2020 Public Fossil Dig - Pembina Gorge

-This dig is co-sponsored by the North Dakota Geological Survey, and the North Dakota Parks and Recreation Department. We will be returning once again to the beautifully scenic Pembina Gorge in our ongoing search for sea monsters. This Pierre Formation location, 80 million years old, holds some of the oldest surface rocks in North Dakota. This was a time when North Dakota was covered with the Western Interior Seaway, and was home to great swimming reptiles called mosasaurs, giant squid, sea turtles, aquatic birds, large (and small) fish, snails, clams, and more.

-When: Full Days: August 7, 9-14
  Family Half Days: August 8, 15 (AM & PM)
  Adult Half Days: August 16 (AM)

-Where: Near Walhalla, Cavalier County

-NEW for 2020: This year, the Pembina dig will NOT include a souvenir - because of this, you will need to bring a reusable waterbottle along with for use throughout the day. If you still want a souvenir for the dig, at the end of the dig season we will be holding our t-shirt campaign with the new 2020 design! Breakfast will NOT be included this year. Morning and afternoon sessions of Half-Days will both receive lunch at the site. Prices have been adjusted to reflect this.

Registration: Saturday February 1st, 10am Central
