References:

This series of maps of the Crosby 100K Sheet was based on public data from 225 wells gathered by the North Dakota Industrial Commission, Department of Mineral Resources, Oil & Gas Division. The White Lake Member of the Prairie Formation in Saskatchewan: Journal of

Nelson, P.H., 2007, Evaluation of potash grade with gamma-ray

All calculations were based on gamma-ray log measurements recorded in API units taken at six-inch increments throughout the potash-containing portion of the log. The isopach maps were generated via the log peaks separated by troughs representing salt or anhydrite. Corrections for borehole size and drilling mud increments throughout the potash-containing portion of the log. Corrections for borehole size and drilling mud

K₂O Grades of the White Lake Member of the Prairie Formation

Crosby 100K Sheet, North Dakota

All calculations were based on gamma-ray log measurements recorded in API units taken at six-inch increments throughout the potash-containing portion of the log. The isopach maps were generated via the log peaks separated by troughs representing salt or anhydrite. Corrections for borehole size and drilling mud increments throughout the potash-containing portion of the log. Corrections for borehole size and drilling mud
