario. In an open

1 records request to the state, they admit they do not  
2 receive information to evaluate this important topic  
3 on a prior permit application.

4 Q. (By Mr. Braaten:) Can I have you take a  
5 look at landowner or Exhibit LO-90? Mr. Swenson,  
6 we've handed out Exhibit LO-90. Can you tell us what  
7 this exhibit is?

8 A. I can. It is an open records request  
9 submitted January 20th -- or I'm sorry, February 25th  
10 of '24 to the oil and gas open records request e-mail.  
11 Specifically the e-mail asked on those open records  
12 request for all records relating to a carbon dioxide  
13 release to atmosphere from the storage facility and  
14 related equipment including flow lines, compression,  
15 and well bore. That supports the finding that the  
16 commission made that the storage facility will not  
17 endanger human health as required by statute on the  
18 Blue Flint permit that was issued on May 31st of '23.  
19 It asks for the means and method of analysis, the  
20 scenarios model such as releases from any pressure  
21 relief valves, the maximum release, downstream of  
22 compression facilities due to flow line pipe, flange  
23 or valve failure. The weather assumptions for the  
24 scenario such as temperature, humidity, wind speed,  
25 and direction, the name of the software utilized, the

1 name, the employer, the certifications of the North  
2 Dakota professional engineering license of the person  
3 that did the modelling, and the CO2 concentration  
4 level delineation at which the commission determined  
5 is safe for human health, if there is a relief --  
6 release and the geographic topography assumed.

7 Q. And what was the response from the DMR to  
8 that request?

9 A. On February 29th of 2024, a response was  
10 provided. That dispersion models for specific release  
11 scenarios from the storage facility isn't information  
12 that is provided to our office, but it does include an  
13 emergency and remedial response plan which discusses  
14 the necessary actions that the storage operator will  
15 take during a potential emergency event including the  
16 release of carbon dioxide from the storage facility  
17 whether it be from well bore, integrity failure, flow  
18 line leak or other storage equipment.

19 MR. BRAATEN: Move to admit LO-90.

20 OFFICER GARNER: Any objections?

21 MR. GLUDT: Object on relevance,  
22 foundation, and Mr. Koept isn't here to ask -- answer  
23 any questions of ours.

24 OFFICER GARNER: The objections are noted.  
25 The exhibit is admitted.

1 Q. (By Mr. Braaten:) Do you have any concerns  
2 about this response to the record request and the  
3 positions taken by the state regarding human safety?

4 A. Well, obviously, it's important to have an  
5 emergency response and remediation or remedial  
6 response plan, sorry, but that just tells you how  
7 you're going to respond to where the dead bodies are  
8 from a vapor concentration that exceeds the IDLH  
9 standards that our federal government sets. It  
10 doesn't tell you, are you designing the facility  
11 properly. It doesn't tell you what my setback should  
12 be. It just says, here's where the ambulance should  
13 go, and here's who we're going to call to go gurney  
14 out the dead bodies. The applicant did not include in  
15 this hearing process any data with these applications  
16 under consideration for this matter, and the state  
17 presumably has not asked for it. We haven't received  
18 it, and we can't verify this as well as our deposition  
19 requests and discovery requests have been ignored by  
20 the applicant and unenforced by the State of North  
21 Dakota.

22 MR. GLUDT: Objection to that, Your Honor.  
23 The request had not been ignored. There's currently  
24 motions pending, and the applicant intends to respond.

25 OFFICER GARNER: Overruled.

1           THE WITNESS: The state will tell you they  
2 have a setback of 500 feet, and that's highly adequate  
3 as they have used it for oil and gas wells for many  
4 years; yet, what they won't tell you, this setback was  
5 determined from a study of idling diesel trucks that  
6 has nothing to do with a natural gas or crude oil  
7 release, let alone a deadly CO2 vapor hugging the  
8 ground looking for the children playing in our creek  
9 bottom while they're hunting for frogs. For these  
10 safety reasons, these permit applications should be  
11 denied.

12           Q. (By Mr. Braaten:) And in general,  
13 Mr. Swenson, do you believe that the applicant's  
14 request should be approved?

15           A. I think they should be denied. We've been  
16 highly prejudiced due to the lack of adherence due to  
17 North Dakota Rules of Civil Procedure, and the state's  
18 failure to hold the applicant accountable to our  
19 request. And honestly, Mr. Braaten, they're simply  
20 setting themselves up to waste more taxpayer money on  
21 a due process lawsuit pending their decisions made by  
22 the people in this room. On these permits.

23           So as I discussed earlier, the applicant  
24 has refused our depositions and discovery requests.  
25 We have had no information provided from them for us

1 to properly prepare for this hearing. While in bed  
2 with Summit, the state has denied us, as intervenors,  
3 a fair hearing, and our rights of due process  
4 guaranteed in law. While they are asleep at the  
5 wheel, our game clock was run down to 20 percent of  
6 the time remaining, severely prejudicing us with lack  
7 of due process. We put our petition to intervene in  
8 two days after the notice came out, and you wasted  
9 80 percent of our time to prepare by not granting us  
10 our petition to intervene. How is that a fair hearing  
11 process? How is that due process under the state's  
12 procedures?

