 Geology Undifferentiated

QUATERNARY SYSTEM

RECENT/PLEISTOCENE

 Qls Landslide Deposits

A mass of material that has moved downslope. Includes earth flows, slumps, and areas of soil creep.

Landslides identified on this quadrangle were mapped from stereo pairs, black and white 1:20,000 scale aerial photographs flown in June to September 1958 by the United States Department of Agriculture (USDA). Additional data sources include digital orthophotography from the USDA National Agriculture Imagery Program (NAIP) flown in August 2024 and the North Dakota Geological Survey LiDAR Map Series, which compiles raw data flown in October 2021 to May 2024 from the North Dakota State Water Commission. Landslide mapping originally completed by Murphy in 2004 has been updated on this map after reviewing recently published LiDAR elevation data and contemporary imagery.
