

Guide to Creating Plugging Procedures in NorthSTAR

V.01 02.06.2020

How to Get Started

- Log into NorthSTAR using Microsoft Edge, Google Chrome, or Firefox.
URL: <https://northstar.dmr.nd.gov>

To begin a sundry for the intent to plug & abandon a well:

- Select **[Forms]** and **[Online Forms]** from the options at the top of the page.
- Select **[Well Completion or Plugging Report]**.
- Select your organization from the *Organization* list.
- Select **[Plugging]** for both *Form Type* and *Type of Completion*.
- Select the **[API Number]** for the well that was plugged. Check to make sure the well name & file no. that populate are correct.

Well Information

Users must fill out all applicable fields.

- If the well is currently part of a unitized field, select the *Unit* from the list.
- Select the *Field* from the list.
- Select the 'active' production / injection pool for the well from the list.

- For a plugged well, the *Operator Reported Status* will be *[Shut In]*.
- The *Spud / Start Date* is the date the plug & abandon work began.
- The *Date Completed* is the date the plug & abandon work was completed.
- The *KB Elevation (Ft Above SL)* is the reference elevation above sea level used for logging.

- An oil well shall be considered completed when the first oil is produced through wellhead equipment into tanks from the ultimate producing interval after casing has been run.
- A gas well shall be considered complete when the well is capable of producing gas through wellhead equipment from the ultimate producing zone after casing has been run.
- For EOR or SWD wells, please report the date the well is capable of injection through tubing and packer into the permitted injection zone. Also, please report the packer type and depth and the tubing size, depth, and type. The packer and tubing type may be included in the "Additional Information" portion of the report.

Size & Type of Pump

Geological Information

Users must select all logs that were run on the well prior to or during plugging & abandon operations.

- *Deepest Formation Penetrated* is the deepest formation reached while drilling the well. This may not be related to the deepest casing string or the current production interval.
- Select the logs from the table provided near the top of the screen by marking the check box in the left-hand column.
- Press the [V] button to move the log types that were marked into the table below.
- To add additional logs of the same type (e.g. two separate cement bond logs), repeat the instructions above for that specific log type until the correct number show up in the table below.
- If a log was mistakenly added to the list, select the log using the checkbox and press the [^] to remove it from the list.
- Specify any other logs that were not found in the list under the *Other Logs* section

Plugging

Users must fill out all applicable fields on this form.

- *Weight of Fluid Between Plugs* is, in general, the weight of fluid that was circulated in the wellbore prior to cementing. This field must contain a single numeric value. If different fluids were circulated in the wellbore during P&A operations, note the first weight in this field and all subsequent weights under *Comments* below.
- *Date Well Plugged* is the date P&A operations were completed.
- *Number of DSTs* is the total number of drill stem tests run on the well (during initial drilling or recompletion).
- *Directional Survey Run?* indicates whether there are one or more sets of surveys for the well (e.g. MWD, GYRO, etc).
- *Was Completion Attempted?* indicates whether a well was fully or partially completed (e.g. hydraulic fracturing, formation acid treatment, etc).
- *Was the Well Cored?* Indicates whether core samples were taken from the well.
- *Was Casing Pulled?* Indicates whether one or more casing strings have been completely or partially pulled throughout the lifespan of the well.
- *Depth of Interval(s) Cored (Top-Bottom)* are the depths at which core samples were retrieved. Type *[N/A]* if no coring was done. Type each interval starting with the depth of the top of core, and separate core sample intervals with a comma (e.g. 7600-7645ft, 8235-8280ft), the core section on the geology information section will also need to be filled out.
- *Name of Inspector Present During Plugging* is the name of the ND DMR or BLM field inspector that witnessed cement work during P&A operations.
- List all pertinent *Plugging Contractors*. At a minimum include the workover company, cement company, and wireline company.
- Any additional information can be added to the comment box. Features in the wellbore, cement plug information, and procedures will be added in subsequent sections.

Features & Cement – The Basics

Some information about the wellbore will already be populated in the tables. If a piece of information appears to be inaccurate, please review the well file prior to making any changes. If changes are made to an item, all required fields must be completed.