13 The applicant has testified they  
14 intentionally adjusted model perimeters to reduce the  
15 size of the CO2 plume? Additionally, they  
16 intentionally set the boundaries of the storage  
17 facility smaller than where CO2 will be present. When  
18 they find that the storage facility is too small, the  
19 applicant has testified that they have no plan and  
20 they wouldn't commit yesterday by Mr. Boeshans to even  
21 compensate these new landowners.

22 MR. GLUDT: Objection. Mischaracterization  
23 of Mr. Boeshans' testimony.

24 THE WITNESS: Read the record.

25 OFFICER GARNER: Any response?

1 MR. BRAATEN: The record will speak for  
2 itself. We'll have a transcript.

3 OFFICER GARNER: Overruled.

4 THE WITNESS: For these reasons, the  
5 commission can't possibly find as statutorily required  
6 that pore space owners are compensated equitably  
7 because they don't even know who all the pore space  
8 owners are and that they should be -- who should be  
9 paid, and the applicant has no plans to pay for them.  
10 Let them -- let alone be paid just compensation  
11 guaranteed by our constitution. On this physical  
12 taking of private property, the commission can't  
13 possibly find that these disposal facilities shall not  
14 endanger human health when the applicant hasn't  
15 provided CO2 vapor dispersion modelling from a release  
16 at each of the disposal facilities. They have no idea  
17 how far a major leak will travel, potentially  
18 endangering human health at public receptors.  
19 Hopefully someone in the state can find someone to run  
20 a dispersion model with the correct chemical compounds  
21 and a model that predicts vapor concentrations and not  
22 blast ring pressures. The applicant has failed to  
23 fulfill its obligation of proving the requested  
24 permits are in the public interest.

25 And finally, I'm gravely concerned about

1 the sham of a due process that our state has allowed,  
2 not only has the applicant put forward tremendous  
3 effort to get here today, but North Dakota, the State  
4 of North Dakota has put in tremendous time, resources,  
5 effort, taxpayer monies into laying the framework out  
6 for this industry that could lead to great things for  
7 our North Dakota industries, the workforce economy,  
8 citizens, but unfortunately, due to the state's lack  
9 of action, denial of our due process, as an affected  
10 party, as an intervenor, you're jeopardizing a future  
11 lawsuit that's going to likely end in the EPA removing  
12 North Dakota's primacy for Class 6 injection well  
13 programs. Is this a legacy you want as you go into  
14 retirement? Is this your swan song? I fucking hope  
15 not.

16 UNIDENTIFIED MALE: Whoa.

17 OFFICER GARNER: Whoa.

18 MR. BRAATEN: I don't have any further  
19 questions for this witness at this time.

20 OFFICER GARNER: Okay. We're going to  
21 break here for lunch. Attorney Braaten, I would hope  
22 that on cross examination you can control the witness.

23 MR. BRAATEN: Yes, Your Honor.

24 OFFICER GARNER: We'll break here for  
25 lunch. Off the record.

1                   Okay. We are back on the record, and we  
2 will begin with cross examination of the previous  
3 witness. However, there's been a request for a  
4 statement.

5                   MR. BRAATEN: Yeah. Mr. Swenson would just  
6 like to say something briefly before the cross  
7 examination.

8                   THE WITNESS: Thank you. I'd like to just  
9 apologize to the oil and gas folks that are here and  
10 to -- to you, Mr. Garner, for my choice of words at  
11 the end of my testimony. And any condescending tone  
12 that I had towards individuals. As you can imagine,  
13 this has been a very emotional experience for us,  
14 personally for me, the family that I love and will  
15 protect until the end, our land, and the landowners  
16 that have been affected. So thank you for allowing me  
17 to make this statement.

18                  OFFICER GARNER: Thank you. Attorney  
19 Gludt. You may proceed.

20                  MR. GLUDT: Thank you, Mr. Examiner. We  
21 have no questions.

22                  OFFICER GARNER: Any questions from the  
23 staff?

24                               CROSS EXAMINATION

25 BY UNIDENTIFIED MALE:

1 Q. Kurt, in your experience working for  
2 different industrial companies, do you believe in a  
3 company like Summit can operate this facility safely?

4 A. You know, I've been a part of start-up  
5 companies a couple of times. Like, they have built  
6 businesses in, like, they're trying to build, not  
7 pipeline, I -- I don't know enough about the people in  
8 the company that they're hiring to operate. Thank  
9 you. But I do -- it is possible we did -- we have  
10 done it ourselves, and I think they have every chance  
11 to do it if they put the right people in place, the  
12 right procedures, and design and all that.

13 Q. Okay. Thank you.

14 CROSS EXAMINATION

15 BY MR. HELMS:

16 Q. Kurt, I'm looking at your Exhibit L0-89.  
17 Did you have a conversation with Senator Magrum about  
18 this e-mail?

19 A. As you'll see, Mr. Helms, on the exhibit,  
20 it's dated Monday, June 10th, 2024. So he -- I had  
21 talked with him on Monday. And he had forwarded it to  
22 me on Monday. It wasn't actually -- I had asked him  
23 for some other information, and he sent me this one  
24 that was related, yes. So I did talk with him.

25 Q. And what did he tell you about the context

1 or the -- what initiated the e-mail?

2           A.     What he generally -- and I'm not quoting  
3 him here, but generally, what I was left with was that  
4 it was in regards to the time when there was pipeline  
5 bills being introduced in the legislator and that it  
6 was in relationship to the safety of the pipeline  
7 being proposed in this case by the applicant, and the  
8 Public Service Commission, ultimately, and the rules  
9 that were -- or the senate bills at that time that  
10 were trying to be passed that affected setbacks and  
11 county ability to adopt ordinances or changes that  
12 they desired. So it was kind of in that context,  
13 Mr. Helms. And it was -- it was about, you know, how  
14 far does one have to be to be safe from the pipeline  
15 is the impression that I was left with from that  
16 conversation. But you may have to ask him  
17 specifically, but.

18           Q.     Were you present at the January 15th, 2023  
19 Senate and House Ag & Energy Resources Committee  
20 meeting?

21           A.     I was not at the joint -- the joint one  
22 that we played.

23           Q.     Yes.

24           A.     Video from that one, I was not personally  
25 present. I had watched it in its entirety on the

1 legislative website that allows you to see those  
2 things. But I was not present.

3 Q. Your exhibit LO-63, you indicated that we  
4 could see some white areas, but my copy doesn't show  
5 any white areas. But --

6 A. Is that the -- I'm sorry, is that the map?

7 Q. It's a map.

8 A. Yeah.

9 Q. LO intervenor properties.

10 MR. BRAATEN: It might be a cream color.

11 THE WITNESS: Oh, okay. My vision color  
12 might be slightly off, but we'll take a look here.

13 MR. BRAATEN: I think it's how it printed.

14 THE WITNESS: Oh, that looks different than  
15 the electronic one, slightly, color wise.

16 MR. BRAATEN: Yeah. Let's look at the  
17 difference here. Oh, okay. Yeah.

18 THE WITNESS: So the white areas that I was  
19 referring to, Mr. Helms, if you were to look on the  
20 legend down where it says Swenson --

21 MR. HELMS: Yep.

22 THE WITNESS: -- towards the bottom, that,  
23 in particular, looks white.

24 MR. HELMS: Uh-huh.

25 THE WITNESS: And that's what I was

1 referring to. What -- when the over -- I'm guessing  
2 what happened is, when the overlays went on, it  
3 slightly changed because of the multiple layers. And,  
4 so the areas, if you'd like me to point them out, that  
5 I was referring to, I can.

6 Q. (By Mr. Helms:) Well, either that or  
7 submit a supplement that brings those to the -- to the  
8 front --

9 A. So.

10 Q. Like, the way it is, it isn't useful for  
11 your testimony.

12 MR. BRAATEN: You don't need to say  
13 anything.

14 MR. HELMS: Can you submit it  
15 electronically?

16 MR. BRAATEN: We're not going to submit any  
17 supplements.

18 MR. HELMS: All right.

19 MR. BRAATEN: The legal descriptions for  
20 each intervenor landowner are itemized in declarations  
21 with the deeds attached. Every incumbrance on the  
22 property and the legal description.

23 THE WITNESS: Yeah.

24 MR. HELMS: That's all I got.

25 THE WITNESS: Okay.

1 OFFICER GARNER: Okay. Mr. Braaten, call  
2 your next witness.

3 MR. BRAATEN: I'm not going to call any  
4 more witnesses. I'm not going to rest my case. I  
5 renew my objection to the time table on which this  
6 hearing was held. The lack of notice, the inability  
7 to get information from both the agency and the  
8 applicant, so. I move once again to continue this  
9 hearing until a later date after we have had time to  
10 obtain the data and to prepare for a hearing. And  
11 given that the applicant, apparently, doesn't have a  
12 complete application yet, I think that's going to be  
13 required anyway. So I'm not trying to be difficult,  
14 and I know everybody wants to go home, and I do, too,  
15 so I'm not trying to make people stay here, but I'm  
16 not going to rest. I'm going to put my objection on  
17 record and move to continue.

18 OFFICER GARNER: Your objection is noted,  
19 and your motion is denied. At this time, then, I  
20 think we can move with public comment.

21 UNIDENTIFIED MALE 2: (Inaudible).

22 OFFICER GARNER: Okay. Let's try to keep  
23 this as orderly as possible. Do we have a sign-in  
24 sheet?

25 UNIDENTIFIED MALE 2: (Inaudible) there was

1 one at the table.

2 OFFICER GARNER: Because I can call people  
3 individually. Nothing? Okay. At this point I will  
4 open the floor to anyone that would like to come up  
5 and make a public comment. Okay. I'll note for the  
6 record that no one --

7 UNIDENTIFIED MALE 2: He's coming.

8 OFFICER GARNER: Oh, I'm sorry.

9 KENNETH HENSE: I'm kind of slow.

10 OFFICER GARNER: No. That's fine. Please  
11 state your name for the record.

12 KENNETH HENSE: Kenneth Hemel (phonetic)  
13 Hense.

14 OFFICER GARNER: Okay. You may proceed.

15 KENNETH HENSE: Kenneth Hemel Hense. I'm a  
16 landowner in Oliver County. Would you like the legal  
17 description on my property in Oliver County? Is that  
18 necessary?