Table Descriptions:

- Wellbore Information lists the openhole record of the wellbore. Missing or inaccurate records will require additional paperwork to update.
- Wellbore Construction Feature itemizes the objects inside the wellbore. **Features** may also be proposed on the sundry. Missing **Features** may be added here.
- Cement Segment is a description of the cement inside and behind casing. **Cement segments** may also be proposed on the sundry. **Cement Segments** must have an **Associated Feature**. Missing **Cement Segments** may be added here.
- Cement Class is a description of the cement from the **Cement Segments** table. The cement class must have an associated **Cement Segment**. Missing **Cement Class** information may be added here.

The tables may be formatted to a better size using the [\[Hide Form Navigation\]](#) button.

Information may be added to each table by clicking on [\[Actions\]](#) at the top of the table and selecting [\[Add New\]](#).

Information regarding a **Feature, Cement Segment, Cement Class, Completion Interval, or Completion Open Hole or Perforations** may be edited by clicking [\[Actions\]](#) for the specific item and [\[Edit Record\]](#).

Items added by the user on this sundry will have a **New Record Status**. These items may also be deleted by the user by clicking on [\[Actions\]](#) for the specific item and selecting [\[Delete Record\]](#).

IF THE FEATURES FOR THE P&A WERE ALREADY PROPOSED IN NORTHSTAR, SKIP TO SECTION B.

IF THE FEATURES FOR THE P&A ARE NOT IN NORTHSTAR, FOLLOW THE INSTRUCTIONS IN SECTION A.

SECTION A – Wellbore Diagram for Example

SECTION A (Example)

Features & Cement – Adding a Cement Squeeze for Existing Perforations

In this example, a cement retainer was set above a fish in the wellbore. A cement squeeze was performed on the production perforations below the fish.

Features for a cement squeeze may include: Cast Iron Bridge Plug, Perforations, Cement Squeeze, Cement Retainer.

In order to add a cement squeeze, select **[Actions]** and **[Add Feature]**:

- Add **[Fish]**, **[Cement Retainer]**, and **[Cement Squeeze]** **Features**.
- **Construction Status** will be **[Installed]**.
- **Wellbore Start** and **Wellbore End** will be **[VerticalHole1]** if the item is inside the vertical section of the wellbore below the **SurfaceHole1** depth.
- **Feature Bottom MD (ft)** will be bottom of tool for the **Cement Retainer** and lowest perforation depth for the **Cement Squeeze**.
- **Feature Top MD (ft)** will be the proposed top of tool for the **Cement Retainer** and top of cement for the **Cement Squeeze**. 10skcs cement left 86ft of cement on top of the **Cement Retainer**.
- **Install Date** is the date the tool was set or cement work was completed.
- **Formation Isolated** is the formation that was isolated by the cement squeeze.

Features & Cement – Adding a Cast Iron Bridge Plug and Balanced Plug

In this example, a cast iron bridge plug was set, and a cement balanced plug was pumped on top of the plug.

Features for balanced plugs may include: Cast Iron Bridge Plug, Cement Retainer & Balanced Plug.

In order to add the balanced plug features, for each feature select *[Actions]* and *[Add Feature]*:

- Add *[Cast Iron Bridge Plug]* and *[Balanced Plug]* **Features**.
- **Construction Status** will be *[Installed]*.
- **Wellbore Start** and **Wellbore End** will be *[VerticalHole1]* if the item is inside the vertical section of the wellbore below the **SurfaceHole1** depth.
- **Feature Bottom MD (ft)** will be:
 - The depth of the bottom of tool for the *Cast Iron Bridge Plug*.
 - The end of tubing for the *Balanced Plug*.
- **Feature Top MD (ft)** will be:
 - The top of tool for the *Cast Iron Bridge Plug*
 - The calculated cement top for the *Balanced Plug*. If the height of the *Balanced Plug* was verified (e.g. by tagging), the top of the plug is the depth that was verified.
- **Install Date** is the date the tool was set or cement work was completed.
- **Formation Isolated** is the formation isolated by the balanced plug.

Features & Cement – Adding a Failed Cement Squeeze Attempt

In this example, the cement squeeze was unable to be performed. A cast iron bridge plug was set, the casing was perforated, a cement retainer was set, and a cement balanced plug was placed on top of the cement retainer.

Features for cement squeezes may include: Cast Iron Bridge Plug, Cement Retainer, Cement Squeeze, and Perforations. A

In order to add cement squeeze and balanced plug features, for each feature select **[Actions]** for the table and **[Add Feature]**:

- Add **[Cast Iron Bridge Plug]**, **[Perforations]**, **[Cement Retainer]**, and **[Balanced Plug] Features**.
- **Wellbore Start** and **Wellbore End** will be **[VerticalHole1]** if the item is inside the vertical section of the wellbore below the **SurfaceHole1** depth.
- **Feature Bottom MD (ft)** will be:
 - The depth of the bottom of tools for the *Cast Iron Bridge Plug & Cement Retainer*
 - The bottom of the perforated interval for *Perforations*
 - The end of tubing for the *Balanced Plug*.
- **Feature Top MD (ft)** will be:
 - The top of tool for the *Cast Iron Bridge Plug & Cement Retainer*
 - The top of the perforated interval for *Perforations*
 - The calculated cement top for the *Balanced Plug*. If the height of the *Balanced Plug* was verified (e.g. by tagging), the top of the plug is the depth that was verified.
- **Install Date** is the date the tool was set or cement work was completed.
- **Formation Isolated** is the formation isolated by the balanced plug.

Features & Cement – Adding a Cement Squeeze Performed Due to Insufficient Top of Cement

In this example a cement squeeze is performed below the surface shoe. A cast iron bridge plug was set, the casing was perforated, a cement retainer was set, and a cement squeeze was performed.

Features for cement squeezes may include: Cast Iron Bridge Plug, Cement Retainer, Cement Squeeze, and Perforations.

In order to add proposed cement squeeze features, for each feature select **[Actions]** for the table and **[Add Feature]**:

- Add **[Cast Iron Bridge Plug]**, **[Perforations]**, **[Cement Retainer]**, and **[Cement Squeeze] Features**.
- **Construction Status** will be **[Not Installed]**.
- **Wellbore Start** and **Wellbore End** will be **[VerticalHole1]** or **[SurfaceHole1]** depending on whether the *Feature* starts or ends above or below the **SurfaceHole1** depth.
- **Feature Bottom MD (ft)** and **Feature Top MD (ft)** will be the proposed bottom and top of the *Feature*.
- **Install Date** is the date the tool was set or cement work was completed.
- **Formation Isolated** is the formation isolated by the balanced plug.

SECTION A (Example)

Features & Cement – Adding a Surface Plug

Features for surface plugs may include: Perforation, Cut, Cut and Pull, and Surface Plug.

In order to add the surface plug features, for each **Feature** select **[Actions]** and **[Add Feature]**:

- Add **[Perforation]** and **[Surface Plug] Features**.
- **Construction Status** will be **[Installed]**.
- **Wellbore Start** and **Wellbore End** will be **[SurfaceHole1]** because the items are above the **SurfaceHole1** depth.
- **Feature Bottom MD (ft)** and **Feature Top MD (ft)** will be the proposed bottom and top of the **Feature**.

Features & Cement – Adding Cement Segments

Cement Segments must have an associated **Feature** from the **Wellbore Construction Feature** table.

To add **Cement Segments**, for each **Segment** select **[Actions]** and **[Add Cement Segment]**:

- For cement squeezes on production / injection intervals or balanced plugs, select **[Inside]** for **Inside / Outside Casing?**
- For cement squeezes due to inadequate casing cement (where cement was squeezed inside and behind casing), select **[N/A]** for **Inside / Outside Casing?**
- The **Top** and **Bottom** of the **Cement Segment** will be the same depths as the **Associated Features**.
- Details about a multi-stage cement job can be accounted for in the **Cement Classes** section.

Features & Cement – Adding Cement Classes

Cement Classes must have an associated **Cement Segment** from the **Cement Segment** table.