19 OFFICER GARNER: Sure.

20 KENNETH HENSE: Okay. So the legal  
21 description on my property is the northeast quarter of  
22 Section 9, 142, 86, in the northeast quarter of  
23 Section 17, 142, 86. As a landowner in Oliver County,  
24 I support the Summit Carbon Solutions project. The  
25 project will provide new industry for North Dakota,

1 supplement income for farmers and ranchers and tax  
2 dollars for the county. I have dealt with them since  
3 2021, and the overall experience has always been very  
4 good and open. Thank you.

5 OFFICER GARNER: Thank you. Anybody else?  
6 Okay. Then before we go off the record, we have a  
7 number of supplementals that we're going to need to  
8 keep the record open for. Attorney Bender and  
9 Braaten, how long do you think you need to keep the  
10 record open?

11 MR. BENDER: I think we can have all the  
12 supplementals into the commission by June 24th.

13 OFFICER GARNER: And one of those includes  
14 an amended storage agreement which is probably going  
15 to require you to work in conjunction. How long --  
16 can you have that in the same time frame?

17 MR. BENDER: Yes. We can have everything  
18 to you by June 24th.

19 OFFICER GARNER: Attorney Braaten.

20 MR. BRAATEN: I presume so.

21 OFFICER GARNER: June 24th. All right.  
22 We'll leave the record open until June 20th -- oh, go  
23 ahead.

24 UNIDENTIFIED MALE: I just want to make  
25 sure you're going to address the written comments --

1 OFFICER GARNER: Oh.

2 UNIDENTIFIED MALE: -- and --

3 OFFICER GARNER: Yes. I did receive two  
4 e-mails, one in support of the application, one in  
5 opposition. I note that the e-mails came in after  
6 5:00 o'clock on Monday, on June 10th. Any objection  
7 to admitting those into the record?

8 MR. BENDER: I don't have any objection,  
9 Your Honor.

10 MR. BRAATEN: No objection, Your Honor.

11 OFFICER GARNER: Then we will admit those  
12 e-mails into the record as well.

13 UNIDENTIFIED MALE: Okay.

14 OFFICER GARNER: Anything further?

15 MR. BENDER: Go ahead.

16 UNIDENTIFIED MALE: There was also the  
17 number of written comments received prior to. I  
18 guess, is there a response from either party to any of  
19 the written comments received prior to the hearing?

20 MR. BENDER: I'm not sure that I understood  
21 what you're saying, I'm sorry.

22 UNIDENTIFIED MALE: Any objection to them  
23 in the record or response to any of the content within  
24 those?

25 MR. BENDER: Well, I don't know. I haven't

1 had an opportunity to review them carefully. Perhaps,  
2 you could leave the record open additionally for  
3 responding to the letters that are coming into the  
4 record until June 24th as well. That's not  
5 inappropriate, Mr. Examiner. That's what we would  
6 propose.

7 OFFICER GARNER: Any problem with that?  
8 Okay. Then we will leave the record open until  
9 June 24th for that purpose as well.

10 MR. BENDER: I don't think you're going to  
11 get a lot of response from us, but it does give us  
12 that opportunity, obviously.

13 OFFICER GARNER: Okay.

14 MR. BENDER: I do have one matter,  
15 Mr. Examiner. This is probably because of my poor  
16 recordkeeping, but I did put together a list of the  
17 exhibits that we discussed. I could give Mr. Braaten  
18 a copy and you a copy as well, and you know, maybe  
19 it's something we can all look over in the next day or  
20 so. And I don't know if Mr. Braaten plans on  
21 providing us with one, and then we can decide if all  
22 the exhibits are in. I don't want a situation where,  
23 you know, we talked about an exhibit, it's clear that  
24 it could be entered, but we forgot to offer it, and it  
25 wasn't admitted. So if Mr. Braaten doesn't have any

1 problem with that, I can provide my list now, and I  
2 don't have any problem with, if Mr. Braaten wants to  
3 provide -- supply his with a copy to me in the next  
4 couple of days so I have an opportunity to respond.

5 MR. BRAATEN: I think that's a great idea.  
6 I agree.

7 OFFICER GARNER: Okay. That's fine.

8 UNIDENTIFIED MALE: I guess to the effect  
9 that there were supplementals requested by commission  
10 staff, are you confident you have a -- a list of the  
11 items that were requested and -- and/or indicated  
12 would be submitted as supplementals?

13 MR. BENDER: I am. But I am prepared to  
14 provide you with a list of what we believe needs to be  
15 supplied. I can submit that to you and copy  
16 Mr. Braaten, and obviously, if you think we missed  
17 something, perhaps, you can just respond in an e-mail,  
18 certainly copy Mr. Braaten.

19 MR. BRAATEN: Yeah. That works for me. I  
20 appreciate that.

21 UNIDENTIFIED MALE: Okay. Thank you.

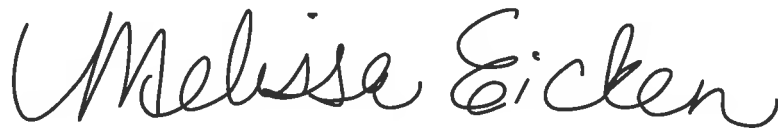

22 OFFICER GARNER: Anything further? Okay.  
23 That concludes our hearings for case numbers 30869  
24 through 30880. It concludes our hearings for the day.

25 (Audio ended.)

## CERTIFICATE OF REPORTER

I, Melissa J. Eicken, Certified Court Reporter of Missouri, Certified Shorthand Reporter of Illinois and Registered Professional Reporter, do hereby certify that I was asked to prepare a transcript of proceedings had in the above-mentioned case, which proceedings were held with no court reporter present utilizing an open microphone system of preserving the record.

I further certify that the foregoing pages constitute a true and accurate reproduction of the proceedings as transcribed by me to the best of my ability and may include inaudible sections or misidentified speakers of said open microphone recording.

Melissa J. Eicken, CCR, CSR, RPR

**Legal June 11 & 12, 2024 Hearing  
NOTICE OF HEARING**

**N.D. INDUSTRIAL COMMISSION**

**OIL AND GAS DIVISION**

The North Dakota Industrial Commission will hold a public hearing at 9:00 AM CDT Tuesday, June 11, 2024 – Wednesday, June 12, 2024 at N.D. Oil & Gas Division 1000 East Calgary Avenue Bismarck, North Dakota. At the hearing the Commission will receive testimony and exhibits. Persons with any interest in the cases listed below, take notice.

**PERSONS WITH DISABILITIES:** If at the hearing you need special facilities or assistance, contact the Oil and Gas Division at 701-328-8038 by Tuesday, May 28, 2024.

**STATE OF NORTH DAKOTA TO:**

Case No. 30869 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #1, LLC requesting consideration for the geologic storage of carbon dioxide in the Broom Creek Formation from the Mid-west Carbon Express Pipeline in the storage facility located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND pursuant to North Dakota Administrative Code Chapter 43-05-01. View the draft storage facility permit, fact sheet, and storage facility permit application at [www.dnr.nd.gov/dnr/oilgas/](http://www.dnr.nd.gov/dnr/oilgas/). Summit Carbon Storage #1, LLC intends to receive carbon dioxide from the Mid-west Carbon Express Pipeline and sequester it in the Broom Creek Formation. The Commission will accept and consider written comments on the merits of the application and draft permit if received no later than 5:00 pm CDT June 10, 2024. Submit written comments to the Oil and Gas Division, 1016 East Calgary Ave, Bismarck, ND 58503-5512 or [siforsberg@nd.gov](mailto:siforsberg@nd.gov). Further draft permit information may be obtained from Tammy Madche, and further hearing information may be obtained from Sara Forsberg, both at the ND Oil and Gas Division, 1016 East Calgary Ave, Bismarck, ND 58503-5512, 701-328-8020. Summit Carbon Storage #1, LLC, 2321 North Loop Dr Suite #221, Ames, IA 50010.

Case No. 30870 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #1, LLC to consider the amalgamation of the storage reservoir pore space, in which the Commission may require that the pore space owned by nonconsenting owners be included in the geologic storage, as required to operate the Summit Carbon Storage #1, LLC storage facility located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13,

13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND, in the Broom Creek Formation, pursuant to North Dakota Century Code Section 38-22-10.

Case No. 30871 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #1, LLC for an order of the Commission determining the amount of financial responsibility for the geologic storage of carbon dioxide from the Midwest Carbon Express Pipeline in the storage facility located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND, in the Broom Creek Formation, pursuant to North Dakota Administrative Code Section 43-05-01-09.1.

Case No. 30872 In the matter of a hearing called on a motion of the Commission to consider establishing the field and pool limits for lands located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND, subject to the application of Summit Carbon Storage #1, LLC for the geologic storage of carbon dioxide in the Broom Creek Formation, and enact such special field rules as may be necessary.

Signed by,

Doug Burgum, Governor

Chairman, NDIC

Persons with any interest in the cases listed below, take notice. **PERSONS WITH DISABILITIES:** If at the hearing you need special facilities or assistance, contact the Oil and Gas Division at 701-328-8038 by Tuesday, May 28, 2024.

## STATE OF NORTH DAKOTA TO:

Case No. 30869 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #1, LLC requesting consideration for the geologic storage of carbon dioxide in the Broom Creek Formation from the Midwest Carbon Express Pipeline in the storage facility located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND pursuant to North Dakota Administrative Code Chapter 43-05-01. View the draft storage facility permit, fact sheet, and storage facility permit application at [www.dmr.nd.gov/dmr/oilgas/](http://www.dmr.nd.gov/dmr/oilgas/). Summit Carbon Storage #1, LLC intends to receive carbon dioxide from the Midwest Carbon Express Pipeline and sequester it in the Broom Creek Formation. The Commission will accept and consider written comments on the merits of the application and draft permit if received no later than 5:00 pm CDT June 10, 2024. Submit written comments to the Oil and Gas Division, 1016 East Calgary Ave, Bismarck, ND 58503-5512 or [siforsberg@nd.gov](mailto:siforsberg@nd.gov). Further draft permit information may be obtained from Tammy Madche, and further hearing information may be obtained from Sara Forsberg, both at the ND Oil and Gas Division, 1016 East Calgary Ave, Bismarck, ND 58503-5512, 701-328-8020. Summit Carbon Storage #1, LLC, 2321 North Loop Dr Suite #221, Ames, IA 50010.