To add **Cement Classes** select **[Actions]** and **[Add Cement Segment]**:

- Select the **[Associated Cement Segment]** from the list.
- Select the **[Cement Type]** from the list.
- Add all other pertinent information about the **Cement Segment** in the spaces provided.
- Multiple **Cement Classes** (e.g. stages) can be associated with a single **Cement Segment**. An example of this is choosing a lead and tail **Cement Class** for a single **Cement Segment**.

Cement Class Unique ID	Associated Cement Segment	Install Status	Record Status	Compressive Strength (psi)	Weight (lbs/gal)	Slurry Consistency (Bu)	Lead/Tail

SECTION B

Editing Proposed Wellbore Features, Cement Segments, and Cement Classes

If all of the Features, Cement Segments, and Cement Classes were proposed on the sundry for the intent to plug & abandon the wellbore, the information will be populated in the plugging report.

Items may be added by selecting *[Actions]* and *[Add...]* from the appropriate table.

To edit an existing item, select *[Actions]* and *[Edit...]* for the item.

- All **Construction Statuses** for items that were installed need to be changed to *[Installed]*.
- All **Construction Statuses** for items that were not installed should remain as *[Not Installed]*.
- Any wellbore features added or discovered while conducting work should be added. These may include: fish, collapsed casing, fill, hole, internal casing patch, milled casing, other damage, oval damage, parted casing, split casing, and tight spot in casing.

Use the examples in Section A to fill out all required items and information.

Lists from the following dropdowns are provided in the Appendix (these options may be subject to change):

- Wellbore Information: Wellbore Type
- Wellbore Construction Feature: Feature
- Cement Class: Cement Type

Data being entered in NorthSTAR has a similar layout to the Form 7 – Plugging Reports.

Sundry Data – Adding a P&A Procedure

P&A procedures may be entered into the *Sundry Description* area. *Sundry Descriptions* are limited to 2000 characters. P&A procedures may also be attached as a document (explained in the next section).

- Procedures may be typed into the *Sundry Description* area.

- Procedures may be copied from another document and pasted into the *Sundry Description* area.

Sundry Description

1. Do One-Call prior to going to well. Notify NDIC 24 hours prior to commencing work. (Jon Rumppe@ 701-XXX-XXXX).
2. Prepare location for workover. MIRU pulling unit. Discuss scope of work to be performed at this time.
3. Dig out surface casing valve and bleed off.
4. Bleed off well through hot oil truck.
5. ND wellhead. NU BOP.
6. Trip in hole with 2 7/8" workstring, bit and scraper for 7" casing to ±8,050' (Cement retainer). Circulate well with clean, 10 ppg SW. Trip out of hole with tubing, bit, and scraper.
7. Rig up wireline unit. Run cement bond log from 8,050' to Top of Cement. Trip out of hole and rig down wireline unit.
8. Trip in hole with workstring and sling into retainer. Establish injection rate. Rig up cement equipment. Mix and pump 100 sks Class G cement. Squeeze 90 sks into formation and leave 10sks on CICR. Rig down cement equipment.
 - a. If unable to establish injection rate, spot 45sks class G cement on top of CICR.

Document Upload

Documents related to the sundry should be uploaded here. Documents will be available for download by any users that have permission to review the sundry.

Typical documents to include are a P&A procedure and current wellbore schematic (both required under NDAC 43-02-03-33).

To upload a document, select **[Actions]** and **[Add New]**:

- Select the *Type* of document from the dropdown menu (**[Diagram]**, **[Plugging Procedure]**, or **[Sundry Attachment]**).
- The *Relevant Date* in this case is the date the document is uploaded.
- Enter a brief *Description* of the document (e.g. 'Current Wellbore Diagram', 'Proposed P&A Diagram', 'P&A Procedure', etc).

Documents uploaded by the user may also be deleted by selecting **[Actions]** and **[Remove Document]**.

Form Submit – Comments, Acknowledgement, and Final Review

Users may add comments to the sundry and read reviewers' comments in the Comments section.

Users must eSign the sundry by clicking on the checkbox under the Acknowledgement subform.

Users may review the entire sundry by clicking on the *[Preview Submission Summary]* button.

By clicking on the *[Next]* button from this page, the user will submit the sundry. The user will not be able to file a sundry that has missing information in required fields.