Case No. 30870 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #1, LLC to consider the amalgamation of the storage reservoir pore space, in which the Commission may require that the pore space owned by nonconsenting owners be included in the geologic storage, as required to operate the Summit Carbon Storage #1, LLC storage facility located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND, in the Broom Creek Formation, pursuant to North Dakota Century Code Section 38-22-10.

Case No. 30871 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #1, LLC for an order of the Commission determining the amount

of financial responsibility for the geologic storage of carbon dioxide from the Midwest Carbon Express Pipeline in the storage facility located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND, in the Broom Creek Formation, pursuant to North Dakota Administrative Code Section 43-05-01-09.1.

Case No. 30872 In the matter of a hearing called on a motion of the Commission to consider establishing the field and pool limits for lands located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND, subject to the application of Summit Carbon Storage #1, LLC for the geologic storage of carbon dioxide in the Broom Creek Formation, and enact such special field rules as may be necessary.

Case No. 30873 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #2, LLC requesting consideration for the geologic storage of carbon dioxide in the Broom Creek Formation from the Midwest Carbon Express Pipeline in the storage facility located in Sections 27, 28, 29, 32, 33, 34, and 35, Township 143 North, Range 88 West, Sections 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 32, 33, 34, 35, and 36, Township 142 North, Range 88 West, Sections 5, 6, 7, 8, 17, 18, 19, 20, 29, 30, and 31, Township 142 North, Range 87 West, and Sections 1, 2, and 3, Township 141 North, Range 88 West, Mercer and Oliver Counties, ND pursuant to North Dakota Administrative Code Chapter 43-05-01. View the draft storage facility permit, fact sheet, and storage facility permit application at [www.dmr.nd.gov/dmr/oilgas/](http://www.dmr.nd.gov/dmr/oilgas/). Summit Carbon Storage #2, LLC intends to receive carbon dioxide from the Midwest Carbon Express Pipeline and sequester it in the Broom Creek Formation. The Commission will accept and consider written comments on the merits of the application and draft permit if received no later than 5:00 pm CDT June 10, 2024. Submit written comments to the Oil and Gas Division, 1016 East Calgary Ave, Bismarck, ND 58503-5512 or [siforsberg@nd.gov](mailto:siforsberg@nd.gov). Further draft permit information may be obtained from Tammy Madche, and further hearing information may be obtained from Sara Forsberg, both at the ND Oil and Gas Division, 1016 East Calgary Ave, Bismarck, ND 58503-5512, 701-328-8020. Summit Carbon Storage #2, LLC, 2321 North Loop Dr Suite #221, Ames, IA 50010.

Case No. 30874 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #2, LLC to consider the amalgamation of the storage reservoir pore space, in which the Commission may

require that the pore space owned by nonconsenting owners be included in the geologic storage, as required to operate the Summit Carbon Storage #2, LLC storage facility located in Sections 27, 28, 29, 32, 33, 34, and 35, Township 143 North, Range 88 West, Sections 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 32, 33, 34, 35, and 36, Township 142 North, Range 88 West, Sections 5, 6, 7, 8, 17, 18, 19, 20, 29, 30, and 31, Township 142 North, Range 87 West, and Sections 1, 2, and 3, Township 141 North, Range 88 West, Mercer and Oliver Counties, ND, in the Broom Creek Formation, pursuant to North Dakota Century Code Section 38-22-10.

Case No. 30875 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #2, LLC for an order of the Commission determining the amount of financial responsibility for the geologic storage of carbon dioxide from the Midwest Carbon Express Pipeline in the storage facility located in Sections 27, 28, 29, 32, 33, 34, and 35, Township 143 North, Range 88 West, Sections 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 32, 33, 34, 35, and 36, Township 142 North, Range 88 West, Sections 5, 6, 7, 8, 17, 18, 19, 20, 29, 30, and 31, Township 142 North, Range 87 West, and Sections 1, 2, and 3, Township 141 North, Range 88 West, Mercer and Oliver Counties, ND, in the Broom Creek Formation, pursuant to North Dakota Administrative Code Section 43-05-01-09.1.

Case No. 30876 In the matter of a hearing called on a motion of the Commission to consider establishing the field and pool limits for lands located in Sections 27, 28, 29, 32, 33, 34, and 35, Township 143 North, Range 88 West, Sections 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 32, 33, 34, 35, and 36, Township 142 North, Range 88 West, Sections 5, 6, 7, 8, 17, 18, 19, 20, 29, 30, and 31, Township 142 North, Range 87 West, and Sections 1, 2, and 3, Township 141 North, Range 88 West, Mercer and Oliver Counties, ND, subject to the application of Summit Carbon Storage #2, LLC for the geologic storage of carbon dioxide in the Broom Creek Formation, and enact such special field rules as may be necessary.

Case No. 30877 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #3, LLC requesting consideration for the geologic storage of carbon dioxide in the Broom Creek Formation from the Midwest Carbon Express Pipeline in the storage facility located in Section 36, Township 143 North, Range 87 West, Sections 19, 20, 21, 28, 29, 30, 31, 32, 33, 34, 35, and 36, Township 143 North, Range 86 West, Sections 1, 2, 11, 12, 13, 14, and 24, Township 142 North, Range 87 West, Sections 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 32, 33, 34, and 35, Township 142 North, Range 86 West, and Sections 6, 7, 17, 18, 19, and 20, Township 142 North, Range 85 West, Oliver County, ND pursuant to North Dakota Administrative Code Chapter 43-05-01. View the draft storage facility permit, fact sheet, and storage facility permit application at [www.dmr.nd.gov/dmr/oilgas/](http://www.dmr.nd.gov/dmr/oilgas/). Summit Carbon Storage #3, LLC intends to receive carbon dioxide from the Midwest Carbon Express Pipeline and sequester it in the Broom Creek Formation. The Commission will

accept and consider written comments on the merits of the application and draft permit if received no later than 5:00 pm CDT June 10, 2024. Submit written comments to the Oil and Gas Division, 1016 East Calgary Ave, Bismarck, ND 58503-5512 or [siforsberg@nd.gov](mailto:siforsberg@nd.gov). # NOTICE OF HEARING N.D. INDUSTRIAL COMMISSION OIL AND GAS DIVISION

The North Dakota Industrial Commission will hold a public hearing at 9:00 AM CDT Tuesday, June 11, 2024 - Wednesday, June 12, 2024 at N.D. Oil & Gas Division 1000 East Calgary Avenue Bismarck, North Dakota. At the hearing the Commission will receive testimony and exhibits. Persons with any interest in the cases listed below, take notice.

**PERSONS WITH DISABILITIES.** If at the hearing you need special facilities or assistance, contact the Oil and Gas Division at 701-328-8036 by Tuesday, May 28, 2024.

**STATE OF NORTH DAKOTA TO:** Case No. 30859 in the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #1, LLC requesting consideration for the geologic storage of carbon dioxide in the Broom Creek Formation from the Midwest Carbon Express Pipeline in the storage facility located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND pursuant to North Dakota Administrative Code Chapter 43-05-01. View the draft storage facility permit, fact sheet, and storage facility permit application at [www.dmr.nd.gov/dmr/oilgas](http://www.dmr.nd.gov/dmr/oilgas). Summit Carbon Storage #1, LLC intends to receive carbon dioxide from the Midwest Carbon Express Pipeline and sequester it in the Broom Creek Formation. The Commission will accept and consider written comments on the merits of the application and draft permit if received no later than 5:00 pm CDT June 10, 2024. Submit written comments to the Oil and Gas Division, 1016 East Calgary Ave, Bismarck, ND 58503-5512 or [alfonsberg@nd.gov](mailto:alfonsberg@nd.gov). Further draft permit information may be obtained from Tammy Madche, and further hearing information may be obtained from Sara Forsberg, both at the ND Oil and Gas Division, 1016 East Calgary Ave, Bismarck, ND 58503-5512, 701-328-8020. Summit Carbon Storage #1, LLC, 2321 North Loop Dr Suite #221, Ames, IA 50010.

Case No. 30870 in the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #2, LLC requesting consideration for the geologic storage of carbon dioxide in the Broom Creek Formation from the Midwest Carbon Express Pipeline in the storage facility located in Sections 27, 28, 29, 32, 33, 34, and 35, Township 143 North, Range 86 West, Sections 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND, subject to the application of Summit Carbon Storage #1, LLC for the geologic storage of carbon dioxide in the Broom Creek Formation, and enact such special field rules as may be necessary.

Case No. 30871 in the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #1, LLC for an order of the Commission determining the amount of financial responsibility for the geologic storage of carbon dioxide from the Midwest Carbon Express Pipeline in the storage facility located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND, in the Broom Creek Formation, pursuant to North Dakota Administrative Code Section 43-05-01-09.1.

Case No. 30872 in the matter of a hearing called on a motion of the Commission to consider establishing the field and pool limits for lands located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND, subject to the application of Summit Carbon Storage #1, LLC for the geologic storage of carbon dioxide in the Broom Creek Formation, and enact such special field rules as may be necessary.

Case No. 30873 in the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #2, LLC for an order of the Commission determining the amount of financial responsibility for the geologic storage of carbon dioxide from the Midwest Carbon Express Pipeline in the storage facility located in Sections 27, 28, 29, 32, 33, 34, and 35, Township 143 North, Range 86 West, Sections 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND, in the Broom Creek Formation, pursuant to North Dakota Administrative Code Section 43-05-01-09.1.

Case No. 30874 in the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #2, LLC to consider the amalgamation of the storage reservoir pore space, in which the Commission may require that the pore space owned by nonconsenting owners be included in the geologic storage, as required to operate the Summit Carbon Storage #2, LLC storage facility located in Sections 27, 28, 29, 32, 33, 34, and 35, Township 143 North, Range 86 West, Sections 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND, subject to the application of Summit Carbon Storage #1, LLC for the geologic storage of carbon dioxide in the Broom Creek Formation, and enact such special field rules as may be necessary.

### NOTICE OF HEARING

#### N D INDUSTRIAL COMMISSION OIL AND GAS DIVISION

The North Dakota Industrial Commission will hold a public hearing at 9:00 AM CDT Tuesday, June 11, 2024 - Wednesday, June 12, 2024 at N D Oil & Gas Division 1000 East Calgary Avenue Bismarck, North Dakota. At the hearing the Commission will receive testimony and exhibits Persons with any interest in the cases listed below, take notice

PERSONS WITH DISABILITIES: If at the hearing you need special facilities or assistance, contact the Oil and Gas Division at 701-328-8038 by Tuesday, May 28, 2024.

#### STATE OF NORTH DAKOTA TO:

Case No. 30869 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #1, LLC requesting consideration for the geologic storage of carbon dioxide in the Broom Creek Formation from the Midwest Carbon Express Pipeline in the storage facility located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND pursuant to North Dakota Administrative Code Chapter 43-05-01. View the draft storage facility permit, fact sheet, and storage facility permit application at [www.dmr.nd.gov/dmr/oilgas/](http://www.dmr.nd.gov/dmr/oilgas/). Summit Carbon Storage #1, LLC intends to receive carbon dioxide from the Midwest Carbon Express Pipeline and sequester it in the Broom Creek Formation. The Commission will accept and consider written comments on the merits of the application and draft permit if received no later than 5:00 pm CDT June 10, 2024. Submit written comments to the Oil and Gas Division, 1016 East Calgary Ave, Bismarck, ND 58503-5512 or [sforsberg@nd.gov](mailto:sforsberg@nd.gov). Further draft permit information may be obtained from Tammy Macche, and further hearing information may be obtained from Sara Forsberg, both at the ND Oil and Gas Division, 1016 East Calgary Ave, Bismarck, ND 58503-5512, 701-328-8020. Summit Carbon Storage #1, LLC, 2321 North Loop Dr Suite #221, Ames, IA 50010.

Case No. 30870 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #1, LLC to consider the amalgamation of the storage reservoir pore space, in which the Commission may require that the pore space owned by non-consenting owners be included in the geologic storage, as required to operate the Summit Carbon Storage #1, LLC storage facility located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND in the Broom Creek Formation, pursuant to North Dakota Century Code

Case No. 30871 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #1, LLC for an order of the Commission determining the amount of financial responsibility for the geologic storage of carbon dioxide from the Midwest Carbon Express Pipeline in the storage facility located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND in the Broom Creek Formation, pursuant to North Dakota Administrative Code Section 43-05-01-09.1

Case No. 30872 In the matter of a hearing called on a motion of the Commission to consider establishing the field and pool limits for lands located in Sections 31, 32, 33, and 34, Township 142 North, Range 87 West, Sections 1, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 35, and 36, Township 141 North, Range 88 West, Sections 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, Township 141 North, Range 87 West, Sections 1, 2, 3, and 12, Township 140 North, Range 88 West and Sections 4, 5, 6, and 7, Township 140 North, Range 87 West, Mercer, Morton, and Oliver Counties, ND, subject to the application of Summit Carbon Storage #1, LLC for the geologic storage of carbon dioxide in the Broom Creek Formation, and enact such special field rules as may be necessary

Case No. 30873 In the matter of a hearing called on a motion of the Commission to consider the application of Summit Carbon Storage #2, LLC requesting consideration for the geologic storage of carbon dioxide in the Broom Creek Formation from the Midwest Carbon Express Pipeline in the storage facility located in Sections 27, 28, 29, 32, 33, 34, and 35, Township 143 North, Range 88 West, Sections 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 32, 33, 34, 35, and 36, Township 142 North, Range 88 West, Sections 5, 6, 7, 8, 17, 18, 19, 20, 29, 30, and 31, Township 142 North, Range 87 West, and Sections 1, 2, and 3, Township 141 North, Range 88 West, Mercer and Oliver Counties, ND pursuant to North Dakota Administrative Code Chapter 43-05-01. View the draft storage facility permit, fact sheet, and storage facility permit application at [www.dmr.nd.gov/dmr/oilgas/](http://www.dmr.nd.gov/dmr/oilgas/). Summit Carbon Storage #2, LLC intends to receive carbon dioxide from the Midwest Carbon Express Pipeline and sequester it in the Broom Creek Formation. The Commission will accept and consider written comments on the merits of the application and draft permit if received no later than 5:00 pm CDT June 10, 2024. Submit written comments to the Oil and Gas Division, 1016 East Calgary Ave, Bismarck, ND 58503-5512 or [sforsberg@nd.gov](mailto:sforsberg@nd.gov).
